You can visit our website, and chat with our service online or via email at any time for we are working 24/7 online. Or you can free download the demos of our AWS-Certified-Developer-Associate learning guide on our website, just click on the buttons, you can reach whatever you want to know.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q76-Q81):

NEW QUESTION # 76

A security engineer needs to ensure their company's use of AWS meets AWS security best practices. As part of this, the AWS account root user must not be used for daily work. The root user must be monitored for use, and the security team must be alerted as quickly as possible if the root user is used.

Which solution meets these requirements?

- A. Set up a rule in AWS Config to trigger root user events. Trigger an AWS Lambda function and generate notifications using Amazon SNS.
- B. Create root user access keys. Use an AWS Lambda function to parse AWS CloudTrail logs from Amazon S3 and generate notifications using Amazon SNS.

- C. Set up an Amazon CloudWatch Events rule that triggers an Amazon SNS notification.
- D. Use Amazon Inspector to monitor the usage of the root user and generate notifications using Amazon SNS.

Answer: A

NEW QUESTION # 77

An application ingests data from an Amazon Kinesis data stream. The shards in the data stream are set for normal traffic. During tests for peak traffic, the application ingests data slowly. A developer needs to adjust the data stream to handle the peak traffic.

What should the developer do to meet this requirement MOST cost-effectively?

- A. Decrease the amount of time that data is kept in the data stream by using the DecreaseStreamRetentionPeriod API operation.
- B. Install the Kinesis Producer Library (KPL) to ingest data into the data stream.
- C. Increase the shard count in the data stream by using the UpdateShardCount API operation.
- D. Switch to on-demand capacity mode for the data stream. Specify a partition key when writing data to the data stream.

Answer: C

NEW QUESTION # 78

A company is deploying a solution in Amazon Aurora by migrating from an on-premises system. The IT department has established an AWS Direct Connect link from the company's data center. The company's Database Specialist has selected the option to require SSL/TLS for connectivity to prevent plaintext data from being sent over the network. The migration appears to be working successfully, and the data can be queried from a desktop machine.

Two Data Analysts have been asked to query and validate the data in the new Aurora DB cluster. Both Analysts are unable to connect to Aurora. Their user names and passwords have been verified as valid and the Database Specialist can connect to the DB cluster using their accounts. The Database Specialist also verified that the security group configuration allows network from all corporate IP addresses.

What should the Database Specialist do to correct the Data Analysts' inability to connect?

- A. Add explicit mappings between the Data Analysts' IP addresses and the instance in the security group assigned to the DB cluster.
- B. Modify the Data Analysts' local client firewall to allow network traffic to AWS.
- C. Instruct the Data Analysts to download the root certificate and use the SSL certificate on the connection string to connect.
- D. Restart the DB cluster to apply the SSL change.

Answer: B

NEW QUESTION # 79

A current architecture uses many Lambda functions invoking one another as a large state machine. The coordination of this state machine is legacy custom code that breaks easily.

Which AWS Service can help refactor and manage the state machine?

- A. Amazon Elastic MapReduce
- B. AWS Data Pipeline
- C. AWS Step Functions
- D. AWS SNS with AWS SQS

Answer: C

Explanation:

Explanation

NEW QUESTION # 80

In DynamoDB, if you create a table and request 10 units of write capacity and 200 units of read capacity of provisioned throughput,

how much would you be charged in US East (Northern Virginia) Region?

- A. \$0.03 per hour
- B. \$0.15 per hour
- C. \$0.10 per hour
- **D. \$0.05 per hour**

Answer: D

Explanation:

To understand pricing in DynamoDB, consider the following example. If you create a table and request 10 units of write capacity and 200 units of read capacity of provisioned throughput, you would be charged:

$\$0.01 + (4 \times \$0.01) = \$0.05$ per hour
