

Valid Test 300-420 Tips, 300-420 Test Result

What's more, part of that Pass4guide 300-420 dumps now are free: https://drive.google.com/open?id=1j49AKqDA4EGra28ANS3Hvv_UnpW50mPZ

A wise man can often make the most favorable choice to buy our 300-420 study materials, I believe you are one of them. If you are not at ease before buying our 300-420 actual exam, we have prepared a free trial for you. Just click on the mouse to have a look, giving you a chance to try on our 300-420 learning guide. Perhaps this choice will have some impact on your life. And our 300-420 training braindumps are the one which can change your life.

Pass4guide's study material is available in three different formats. The reason we have introduced three formats of the Designing Cisco Enterprise Networks (300-420) practice material is to meet the learning needs of every student. Some candidates prefer 300-420 practice exams and some want Real 300-420 Questions due to a shortage of time. At Pass4guide, we meet the needs of both types of aspirants. We have Cisco 300-420 PDF format, a web-based practice exam, and Designing Cisco Enterprise Networks (300-420) desktop practice test software.

Benefits with Pass4guide Cisco 300-420 study material

Are you one of them? Are you still worried and confused because of the various exam materials and fancy training courses exam? Pass4guide is the right choice for you. Because we can provide you with a comprehensive exam, including questions and answers. All of these will help you to acquire a better knowledge, we are confident that you will through Pass4guide the Cisco 300-420 Certification Exam. This is our guarantee to all customers.

Passing the Cisco 300-420 Exam leads to the Cisco Certified Specialist - Enterprise Design certification. Designing Cisco Enterprise Networks certification demonstrates that the candidate has the knowledge and skills required to design enterprise networks using Cisco technologies. It is a valuable credential for IT professionals who want to advance their careers in network design and architecture.

Cisco Designing Cisco Enterprise Networks Sample Questions (Q66-Q71):

NEW QUESTION # 66

Refer to the exhibit. An architect is designing a Layer 3 campus network. The design must hide network instability, reduce network overhead, and conserve critical device memory. Which route summarization solution must the architect select?

- A. The core layer must advertise a default route toward the aggregation layer. The VLAN subnets must be summarized into 10.0.0.0/16 at the access layer and advertised to the aggregation layer.
- **B. The aggregation layer must advertise a default route toward the access layer. The VLAN subnets must be summarized into 10.0.0.0/16 at the aggregation layer and advertised to the core layer.**
- C. The core layer must advertise a default route toward the aggregation layer. The VLAN subnets must be summarized into 10.0.0.0/16 at the aggregation layer and advertised to the core layer.
- D. The aggregation layer must advertise a default route toward the core layer. The VLAN subnets must be summarized into 10.0.0.0/16 at the aggregation layer and advertised to the access layer.

Answer: B

Explanation:

The correct design is to advertise a default route from the aggregation layer toward the access layer and summarize the VLAN subnets at the aggregation layer toward the core. Cisco hierarchical campus design places summarization at aggregation or distribution boundaries because that is where access-layer routes are collected before entering the core. Summarizing the VLAN ranges into 10.0.0.0/16 hides individual access VLAN instability from the core, reducing routing table entries, protocol churn, and memory consumption on core devices. Sending a default route from aggregation to access also keeps access switches simple and prevents them from carrying unnecessary campus routing detail. This design contains failures and convergence events inside the appropriate block. Summarizing at the access layer is less practical when multiple VLANs aggregate at distribution. Advertising a default toward the core is backwards, because the core must know the summarized access block. Reference topics: hierarchical campus routing, aggregation- layer summarization, default routing to access, route-table reduction, convergence containment.

NEW QUESTION # 67

Which two border nodes are available in the Cisco SD-Access architecture? (Choose two.)

