

Zertifizierung der Analytics-Arch-201 mit umfassenden Garantien zu bestehen

Übrigens, Sie können die vollständige Version der Pass4Test Analytics-Arch-201 Prüfungsfragen aus dem Cloud-Speicher herunterladen: <https://drive.google.com/open?id=1FJpZR-yG7c8NPzMwVihhkVgoMZuPnXNc>

Jede Version der Salesforce Analytics-Arch-201 Prüfungsunterlagen von uns hat ihre eigene Überlegenheit. PDF Version hat keine Beschränkung für Anlage, deshalb können Sie irgendwo die Unterlagen lesen. Wenn Sie Internet benutzen können, die Online Test Engine der Salesforce Analytics-Arch-201 können Sie sowohl mit Windows, Mac als auch Android, iOS benutzen. Mit Simulations-Software können Sie die Prüfungsumwelt der Salesforce Analytics-Arch-201 erfahren und bessere Kenntnisse darüber erwerben. Übrigens, Sie dürfen die Prüfungssoftware irgendwie viele Male installieren.

Unsere Salesforce Analytics-Arch-201 Prüfungsunterlage (Salesforce Certified Tableau Architect) enthalten alle echten, originalen und richtigen Fragen und Antworten. Die Abdeckungsrate unserer Salesforce Analytics-Arch-201 Unterlagen (Fragen und Antworten) (Salesforce Certified Tableau Architect) ist normalerweise mehr als 98%.

Analytics-Arch-201 Originale Fragen - Analytics-Arch-201 Übungsmaterialien

Wofür zögern Sie noch? Sie haben nur eine Chance. Jetzt können Sie die vollständige Version zur Salesforce Analytics-Arch-201

Zertifizierungsprüfung bekommen. Sobald Sie die Pass4Test klicken, wird Ihr kleiner Traum verwirklicht werden. Sie haben die besten Schulungsunterlagen zur Salesforce Analytics-Arch-201 Zertifizierungsprüfung gekriegen. Benutzen Sie beruhigt unsere Salesforce Analytics-Arch-201 Prüfungsfragen und Antworten, werden Sie sicher die Salesforce Analytics-Arch-201 Prüfung bestehen.

Salesforce Analytics-Arch-201 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.
Thema 2	• Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.
Thema 3	• Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.

Salesforce Certified Tableau Architect Analytics-Arch-201 Prüfungsfragen mit Lösungen (Q139-Q144):

139. Frage

If you encounter an error related to dependency resolution while installing Tableau Server on Linux, what should be your initial troubleshooting step?

- A. Changing the Linux server's hostname to ensure it's correctly recognized by Tableau Server
- **B. Verifying that all required dependencies are installed and up-to-date on the Linux system**
- C. Temporarily disabling the firewall and antivirus software on the Linux server
- D. Configuring the network settings to allow unrestricted internet access to the Linux server

Antwort: B

Begründung:

Verifying that all required dependencies are installed and up-to-date on the Linux system When facing a dependency resolution error during the installation of Tableau Server on Linux, the first step should be to verify that all necessary dependencies are installed and up-to-date. Dependency issues often arise from missing or outdated packages, and ensuring that the system meets all pre-installation requirements is key to resolving these issues. Option A is incorrect because disabling firewall and antivirus software does not typically address dependency resolution problems. Option C is incorrect as configuring network settings for unrestricted internet access is not a standard approach to resolving dependency issues. Option D is incorrect because changing the hostname of the server is unlikely to resolve dependency-related installation errors.

140. Frage

After attempting to install Tableau Server on a Windows system, you encounter an error indicating a failure in the pre-installation check. What should be your first step in resolving this issue?

- A. Reviewing the installation logs to identify the specific component that failed the pre-installation check
- B. Increasing the RAM and CPU resources of the Windows system
- C. Reformatting the Windows system to ensure a clean state for installation
- D. Immediately uninstalling and reinstalling Tableau Server

Antwort: A

Begründung:

Reviewing the installation logs to identify the specific component that failed the pre-installation check. When encountering an error during the pre-installation check of Tableau Server on Windows, the first step should be to review the installation logs. These logs provide detailed information on which specific component or requirement failed, allowing for targeted trouble-shooting and resolution. Option A is incorrect because reformatting the system is an excessive measure before reviewing detailed logs for specific issues. Option C is incorrect as increasing hardware resources does not directly address issues identified in pre-installation checks. Option D is incorrect because uninstalling and reinstalling Tableau Server without identifying the root cause of the failure is unlikely to resolve the issue.

