

Free PDF Quiz Nutanix - Pass-Sure Pdf NCP-CI-Azure Braindumps

DOWNLOAD the newest RealExamFree NCP-CI-Azure PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1l2kJK4Q2q3PFwzD-CQnCfdZV6Z-mxdws>

If you want to study with computer, then you can try our Software or APP ONLINE versions. These two versions of our NCP-CI-Azure practice guide helps you to test your knowledge and over the exam anxiety. They have various self-assessment and self-learning tools, like timed exam and exam history, test series etc Which help you to manage time during actual NCP-CI-Azure Exam and arrange multiple tests which you can attempt on different intervals. Also you may improve your test skills by attempting NCP-CI-Azure exam questions multiple times.

Nutanix NCP-CI-Azure Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Configuring an NC2 on Azure Environment: This section evaluates the skills of IT Administrators and emphasizes modifying cloud networking security to protect resources. Candidates will configure Nutanix networking settings and troubleshoot connectivity issues to ensure seamless communication within the cloud environment.
Topic 2	<ul style="list-style-type: none">Deploying an NC2 on Azure Environment: This section assesses the skills of Nutanix Cloud Operators and focuses on deploying the cloud cluster within the Azure environment. Candidates will learn to configure cloud provider networking effectively, ensuring that all necessary resources are correctly set up for deployment.
Topic 3	<ul style="list-style-type: none">Managing an NC2 on Azure Environment: This section relates to skills in identifying management tasks for nodes and clusters. Candidates will monitor cluster health and cloud resource performance, ensuring that all components function efficiently. Understanding these management tasks is vital for maintaining operational integrity in a hybrid cloud environment.

Topic 4	<ul style="list-style-type: none"> • Planning an NC2 on Azure Deployment: This section of the exam measures the skills of IT Administrators and covers the preparation of the Azure cloud environment, including determining the appropriate Azure account and node types. It also involves subscribing to the NC2 service, which requires knowledge of authentication methods and organization naming conventions. Additionally, candidates must determine implementation requirements by evaluating deployment use cases and redundancy needs. Identifying networking requirements is crucial, focusing on connectivity options like VPN and CIDR ranges.

Reliable NCP-CI-Azure Dumps Sheet | NCP-CI-Azure New Exam Camp

our NCP-CI-Azure practice torrent is the most suitable learning product for you to complete your targets. It is never too late to try new things no matter how old you are. Someone always give up their dream because of their ages, someone give up trying to overcome NCP-CI-Azure exam because it was difficult for them. Now, no matter what the reason you didn't pass the exam, our study materials will try our best to help you. If you are not sure what kinds of NCP-CI-Azure Exam Question is appropriate for you, you can try our free demo of the PDF version. There must be one that suits you best.

Nutanix Certified Professional - Cloud Integration - Azure (NCP-CI-Azure v6.7) Sample Questions (Q40-Q45):

NEW QUESTION # 40

Which statement best describes south bound traffic to a Nutanix User VPC originating outside the BC2 cluster when using a no-NAT (routed path) having two or more Flow Gateways (FGW)?

- A. A BGP gateway runs inside of Prism Central. The BGP gateway advertises externally mutable IP addresses to the Azure Route Server, with each active FGW external IP address as the next hop.
- B. A BGP gateway runs on the CVM of the bare-metal hosts. The BGP gateway advertises externally routable IP addresses to the Azure Route Server, with each active FGW external IP address the next hop.
- C. A BGP gateway is deployed as Azure native VMs in the Prism Central VNet. The BGP gateway advertises externally routable IP addresses to the Prism Central, with each active FGW external IP address as the next hop.
- **D. A BGP gateway is deployed as Azure native VMs in the Prism Central VNet. The BGP gateway advertises externally routable IP addresses to the Azure Route Server, with each active FGW external IP address as the next hop.**

Answer: D

Explanation:

- * BGP Gateway Deployment: The BGP gateway is deployed as Azure native VMs within the Prism Central VNet. This deployment ensures seamless integration with Azure's networking infrastructure.
- * Route Advertisement: The BGP gateway advertises the externally routable IP addresses to the Azure Route Server. This setup allows for dynamic routing and efficient traffic management.
- * Flow Gateways (FGW) as Next Hops: Each active Flow Gateway's external IP address is used as the next hop. This configuration ensures that southbound traffic is correctly routed to the appropriate Flow Gateway, providing efficient and reliable connectivity.

NEW QUESTION # 41

An administrator is tasked to identify the firewall requirement and submit the port request to the requirement team before the clusters deployment.

Which requirement should the administrator ensure is implement on the corporate firewall?

- A. ICMP and connectivity can be disabled between the CVMs, Prism Element, and Prism Central
- **B. Allow bi-directional Internet Control Message Protocol (ICMP) traffic between the CVMs, Prism Element, and Prism Central.**
- C. Allow uni-directional internet Control Message Protocol (ICMP) traffic between the CVMs, femenn and Prism Central.

