Our CIS-Discovery study materials boost superior advantages and the service of our products is perfect. We choose the most useful and typical questions and answers which contain the key points of the test and we try our best to use the least amount of questions and answers to showcase the most significant information.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q66-Q71):

NEW QUESTION # 66

For the Parse Variable pattern operation, what is required to have two different parsing methods to populate variables?

- A. A tabular and a scalar variable.
- B. Two different Define Parsing selections on the same step.
- C. Two different steps.
- D. Two different Debug Mode sessions.

Answer: C

Explanation:

The Parse Variable pattern operation allows you to extract information from the output of a previous operation and save it in a variable. You can choose from different parsing methods, such as JSON File, XML File, Regular Expression, or Custom Script. To have two different parsing methods to populate variables, you need to use two different steps, each with a different Define Parsing selection. For example, you can use one step to parse a JSON file and another step to parse an XML file. You cannot use two different parsing methods on the same step, as the Define Parsing selection is unique for each step.

References:

- * Parse command output: This article explains how to use the Parse command output operation and the different parsing methods available.
- * Pattern Designer: Parse Variable - JSON File gives error: This article provides a troubleshooting tip for using the JSON File parsing method.
- * Examples of EVAL scripts used in Discovery patterns: This article provides some examples of custom scripts that can be used for the Custom Script parsing method.
