The Itexamguide is one of the leading brands that have been helping CWNP CWAP-405 Certification aspirants for many years. Hundreds of CWNP Certified Wireless Analysis Professional exam applicants have achieved the Certified Wireless Analysis Professional in Procurement and Supply CWNP certification. All these successful CWNP test candidates have prepared with real and updated Certified Wireless Analysis Professional in Procurement and Supply CWNP Questions of Itexamguide. If you also want to become Certified Wireless Analysis Professional in Procurement and Supply CWNP certified, you should also prepare with our CWNP Certified Wireless Analysis Professional actual exam questions.

CWNP Certified Wireless Analysis Professional Sample Questions (Q67-Q72):

NEW QUESTION # 67
You must report on frame types seen on the WLAN. You want to list the frame types by both name and binary value.
What frame type is represented by the binary value 011010, which includes the Type and Subtype values?

- A. Association Request
- B. Authentication
- C. Beacon
- D. PS-Poll

Answer: D

NEW QUESTION # 68
The data rate for a data frame is 150 Mbps in 5 GHz.
What rate is used to transmit the PHY header information?

- A. 6 Mbps
- B. 75 Mbps
- C. 150 Mbps
- D. 1 Mbps

Answer: D

NEW QUESTION # 69
You are considering disabling the data rates of 1, 2, 5.5 and 11 in the 2.4 GHz band.
What advantage might this provide to the networks operating in this band?

- A. Frames that must be transmitted at the lowest common data rate can be transmitted at higher data rates after the change
- B. The range of the PHY preamble and header will be reduced
- C. The antennas will be able to zero in on the higher data rates better
- D. The RF signals will not travel as far

Answer: A

NEW QUESTION # 70
Which one of the following is not a valid acknowledgement frame?

- A. CTS
- B. RTS
- C. Ack
- D. Block Ack

Answer: B

Explanation:
RTS is not a valid acknowledgement frame. RTS stands for Request To Send, and it is a control frame that is used to initiate an RTS/CTS exchange before sending a data frame. The purpose of an RTS/CTS exchange is to reserve the medium for a data transmission and avoid collisions with hidden nodes. An acknowledgement frame is a control frame that is used to confirm the successful reception of a data frame or a block of data frames. The valid acknowledgement frames are CTS (Clear To Send), Ack

(Acknowledgement), and Block Ack (Block Acknowledgement) . NEW QUESTION # 71
How many frames are exchanged for 802.11 authentication in the 6 GHz band when WPA3-Enterprise is not used, and a passphrase is used instead?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:
Two frames are exchanged for 802.11 authentication in the 6 GHz band when WPA3-Enterprise is not used, and a passphrase is used instead. Authentication is a process that establishes an identity relationship between a STA (station) and an AP (access point) before joining a BSS (Basic Service Set). There are two types of authentication methods defined by 802.11: Open System Authentication and Shared Key Authentication.
Open System Authentication does not require any credentials or security information from a STA to join a BSS, and it consists of two frames: an Authentication Request frame sent by the STA to the AP, and an Authentication Response frame sent by the AP to the STA. Shared Key Authentication requires a shared secret key from a STA to join a BSS, and it consists of four frames: two challenge-response frames in addition to the request-response frames. However, Shared Key Authentication uses WEP (Wired Equivalent Privacy) as its encryption algorithm, which is insecure and deprecated. In the 6 GHz band, which is a newly available frequency band for WLANs, Shared Key Authentication is prohibited by the 802.11 standard, as it poses security and interference risks for other users and services in the band. The 6 GHz band requires all WLANs to use WPA3-Personal or WPA3-Enterprise encryption methods, which are more secure and robust than previous encryption methods such as WPA2 or WEP. WPA3-Personal uses a passphrase to derive a PMK (Pairwise Master Key), while WPA3-Enterprise uses an authentication server to obtain a PMK. Both methods use SAE (Simultaneous Authentication of Equals) as their authentication protocol, which replaces PSK (Pre-Shared Key) or EAP (Extensible Authentication Protocol). SAE consists of two frames: an SAE Commit frame sent by both parties to exchange elliptic curve parameters and nonces, and an SAE Confirm frame sent by both parties to verify each other's identities and generate a PMK. Therefore, when WPA3-Enterprise is not used, and a passphrase is used instead in the 6 GHz band, only two frames are exchanged for 802.11 authentication: an SAE Commit frame and an SAE Confirm frame.