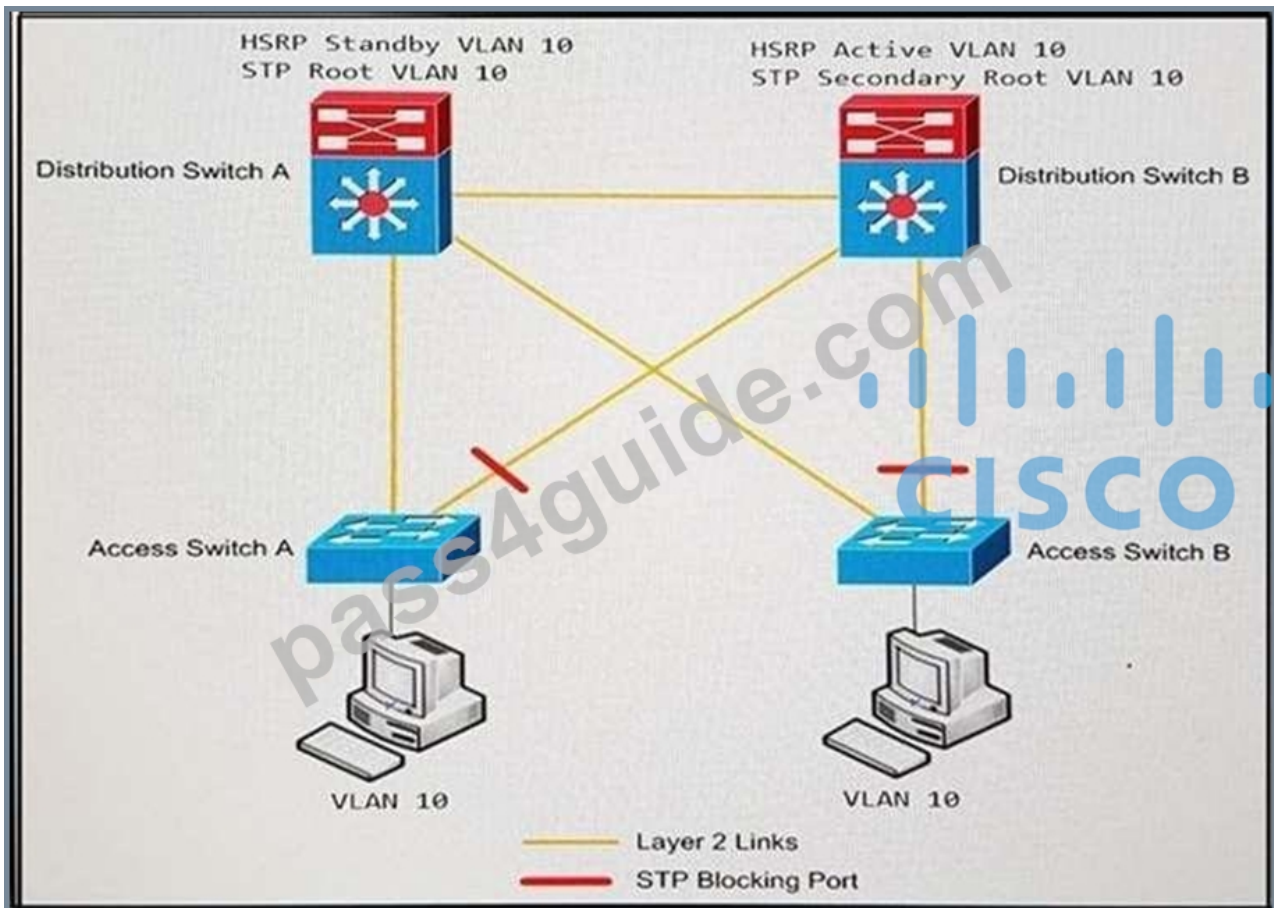

- A. intermediate border
- **B. anywhere border**
- C. internal border
- **D. extended border**
- E. edge border

Answer: B,D

Explanation:

Section: Advanced Enterprise Campus Networks

NEW QUESTION # 68

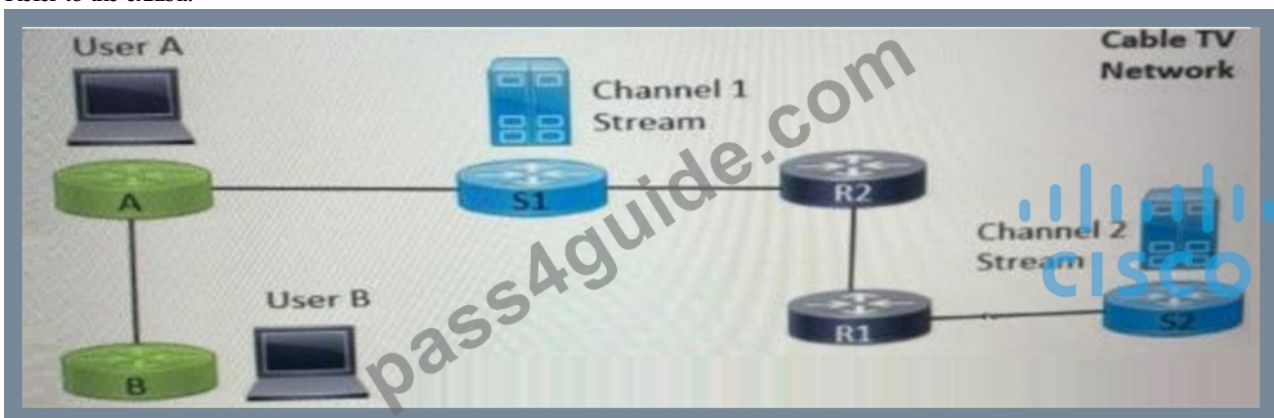

Refer to the exhibit. An engineer must optimize the traffic flow of the network. Which change provides a more efficient design between the access and the distribution layer?

- A. Change the link between distribution switch A and distribution switch B to be a routed link
- B. Create an EtherChannel link between distribution switch A and distribution switch B
- C. Add a link between access switch A and access switch B
- D. Reconfigure the distribution switch A to become the HSRP Active

Answer: D

NEW QUESTION # 69

Refer to the exhibit.

A network engineer must design a multicast solution based on:

- * Many-to-many communications between the users and sources
- * Support of up to 50 multicast sources
- * Users that must register for streams

Which multicast solution must the engineer select?

- A. Source-Specific Multicast
- B. Any Source Multicast
- C. Bidirectional PIM
- D. Multicast VPN

Answer: C

NEW QUESTION # 70

Refer to the exhibit.

```

class MISSION-CRITICAL
  bandwidth percent 26
  random-detect dscp-based
class BULK
  bandwidth percent 5
  random-detect dscp-based
class SCAVENGER
  bandwidth percent 1
class class-default
  bandwidth percent 24
  random-detect
!
class-map match-all BULK
  match ip dscp af11 af12
class-map match-all VIDEO
  match ip dscp af41 af42
class-map match-any ROUTING
  match ip dscp cs6
class-map match-all MISSION-CRITICAL
  match ip dscp af21 af22
class-map match-any SIGNALLING
  match ip dscp cs3
  match ip dscp af31
class-map match-all VOICE
  match ip dscp ef
class-map match-all SCAVENGER
  match ip dscp cs1
!
interface GigabitEthernet0/2
  description Link_to_DC
  service-policy output WAN-DC-LINK

```

Refer to the exhibit. A customer needs to apply QoS to the network management traffic passing through the GigabitEthernet0/2 interface. All eight queuing classes are in use, so the new requirement must be integrated into the existing policy. Which solution must the customer choose?

- A. Mark the traffic to DSCP CS4 and assign it to the SIGNALLING class. Then, prioritize traffic within the class.
- B. Mark traffic to DSCP CS5 and assign it to the SIGNALLING class. Then, baseline existing queue sizes to determine if additional bandwidth can be provisioned to the SIGNALLING class.
- C. Mark the traffic to DSCP CS6 and assign it to the ROUTING class. Then, prioritize traffic within the class.
- D. Mark the traffic to DSCP CS2 and assign it to the ROUTING class. Then, baseline existing queue sizes to determine if additional bandwidth can be provisioned to the ROUTING class

Answer: D

NEW QUESTION # 71

.....

There are some loopholes or systemic problems in the use of a product, which is why a lot of online products are maintained for a very late period. The 300-420 test material is not exceptional also, in order to let the users to achieve the best product experience, if there is some learning platform system vulnerabilities or bugs, we will check the operation of the 300-420 quiz guide in the first time, let the professional service personnel to help user to solve any problems. The 300-420 prepare torrent has many professionals, and they monitor the use of the user environment and the safety of the learning platform timely, for there are some problems with those still in the incubation period of strict control, thus to maintain the 300-420 quiz guide timely, let the user comfortable working in a better environment.
