Terraform-Associate-003 Valid Test Sample - Lab Terraform-Associate-003 Questions

If you are occupied with your work or study and have little time to prepare for your exam, and you should choose us. Since Terraform-Associate-003 exam bootcamp is high-quality, and you just need to spend about 48 to 72 hours on studying, and you can pass the exam in your first attempt. We are pass guarantee and money back guarantee, and if you fail to pass the exam by using Terraform-Associate-003 Exam Dumps, we will give you full refund. In order to let you obtain the latest information for Terraform-Associate-003 exam braibdumps, we offer you free update for one year after purchasinhg, and the update version will be sent to your email automatically.

HashiCorp Terraform-Associate-003 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Collaborate on infrastructure as code using HCP Terraform: In this section, the topics covered include analyzing the HCP Terraform run workflow, the role of HCP Terraform workspaces and their configuration options, and the management of provider credentials in HCP Terraform.

Topic 2	<ul style="list-style-type: none"> • Develop and troubleshoot dynamic configuration: This section deals with topics such as using language features to validate configuration query providers using data sources, computing and interpolating data using HCL functions, and using meta-arguments in configuration.
Topic 3	<ul style="list-style-type: none"> • Configure and use Terraform providers: In this section, topics covered include understanding Terraform's plugin-based architecture and configuring providers. It also covers aliasing, sourcing, and versioning functions.

HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q95-Q100):

NEW QUESTION # 95

Which parameters does terraform import require? Choose two correct answers.

- A. Resource ID
- B. Resource address
- C. Path
- D. Provider

Answer: A,B

Explanation:

Explanation

These are the parameters that terraform import requires, as they allow Terraform to identify the existing resource that you want to import into your state file, and match it with the corresponding configuration block in your files.

NEW QUESTION # 96

terraform init creates an example main.tf file in the current directory.

- A. False
- B. True

Answer: A

Explanation:

Comprehensive and Detailed in-Depth Explanation: terraform init does not create a main.tf file.

* It initializes the Terraform working directory, downloads provider plugins, and configures the backend.

* Terraform does not generate an example configuration (main.tf); users must create it manually.

Official Terraform Documentation Reference: terraform init - HashiCorp Documentation

NEW QUESTION # 97

You must use different Terraform commands depending on the cloud provider you use.

- A. False
- B. True

Answer: A

Explanation:

You do not need to use different Terraform commands depending on the cloud provider you use. Terraform commands are consistent across different providers, as they operate on the Terraform configuration files and state files, not on the provider APIs directly.

From Terraform CLI Overview:

"Terraform provides a consistent CLI workflow regardless of which cloud or service you're managing." The same Terraform commands work across all providers via plugins.

NEW QUESTION # 98

You modified your Terraform configuration and run Terraform plan to review the changes. Simultaneously, your teammate manually modified the infrastructure component you are working on. Since you already ran terraform plan locally, the execution plan for terraform apply will be the same.

- A. False
- B. True

Answer: A

Explanation:

The execution plan for terraform apply will not be the same as the one you ran locally with terraform plan, if your teammate manually modified the infrastructure component you are working on. This is because Terraform will refresh the state file before applying any changes, and will detect any differences between the state and the real resources.

NEW QUESTION # 99

How can you trigger a run in a Terraform Cloud workspace that is connected to a Version Control System (VCS) repository?

- A. Commit a change to the VCS working directory and branch that the Terraform Cloud workspace is connected to
- B. Only members of a VCS organization can open a pull request against repositories that are connected to Terraform Cloud workspaces
- C. Only Terraform Cloud organization owners can set workspace variables on VCS connected workspaces
- D. Only Terraform Cloud organization owners can approve plans in VCS connected workspaces

Answer: A

Explanation:

This will trigger a run in the Terraform Cloud workspace, which will perform a plan and apply operation on the infrastructure defined by the Terraform configuration files in the VCS repository.

NEW QUESTION # 100

.....

The customers can immediately start using the HashiCorp Certified: Terraform Associate (003) (HCTA0-003) (Terraform-Associate-003) exam dumps of TroytecDumps after buying it.
