International Code Council - Fire-Inspector-II - High-quality 67 - Fire Inspector II Exam Braindump Free

It is normally not a bad thing to pass more exams and get more certifications. In fact to a certain degree, International Code Council certifications will be magic weapon for raising position and salary. Finding latest Fire-Inspector-II valid exam questions answers is the latest and simplest method for young people to clear exam. Our exam dumps include PDF format, soft test engine and APP test engine three versions. Fire-Inspector-II Valid Exam Questions answers will cover all learning materials of real test questions.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q26-Q31):

NEW QUESTION # 26

What is the maximum travel distance to an exit from within a tent?

- A. 100 ft.
- **B. 150 ft.**
- C. Any distance approved by the chief
- D. 75 ft.

Answer: B

Explanation:

The maximum travel distance to an exit from within a tent is regulated under the 2021 International Fire Code (IFC), Section 3103.12.2 - Means of Egress (Tents and Membrane Structures).

IFC Section 3103.12.2 - Travel Distance:

"The maximum travel distance to an exit shall not exceed 150 feet (45,720 mm)." Why Other Options Are Incorrect?

A). 75 ft. - This limit does not apply to tents; the correct limit is 150 ft.

B). 100 ft. - Too restrictive; the IFC allows up to 150 ft.

D). Any distance approved by the chief. - The fire code does not allow unlimited travel distances; 150 feet is the maximum permitted by code.

Correct answer: C. 150 ft.

NEW QUESTION # 27

According to the fire code, when compliance is not immediate, inspection reports of code violations must always include a description of the violation and which of the following?

- A. The mandatory court date
- B. The potential fines for noncompliance
- C. The reinspection date
- **D. Recommended corrective action**

Answer: D

Explanation:

When fire inspectors identify code violations, the inspection report must include a description of the violation along with a recommended corrective action. This ensures that the responsible party understands what steps need to be taken to bring the property into compliance.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 109.3 (Notice of Violation) IFC 109.3 requires that any notice of violation must include a description of the violation and the necessary corrective action.

The intent is to provide clear guidance on how to remedy the issue to meet fire safety standards.

2. NFPA 1 - Fire Code (2021 Edition) - Section 1.7.6 (Enforcement and Documentation of Violations) NFPA 1, Section 1.7.6.1 states that violation reports must specify the corrective action required to comply with the fire code.

Detailed Explanation of Answer Choices:

Option A (Incorrect): While a reinspection date may be provided, it is not a mandatory component of an inspection report for code violations.

Option B (Incorrect): A mandatory court date is not always required; enforcement varies depending on jurisdiction and severity of the violation.

Option C (Correct): Recommended corrective action is required in all violation reports as per IFC 109.3 and NFPA 1.7.6.1.

Option D (Incorrect): Potential fines for noncompliance are determined separately and are not necessarily included in the initial violation report.

Thus, the correct and verified answer is: C. Recommended corrective action.

NEW QUESTION # 28

Quantities of flammable liquid storage in a control area of an S Occupancy may be doubled when:

- A. the building is protected with automatic sprinklers.
- B. the control area exceeds 50,000 sq. ft.
- C. the control area is provided with exhaust ventilation in accordance with fire code requirements.
- D. permission is granted by the chief.

Answer: A

Explanation:

The storage of flammable liquids in control areas within an S Occupancy (Storage Occupancy) is governed by the 2021 International Fire Code (IFC), Section 5003 - Hazardous Materials, and Table 5003.1.1(1).

IFC Section 5003.1.1(1) - Maximum Allowable Quantity (MAQ) Adjustments:

The maximum allowable quantity (MAQ) of flammable liquids in a control area may be doubled if an approved automatic sprinkler system is installed throughout the building.

Why Other Options Are Incorrect?

A: Permission is granted by the chief.

Fire officials can enforce code requirements but do not have the authority to override MAQ limits unless explicitly allowed in the code.

B: The control area exceeds 50,000 sq. ft.

The code does not specify an increase based solely on size; the sprinkler system is the determining factor.

D: The control area is provided with exhaust ventilation in accordance with fire code requirements.

While ventilation is important for hazardous material safety, it does not allow for an increase in the maximum storage quantity.

NEW QUESTION # 29

Where requirements for fire safety are not specifically provided for by the International Fire Code, which of the following shall have the responsibility to determine the applicable requirements?

- A. Legal counsel.
- B. Fire code official.
- C. City manager.
- D. Board of appeals.

Answer: B

Explanation:

According to the International Fire Code (IFC) 2021, when specific fire safety requirements are not explicitly provided for in the code, the responsibility to determine the applicable requirements falls upon the Fire Code Official.

Reference from the IFC (2021):

IFC Section 104.1 - General Authority and Responsibilities:

This section explicitly grants the Fire Code Official the authority to interpret the code and determine the necessary safety measures in cases where the code does not provide specific guidance.

It states: "The fire code official is hereby authorized to enforce the provisions of this code and shall have the authority to render interpretations of the code and to adopt policies and procedures in order to clarify the application of its provisions." IFC Section 104.9 - Alternative Materials and Methods:

This section further supports the authority of the Fire Code Official by allowing them to approve alternative fire safety measures when strict compliance with the code is not feasible.

Why Other Options Are Incorrect?

A: City Manager:

The city manager is responsible for administrative and operational management but does not have the authority to interpret or enforce fire code requirements.

B: Legal Counsel:

Legal counsel provides legal advice but does not have jurisdiction over fire safety code enforcement.

C: Board of Appeals:

The board of appeals reviews disputes and interpretations made by the Fire Code Official, but they do not have primary responsibility for determining applicable fire safety requirements.

Final Conclusion:

The Fire Code Official is the designated authority responsible for interpreting and applying fire safety requirements in situations where the International Fire Code (IFC) does not explicitly provide specific provisions.

NEW QUESTION # 30

The occupant load of an R-2 building's common patio area is to be calculated using the value:

- A. 11 gross per person.
- B. assigned by the code official.
- C. 50 net per person.
- D. 15 gross per person.

Answer: D

Explanation:

The occupant load for an R-2 building's common patio area must be calculated using an occupant load factor.

The correct factor is 15 gross sq. ft. per person.

Reference to Fire Inspector Documentation:

1. 2021 International Building Code (IBC) - Table 1004.5 (Occupant Load Factor) For outdoor areas (such as patios and terraces), the applicable factor is 15 gross sq. ft. per person.

2. 2021 International Fire Code (IFC) - Section 1004.5 (Outdoor Occupant Loads) The 15 gross per person requirement is applied to common outdoor gathering areas in residential occupancies (R-2).

Detailed Explanation of Answer Choices:

Option A (Incorrect): 50 net per person applies to storage areas, not patios.

Option B (Incorrect): 11 gross per person is used for business occupancies (B), not residential patios.

Option C (Correct): 15 gross per person is the correct calculation factor for common outdoor spaces in R-2 buildings.

Option D (Incorrect): The code official does not assign occupant load values arbitrarily-they follow IBC Table 1004.5.

Thus, the correct and verified answer is: C. 15 gross per person.

NEW QUESTION # 31

.....

These practice exams are solely designed to help you achieve Fire-Inspector-II certification on the first attempt. The mock exam simulator helps you get through every topic inside out and you get overall better grades. This is because you have hands-on the most updated and most reliable International Code Council Fire-Inspector-II Questions created under the supervision of 90,000 International Code Council professionals.
