# What is the Reason to Trust on AACN CCRN-Pediatric Exam Questions?

#### CCRN Pediatric Exam Questions And Answers from AACN

To promote effective grieving in a 6-year-old sibling following the death of an infant, the purse should:

- A) Recommend that the sibling not attend the infant's memorial service
- B) Encourage the parents to minimize their expression of grief with the sibling
- C) Explain to the sibling that the infant went to heaven

D) Explain to the sibling that thoughts and wishes did not cause the infant's death -AnsworAnswor: D) Explain to the sibling that thoughts and wishes did not cause the infant's death: At age 6, children may take words literally and because of their egocentrism, they believe that thoughts are all-powerful. They may truly believe they caused the death of their sibling. A simple, honest explanation of why the sibling died is indicated. This intervention is consistent with Caring Processes.

A) Recommend that the sibling not attend the infant's memorial service: This intervention is not a solution to the problem and will not promote effective grieving for the sibling. It is not consistent with Caring Processes.

- B) Encourage the parents to minimize their expression of grief with the sibling: This intervention will lead to ineffective grieving for the sibling and is not consistent with Carling Processos
- C) Explain to the sibling that the infant went to heaven: This intervention will not address the sibling's problem

A 5-year-old with a history of congenital hydrocephalus and VP shunt placement at four weeks of age is admitted with increased somnolence, decreased appetite, and increased complaints of headache. This morning the child vemited twice. The nurse should anticipate:

- A) The physician ordering lumbar puncture and blood and urine cultures
- B) the patient having a CT scan followed by possible shunt revision
- C) Administering mannitol or hypertonic saline

D) Administering phenytoin (Dilantin) or fosphenytoin (Cerebyx) - AnswerAnswer: B) The patient having a CT scan followed by possible shunt revision: This patient is demonstrating signs of increased intracranial pressure. The most likely etiology is malfunction of the VP shunt as a result of blockage or disconnection, which is

# AACN Critical Care Nursing Exam Sample Questions (Q148-Q153):

#### **NEW QUESTION # 148**

While ventilating with 100% FiO# via Ambu bag, an intubated child desaturates. Breath sounds are decreased in all fields. What is the best action?

- A. Obtain a chest x-ray and ABG
- B. Administer a bronchodilator
- C. Continue ventilating with Ambu bag
- D. Extubate and bag-mask ventilate

#### Answer: A

## **NEW QUESTION # 149**

A patient on prolonged mechanical ventilation and in an unresponsive state is showing no signs of progression toward recovery. The healthcare team suggested a comfort care approach. Family members are conflicted. Which of the following should the nurse suggest as the next course of action?

- A. A meeting with the institutional ethics committee to examine the case
- B. A hospice consult to prepare the family for end-of-life care
- C. A palliative care consult to assist with symptom management
- D. A meeting with the family to discuss the issue and options

#### Answer: A

#### Explanation:

When ethical dilemmas arise and the family is conflicted despite medical consensus, the institutional ethics committee should be involved to guide decision-making through astructured, neutral process.

"When disagreement persists about life-sustaining treatment, referral to the institutional ethics committee is recommended to facilitate discussion, evaluate values, and support consensus-building among the care team and family." (Referenced from CCRN Pediatric - Professional Caring and Ethical Practice: Ethical Decision-Making and End-of-Life Care) While palliative care supports symptom relief, theethics committee is the appropriate avenue for addressing decisional conflictregarding the care plan.

#### **NEW OUESTION #150**

A 6-year-old with WPW syndrome and SVT episodes is admitted. What intervention is anticipated?

- A. Placement of an automatic internal cardioverter defibrillator
- B. Cardiac catheterization for ablation
- C. Administration of a digitalizing dose of digoxin
- D. 24-hour Holter monitoring

#### Answer: B

#### Explanation:

Wolff-Parkinson-White (WPW)syndrome involves anaccessory conduction pathwaycausingreentrant tachycardias. Catheter ablationis the definitive treatment, especially in symptomatic children. Digoxin is contraindicated in WPW as it may enhance conduction through the accessory pathway.

"Catheter ablation is the treatment of choice for recurrent or refractory supraventricular tachycardia in WPW. Digoxin should be avoided in pre-excitation syndromes." (Referenced from CCRN Pediatric - Direct Care: Cardiovascular, Supraventricular Tachycardia and WPW Management)

#### **NEW QUESTION #151**

A 2 year old was brought to the pediatric clinic for a routine check up. When assessing the child's relationship with other children, the nurse would expect to observe.

- A. initiative play
- B. cooperative play
- C. team play
- D. parallel play

#### Answer: D

#### Explanation:

Explanation: Parallel play is typical of the toddler age group. They have not yet learned to interact with other toddler in a social situation. Initiative play does not identify any age group; moreover, it is not a recognized term for social play.

#### **NEW QUESTION #152**

Proper documentation is one role of a nurse. How would a nurse document a clonic episode in a pediatric client with seizure disorder:

- A. a loss of consciousness
- B. a generalized rigidity
- C. tremors of the extremities.
- D. is spasmodic jerking of the entire body.

#### Answer: D

## Explanation:

Explanation: Usually, a clonic episode leads to spasmodic jerking of the entire body. Clonus is a rapid rhythmic extension and relaxation of groups of muscles throughout the body. During tonic phase, generalized rigidity happens.

#### **NEW QUESTION #153**
