Exam FCP_FCT_AD-7.4 Success - Realistic Quiz 2026 Fortinet FCP - FortiClient EMS 7.4 Administrator Latest Test Dumps

There are many other advantages. To gain a full understanding of our product please firstly look at the introduction of the features and the functions of our FCP_FCT_AD-7.4 exam torrent. The page of our product provide the demo and the aim to provide the demo is to let the you understand part of our titles before their purchase and see what form the software is after the you open it. The client can visit the page of our product on the website. So the client can understand our FCP_FCT_AD-7.4 Quiz torrent well and decide whether to buy our product or not at their wishes. The client can see the forms of the answers and the titles.

Fortinet FCP - FortiClient EMS 7.4 Administrator Sample Questions (Q25-Q30):

NEW QUESTION # 25

Which component or device defines ZTNA lag information in the Security Fabric integration?

- A. FortiClient EMS
- B. FortiClient
- C. FortiGate
- D. FortiGate Access Proxy

Answer: A

Explanation:

* Understanding ZTNA:

* Zero Trust Network Access (ZTNA) requires defining tags for identifying and managing endpoint access.

* Evaluating Components:

* FortiClient EMS is responsible for managing and defining ZTNA tag information within the Security Fabric.

* Conclusion:

* The correct component that defines ZTNA tag information in the Security Fabric integration is FortiClient EMS.

References:

ZTNA and FortiClient EMS configuration documentation from the study guides.

NEW QUESTION # 26

An administrator needs to connect FortiClient EMS as a fabric connector to FortiGate. What is the prerequisite to get FortiClient EMS to connect to FortiGate successfully?

- A. Revoke and update the FortiClient client certificate on EMS.
- B. Import and verify the FortiClient client certificate on FortiGate.
- **C. Import and verify the FortiClient EMS tool CA certificate on FortiGate.**
- D. Revoke and update the FortiClient EMS root CA.

Answer: C

Explanation:

* Connecting FortiClient EMS to FortiGate:

* The administrator needs to establish a connection between FortiClient EMS and FortiGate as a fabric connector.

* Prerequisites for Connection:

* A key prerequisite is the import and verification of the FortiClient EMS tool CA certificate on FortiGate to ensure a trusted connection.

* Conclusion:

* The correct prerequisite for a successful connection is to import and verify the FortiClient EMS tool CA certificate on FortiGate.

References:

FortiClient EMS and FortiGate connection and certificate management documentation from the study guides.

NEW QUESTION # 27

Which two statements about FortiClient EMS integration with Active Directory (AD) are true? (Choose two answers)

- A. FortiClient EMS has full read-write access on the AD server.
- **B. FortiClient installations on domain endpoints can be deployed from FortiClient EMS.**
- **C. Endpoint profiles can be assigned to endpoints based on domain groups.**
- D. Imported AD endpoints cannot be directly deleted on FortiClient EMS

Answer: B,C

Explanation:

Based on the FortiClient EMS 7.2/7.4 Administration Guide and the EMS Administrator Study Guide, the integration with Active Directory (AD) provides several automated management capabilities.

1. Analysis of the True Statements:

* B. FortiClient installations on domain endpoints can be deployed from FortiClient EMS:

* FortiClient EMS allows administrators to create Deployment Profiles specifically for Windows endpoints discovered via AD.

* By providing AD administrator credentials within the deployment profile, EMS can remotely push the FortiClient MSI installer to domain-joined endpoints that do not yet have the software installed.

* C. Endpoint profiles can be assigned to endpoints based on domain groups:

* The core benefit of AD integration is the ability to map Endpoint Policies to specific AD Organizational Units (OUs) or Security Groups.

* When an endpoint policy is assigned to an AD group, all FortiClient endpoints belonging to that group automatically receive the associated security profiles (Antivirus, Web Filter, VPN, etc.) defined within that policy.

2. Why Other Options are Incorrect/Secondary:

* A. FortiClient EMS has full read-write access on the AD server:

* The curriculum states explicitly that the LDAP/AD connection is read-only.

* EMS cannot modify AD objects, create users, or change group memberships; it only synchronizes information from the AD server to the EMS database.

* D. Imported AD endpoints cannot be directly deleted on FortiClient EMS:

* While technically true in a functional sense (deleting a synced endpoint will result in it being re-added during the next sync unless it is removed from the AD OU), the curriculum typically prioritizes B and C as the primary functional "features" of the integration.

* Note that the guide specifies the "Delete" action in the Endpoints pane is restricted to non- domain devices to prevent synchronization conflicts.

3. Summary of Integration Features:

* Sync Schedule: EMS periodically syncs with AD (default every 10 minutes) to update the endpoint list.

* Policy Automation: Moving a user or computer to a different group in AD will cause EMS to automatically update their security posture based on the new group's assigned policy.

NEW QUESTION # 28

Refer to the exhibits.

The image contains two screenshots. The top screenshot shows the 'FortiClient Endpoint Management Server' interface. The left sidebar has 'Zero Trust Tags' selected. The main pane shows a table with one entry: 'Endpoint with Tag' (Remote-Users (1)). The table columns are 'Endpoint', 'User', 'IP', and 'Tagged on'. The entry shows 'Remote-Client' as the endpoint, 'Administrator' as the user, '10.0.2.20' as the IP, and '2021-09-30 09:12:53' as the tagged-on timestamp. The bottom screenshot shows the 'FortiClient -- Zero Trust Fabric Agent' GUI. The left sidebar has 'Zero Trust Telemetry' selected. The right pane shows a 'User Input' section with a 'User' icon and a list of sources: OS (checked, updated 9/30/2021 8:56:21 AM), LinkedIn, Google, and Salesforce. Below this, status information is shown: Status 'Online/Off-fabric', Hostname 'REMOTE-CLIENT', and Domain.

Which show the Zero Trust Tag Monitor and the FortiClient GUI status.

Remote-Client is tagged as Remote-Users on the FortiClient EMS Zero Trust Tag Monitor.

What must an administrator do to show the tag on the FortiClient GUI?

- A. B. Change the FortiClient system settings to enable tag visibility
- B. Update tagging rule logic to enable tag visibility
- C. Change the endpoint control setting to enable tag visibility
- D. Change the user identity settings to enable tag visibility

Answer: A

Explanation:

Based on the exhibits provided:

* The "Remote-Client" is tagged as "Remote-Users" in the FortiClient EMS Zero Trust Tag Monitor.

* To ensure that the tag "Remote-Users" is visible in the FortiClient GUI, the system settings within FortiClient need to be updated

to enable tag visibility.

* The tag visibility feature is controlled by FortiClient system settings which manage how tags are displayed in the GUI. Therefore, the administrator needs to change the FortiClient system settings to enable tag visibility.

NEW QUESTION # 29

Which security fabric component sends a notification to quarantine an endpoint after IOC detection in the automation process?

- A. FortiAnalyzer
- B. FortiClient EMS
- **C. D. Forti Gate**
- D. FortiClient

Answer: C

NEW QUESTION # 30
