2026 Latest Itcertking CDCP PDF Dumps and CDCP Exam Engine Free Share: <https://drive.google.com/open?id=1imErzpfzvys1EgMAXiu2PoEPw25hDNu1>

EXIN CDCP certification is indeed a better idea before you start with the interviews. EXIN CDCP certification will add up to your excellence in your field and leave no space for any doubts in the mind of the hiring team. But, have you thought about how can you prepare for the EXIN CDCP Exam Questions? Do you have any idea how we can crack the nut to give wings to our dreams?

EXIN CDCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Electro Magnetic Fields: The topic deals with effects of EMF on human health and equipment (H)EMP, standards, and EMF shielding solutions.
Topic 2	<ul style="list-style-type: none">• Raised Floor• Suspended Ceiling: The topic discusses applicable standards, signal reference grid, and disability act and regulations.
Topic 3	<ul style="list-style-type: none">• Water Supply: This topic is all about water supply techniques and application areas.
Topic 4	<ul style="list-style-type: none">• Auxiliary Systems: The topic covers water leak detection systems, data centre monitoring requirements, EMS, BMS and DCIM.
Topic 5	<ul style="list-style-type: none">• Physical Security and Safety: Sub-topics are about physical security considerations and physical safety considerations.
Topic 6	<ul style="list-style-type: none">• Fire Safety• Protection: This topic gives an understanding of standards for fire suppression, detection systems, total flooding fire suppression techniques, and handheld extinguishers. Additionally, it covers Signage and safety.

Cert CDCP Guide, CDCP Valid Exam Braindumps

The CDCP prep guide adopt diversified such as text, images, graphics memory method, have to distinguish the markup to learn information, through comparing different color font, as well as the entire logical framework architecture, let users of the CDCP training dump on the premise of grasping the overall layout, better clues to the formation of targeted long-term memory, and through

the cycle of practice, let the knowledge more deeply printed in my mind. The CDCP Exam Questions are so scientific and reasonable that you can easily remember everything of the CDCP exam.

EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q81-Q86):

NEW QUESTION # 81

is the ability of a system or component to perform its required functions under stated conditions for a specified period of time.

- A. Reliability
- B. Scalability
- C. Agility
- D. Availability

Answer: A

Explanation:

According to the IEEE definition, reliability is the ability of a system or component to perform its required functions under stated conditions for a specified period of time. Reliability is a measure of how often a system or component fails, and how long it takes to recover from a failure. Reliability is closely related to availability, which is the degree to which a system or component is operational and accessible when required for use. Reliability and availability are both affected by factors such as design, maintenance, testing, and environmental conditions.

NEW QUESTION # 82

Does shielded twisted pair network cabling provide protection against EMF from power cables?

- A. No, the shielding is designed for alien cross-talk between network cables, it provides no or little protection against low frequency EMF.
- B. Yes, as the shielding for twisted pair network cabling is specifically design for low frequency EMF protection.
- C. No, the shielding for twisted pair network cabling is for physical protection against vandalism and accidental cutting of the cable.
- D. Yes, but only if the power cable is placed in a tre-foil cable arrangement.

Answer: A

Explanation:

Shielded twisted pair cables (STP) are Ethernet cables that feature additional protection against electromagnetic interference from external sources, such as radio waves, microwaves, or other network cables.

This is achieved by wrapping each pair of wires with a conductive shield, usually made of foil or braided wire, and then enclosing the entire cable with another shield layer. However, this shielding is not effective against low frequency electromagnetic fields (EMF) from power cables, which can induce currents and voltages in the network cables and cause signal distortion or data loss. Low frequency EMF can only be reduced by increasing the distance between the power and network cables, or by using a tre-foil cable arrangement, which is a special configuration of three power cables twisted together to cancel out the magnetic fields they generate.

NEW QUESTION # 83

An optical fiber cable comes with the specifications 50/125 um.

What do the numbers represent?

- A. The first number represents the distance for a 10 Gb/s connection; the second number represents the distance for a 1 Gb/s connection.
- B. The first number represents the diameter of the core; the second number represents the diameter of the cladding in microns.
- C. The first number represents the required distance to single-phase power cabling; the second number represents the required distance to three-phase cabling.
- D. The first number represents the diameter of the core; the second number represents the actual diameter cable including the

buffer and jacket.

Answer: B

Explanation:

Optical fiber cables are composed of a core, a cladding, and a coating. The core is the central part of the fiber that carries the light signal. The cladding is the layer surrounding the core that reflects the light back into the core and prevents signal loss. The coating is the protective layer that covers the cladding and provides mechanical strength and environmental protection. The specifications of an optical fiber cable indicate the dimensions of the core and the cladding in microns (m), which are one millionth of a meter. For example, a

50/125 m cable has a core diameter of 50 m and a cladding diameter of 125 m. The coating diameter is usually 250 m, but it is not part of the specifications.

NEW QUESTION # 84

The termination of the ability of a product to perform its required function can be defined as.

- A. Obstacle
- **B. Failure**
- C. Hindrance
- D. Termination

Answer: B

Explanation:

According to the EPI Data Centre Professional (CDCP) Preparation Guide, failure is defined as "the termination of the ability of a product to perform its required function" (page 9). Failure can occur due to various reasons, such as wear and tear, design flaws, human errors, environmental factors, or external events.

Failure can affect the availability, reliability, and performance of a product, system, or service.

NEW QUESTION # 85

The three elements of the fire triangle are, and. (Choose three.)

- **A. Fuel**
- B. Water
- **C. Heat**
- D. Earth
- **E. Oxygen**

Answer: A,C,E

Explanation:

The fire triangle is a simple model that illustrates the three elements that a fire needs to ignite and sustain:

oxygen, heat, and fuel. Oxygen is the oxidizing agent that enables the combustion reaction, heat is the energy source that raises the temperature of the fuel to its ignition point, and fuel is the material that reacts with oxygen and releases heat and light. Removing any one of these elements can extinguish a fire. For example, water can reduce the heat and the oxygen, sand or soil can smother the fuel and the oxygen, and fire extinguishers can displace the oxygen or lower the temperature.