- D. ICMP can be disabled but the connectivity should be enabled between the CVMs, Prism Element, and Prism Central.

Answer: B

Explanation:

ICMP Traffic: ICMP is essential for network diagnostics and troubleshooting, such as ping and traceroute, which help in monitoring the connectivity and health of the network.

Bi-Directional Traffic: Allowing bi-directional ICMP traffic ensures that all nodes (CVMs, Prism Element, and Prism Central) can both send and receive diagnostic messages, which is crucial for maintaining proper communication and network stability.

NEW QUESTION # 42

The cluster has the following configuration:

A Transit VPC exists as Default, but is additionally configured with an overlay-external-subnet-nonat overlay subnet. The ERP for the Transit VPC is 10.1.1.0/25. A User VPC exists named User_VPC_Prod. The ERP for the User VPC is 10.1.1.0/24. Outbound and inbound routes have been configured. A User VM NO-NAT subnet has been configured in the User VPC. The administrator has successfully created a VM and added the NIC associated with the NO-NAT subnet, but is not able to communicate with other resources.

Which option will resolve this issue?

- A. Check that the network ACLs for the NO-NAT subnet are not blocking the necessary traffic.
- B. Ensure that the security groups associated with the VM allow traffic to and from the desired resources.
- **C. The ERP in the User VPC must be from a different CIDR range than the ERP in the transit VPC.**
- D. Verify that the route table associated with the User VPC has appropriate routes to the Transit VPC.

Answer: C

Explanation:

In this scenario, the issue arises from overlapping IP address ranges between the Transit VPC and the User VPC. Here's a detailed breakdown:

Understanding ERPs (Elastic Routing Prefixes):

The ERP for the Transit VPC is 10.1.1.0/25, which covers IP addresses from 10.1.1.0 to 10.1.1.127.

The ERP for the User VPC is 10.1.1.0/24, which covers IP addresses from 10.1.1.0 to 10.1.1.255.

IP Address Overlap:

Since 10.1.1.0/25 is a subset of 10.1.1.0/24, there is a significant overlap in the IP address ranges of these two ERPs.

This overlap can cause routing issues because the same IP address range is being used in both VPCs, leading to ambiguity in routing and communication.

Communication Issue:

When a VM in the User VPC tries to communicate with other resources, the network cannot accurately determine the correct route due to the overlapping IP address ranges.

This overlap prevents proper routing and results in the VM being unable to communicate with other resources as intended.

Resolution:

To resolve this issue, the ERPs must be in different CIDR ranges. This means the IP address ranges for the Transit VPC and the User VPC should not overlap.

For example, if the Transit VPC uses 10.1.1.0/25, the User VPC could use a different range such as 10.1.2.0/24 or any other range that does not overlap with 10.1.1.0/25.

By ensuring that the ERPs are in different CIDR ranges, the network can properly route traffic between the VPCs without any conflicts or ambiguities, thereby enabling the VM in the User VPC to communicate with other resources effectively.

NEW QUESTION # 43

Native Azure VMs exist in a subnet (10.20.80.0/20) in the Prism Central VNet that need access to the workload running on the Nutanix User.

What needs to be modified to allow access from the native Azure VMs to the workloads running in the Nutanix User VPC?

- A. Change the ERP value to the subnet range of the native Azure VMs (10.20.80.0/20) on the Transit VPC and the Nutanix User VPC.
- B. Adjust the Inbound Network Security Group on the Flow Gateway VM External NIC to allow traffic

102030.0/20.

- C. Remove the ERP value on the transit VPC and Nutanix User VPC.
- **D. Adjust the Inbound Network Security Group on the Flow Gateway VM Internal NIC to allow traffic 102030.0/20.**

Answer: D

Explanation:

To allow access from the native Azure VMs to the workloads running in the Nutanix User VPC, the administrator needs to:

- * Adjust the Inbound Network Security Group (NSG) on the Flow Gateway VM's Internal NIC.
- * Specifically, allow traffic from the subnet range of the native Azure VMs (10.20.80.0/20) in the Inbound rules of the NSG associated with the Internal NIC of the Flow Gateway VM.

This configuration change permits the desired network traffic, ensuring that the native Azure VMs can communicate with the workloads in the Nutanix User VPC. References

NEW QUESTION # 44

An administrator needs to attach a network interface to a Flow Gateway VM.

What option should be enabled in the Azure portal and in the OS of the Flow gateway VM to meet this network requirement?

- **A. IP Forwarding**
- B. Static Route
- C. Dynamic Route
- D. Port Tagging

Answer: A

Explanation:

* IP Forwarding in Azure: Enabling IP forwarding allows the VM to forward network traffic that is not specifically addressed to itself. This is necessary for network devices like the Flow Gateway VM to route traffic correctly.

* Network Interface Configuration: Both the Azure portal settings and the VM's operating system must

* have IP forwarding enabled to ensure proper traffic handling and routing capabilities.
