問題 #71

As a tester you are part of a development team for health monitoring system to record and synchronize various health parameters, calculate health score and provide practical advice on how to maintain and improve health. You are asked to review the acceptance criteria for the following user story:

US23; As a user of the system. I can monitor my blood pressure and obtain alerts in case of excessive pressure, in order to prevent the risk associated with hypertension.

Which of the following is NOT a good example of an acceptance criterion for this requirement?

- A. The monitoring system displays the heart rate together with the blood pressure
- B. The system should be developed using Java script framework to allow fast response times
- C. People with hypertension are advised to get their blood pressure checked at least thrice a week
- D. The alert thresholds depend on the following user's personal settings: age, weight and gender

答案：B

解題說明：

Acceptance criteria describe what the system must do to fulfill a requirement from the user or business perspective. They must be observable, testable, and relevant to the business outcome or expected behavior.

In this scenario, the user story is about monitoring blood pressure and receiving alerts for excessive pressure. The acceptance criteria should focus on system behavior, thresholds, and how alerts are triggered based on user settings. Option D is not a good acceptance criterion because: It specifies a technical implementation detail (JavaScript framework), which is not the concern of acceptance testing. Acceptance criteria should not prescribe how the system is built, but what it must do from a business or user point of view. Other options (A, B, and C) all reflect testable and behavior-focused outcomes linked to the user story's goal. D). The system should be developed using JavaScript framework to allow fast response times

問題 #72

Which one of the following test design techniques fits accepting testing purposes BEST?

- A. input validation
- B. defect-based test design
- C. equivalence partitioning
- D. static code analysis

答案: C

問題 #73

As a tester you participate in the project of the decision support system for granting a loan. You are asked to review the acceptance criteria for the following requirement:

REQ 3.28. The automated system records critical credit application data (CCAD) needed to support application screening.

Assume that it is well known what kind of data CCAD are. Which of the following would be the BEST example of an acceptance criterion for this requirement?

- A. The CCAD is not recorded if it is incomplete and a message is displayed.
- B. The CCAD record process is quick and reversible.
- C. The CCAD are stored in the MySQL relational database after each successful data entry procedure.
- D. The process for collecting CCAD meets corporate usability guidelines.

答案: C

解題說明:

Acceptance criteria must be concrete, testable, and focused on observable system behavior. They define what the system must do to satisfy a requirement and help determine whether the requirement has been successfully implemented.

REQ 3.28 states: "The automated system records critical credit application data (CCAD) needed to support application screening."

From this, we infer that the system must persistently store this data after data entry.

Option A is the best match because it provides a specific, observable behavior (CCAD being stored in a MySQL database after a successful entry) that can be verified through acceptance testing. It's a measurable outcome, aligned with the requirement's objective.

Other options are less suitable:

Option B introduces new behavior (displaying a message) not directly tied to the original requirement.

Option C is vague ("quick and reversible") and lacks measurable criteria.

Option D refers to usability guidelines, which is not directly relevant to the storage functionality stated in the requirement.

Exact Reference - ISTQB CTFL Acceptance Testing Syllabus (Section 1.3.2):

"Well-written acceptance criteria are unambiguous, testable, and focused on observable results."

問題 #74

What is considered as good practice regarding business process modeling?

- A. Business analysts should finalize their process models before showing them to acceptance testers.
- B. BPMN diagrams and DMN tables should include information such as traceability to user stories.
- C. Keeping all model element in one diagram considerably improves the readability of BPMN models.
- D. Links to requirements or risks should be well separated from the workflow description.

答案: B

問題 #75

How does ISTQB CTFL test activities relate to the IQBBA FL business analysis and requirements engineering activities?

- A. Business analysts who follow the IQBBA requirements engineering process will not be involved in designing test cases.
- B. The IQBBA solution evaluation phase precedes the ISTQB test implementation and test execution activities.
- **C. Test analysis and test design activities may result in changes of acceptance criteria.**
- D. Business analysts and tester have to decide, whether they follow the IQBBA or ISTQB lifecycle processes, because they exclude each other.

答案: C