141. Frage

In configuring LDAP (Lightweight Directory Access Protocol) for authentication in Tableau Server, what is an essential step to ensure successful user authentication?

- A. Setting up a secondary LDAP server as a fallback for the primary LDAP server
- B. Specifying the correct base distinguished name (DN) and search filters in the LDAP configuration on Tableau Server
- C. Configuring Tableau Server to periodically synchronize with the LDAP server, regardless of user login attempts
- D. Allocating additional CPU resources to Tableau Server to handle the encryption and decryption of LDAP traffic

Antwort: B

Begründung:

Specifying the correct base distinguished name (DN) and search filters in the LDAP configuration on Tableau Server. When configuring LDAP for authentication in Tableau Server, it is critical to specify the correct base distinguished name (DN) and search filters. This ensures that Tableau Server can correctly query the LDAP directory for user information and authenticate users based on the organization's user structure and policies. Option A is incorrect because periodic synchronization, while beneficial for keeping user information updated, is not critical for the initial configuration of LDAP authentication. Option C is incorrect as allocating additional CPU resources specifically for LDAP traffic is generally not necessary. Option D is incorrect because setting up a secondary LDAP server is more related to high availability and redundancy rather than the initial configuration of LDAP authentication.

142. Frage

A multinational company is implementing Tableau Cloud and requires a secure method to manage user access across different regions, adhering to various data privacy regulations. What is the most appropriate authentication strategy?

- A. Integration with a centralized identity management system that complies with regional data privacy laws
- B. Universal access with a single shared login for all users
- C. Randomized password generation for each user session
- D. Region-specific local authentication for each group of users

Antwort: A

Begründung:

Integration with a centralized identity management system that complies with regional data privacy laws. This strategy ensures secure and compliant user access management across different regions by leveraging a centralized system that is designed to meet various data privacy regulations. Option A is incorrect because a single shared login lacks security and does not comply with regional data privacy laws. Option B is incorrect as region-specific local authentication can lead to fragmented and inconsistent access control. Option D is incorrect because randomized password generation for each session, while secure, is impractical and user-unfriendly.

143. Frage

During the installation of Tableau Server on a Windows system, you encounter a permissions error. What should be your initial action to address this issue?

- A. Reinstalling the Windows operating system to reset system permissions
- B. Granting administrator privileges to all user accounts on the Windows system
- **C. Checking and adjusting the security permissions of the Tableau Server installation directory**
- D. Disabling User Account Control (UAC) on the Windows system

Antwort: C

Begründung:

Checking and adjusting the security permissions of the Tableau Server installation directory When encountering a permissions error during the installation of Tableau Server on Windows, the first action should be to check and adjust the security permissions of the installation directory. Ensuring that the installer has the necessary permissions to write to the directory is crucial for a successful installation. Option A is incorrect because disabling UAC is not a recommended practice and does not specifically address permission issues with the Tableau Server installation directory. Option C is incorrect as granting administrator privileges to all users is excessive and poses a security risk. Option D is incorrect because reinstalling the operating system is an unnecessary and extreme measure for resolving a permissions issue.

144. Frage

.....

Um in der IT-Branche große Fortschritte zu machen, entscheiden sich viele ambitionierte IT-Profis dafür, die Salesforce Analytics-Arch-201 Zertifizierungsprüfung abzulegen und somit das IT-Zertifikat zu bekommen. Wegen des schwierigkeitsgrades der Salesforce Analytics-Arch-201 Zertifizierungsprüfung ist die Erfolgsquote sehr niedrig. Aber es ist doch eine weise Wahl, an der Salesforce Analytics-Arch-201 Zertifizierungsprüfung teilzunehmen, denn in der heutigen konkurrenzfähigen IT-Branche muss man sich immer noch verbessern. Und Sie können auch viele Methoden wählen, die Ihnen beim Bestehen der Prüfung helfen.
