

Professional-Cloud-Developer Official Study Guide - Exam Professional-Cloud-Developer Study Guide

What's more, part of that TestkingPass Professional-Cloud-Developer dumps now are free: <https://drive.google.com/open?id=1VzsUkwS08pRB42Gbx0VaZlGfUjnzsrHM>

The Google Professional-Cloud-Developer certification exam is one of the hottest and career-oriented certifications in the market. This Google Certified Professional - Cloud Developer (Professional-Cloud-Developer) certification exam has been inspiring beginners and experienced professionals since its beginning. Over this long time period, countless Google Certified Professional - Cloud Developer (Professional-Cloud-Developer) exam candidates have passed their Google Certified Professional - Cloud Developer (Professional-Cloud-Developer) certification exam, and now they are offering their services to the top world brands.

The Google Certified Professional - Cloud Developer certification exam consists of multiple-choice and multiple-select questions that assess the candidate's understanding of key concepts and principles related to cloud-native application development on Google Cloud Platform. Professional-Cloud-Developer Exam Duration is two hours, and the passing score is 75%. The candidate will receive a digital badge and certificate upon successful completion of the exam, which can be shared on professional networking platforms like LinkedIn.

Perfect Professional-Cloud-Developer Official Study Guide Help You to Get Acquainted with Real Professional-Cloud-Developer Exam Simulation

TestkingPass publishes Google Professional-Cloud-Developer reliable practice exam vce online which is nearly 98% similar with the

real test. It is not only providing you valid questions and answers but also simulate scene like the real test. If you have bad mood while testing, you can choose to practice many times with Professional-Cloud-Developer reliable practice exam vce online, you will be used in exam feel, have a strong psychological diathesis, and finally get out of examination-phobia.

Google Certified Professional - Cloud Developer Sample Questions (Q214-Q219):

NEW QUESTION # 214

You are deploying a microservices application to Google Kubernetes Engine (GKE) that will broadcast livestreams. You expect unpredictable traffic patterns and large variations in the number of concurrent users. Your application must meet the following requirements:

- Scales automatically during popular events and maintains high availability

- Is resilient in the event of hardware failures

How should you configure the deployment parameters? (Choose two.)

- A. Distribute your workload evenly using multiple zonal node pools.
- B. Create a managed instance group for Compute Engine with the cluster nodes. Configure autoscaling rules for the managed instance group.
- C. Distribute your workload evenly using a multi-zonal node pool.
- D. Create alerting policies in Cloud Monitoring based on GKE CPU and memory utilization. Ask an on-duty engineer to scale the workload by executing a script when CPU and memory usage exceed predefined thresholds.
- E. Use cluster autoscaler to resize the number of nodes in the node pool, and use a Horizontal Pod Autoscaler to scale the workload.

Answer: C,E

Explanation:

https://cloud.google.com/kubernetes-engine/docs/concepts/planning-scalability#choosing_multi-zonal_or_single-zone_node_pools

NEW QUESTION # 215

You are developing an application that needs to connect to a Cloud SQL for PostgreSQL database by using the Cloud SQL Auth Proxy. The Cloud SQL Auth Proxy is hosted in a different Google Cloud VPC network. The Cloud SQL for PostgreSQL instance has public and private IP addresses. You are required to use the private IP for security reasons. When testing the connection to the Cloud SQL instance, you can connect by using the public IP address, but you are unable to connect by using the private IP address. How should you fix this issue?

- A. Add the --private-ip option when starting the Cloud SQL Auth Proxy.
- B. Grant yourself the IAM role that provides access to the Cloud SQL instance.
- C. Set up VPC Network Peering between your VPC and the VPC where the Cloud SQL instance is deployed.
- D. Run the Cloud SQL Auth Proxy as a background service.

Answer: C

Explanation:

VPC Network Peering is required to enable private IP connectivity between resources in different VPC networks. Without peering, you cannot reach the private IP address of the Cloud SQL instance from another VPC.

NEW QUESTION # 216

Your code is running on Cloud Functions in project A.

It is supposed to write an object in a Cloud Storage bucket owned by project B.

However, the write call is failing with the error "403 Forbidden".

What should you do to correct the problem?

- A. Grant your user account the roles/storage.objectCreator role for the Cloud Storage bucket.
- B. Grant your user account the roles/iam.serviceAccountUser role for the service-PROJECTA@gcf-adminrobot.iam.gserviceaccount.com service account.
- C. Grant the service-PROJECTA@gcf-admin-robot.iam.gserviceaccount.com service account the roles/

storage.objectCreator role for the Cloud Storage bucket.

- D. Enable the Cloud Storage API in project B.

Answer: B

NEW QUESTION # 217

You are using Cloud Build for your CI/CD pipeline to complete several tasks, including copying certain files to Compute Engine virtual machines. Your pipeline requires a flat file that is generated in one builder in the pipeline to be accessible by subsequent builders in the same pipeline. How should you store the file so that all the builders in the pipeline can access it?

- A. Output the file contents to a file in /workspace. Read from the same /workspace file in the subsequent build step.
- B. Add a build argument that runs an HTTP POST via curl to a separate web server to persist the value in one builder. Use an HTTP GET via curl from the subsequent build step to read the value.
- C. Store and retrieve the file contents using Compute Engine instance metadata.
- D. Use gsutil to output the file contents to a Cloud Storage object. Read from the same object in the subsequent build step.

Answer: A

Explanation:

<https://cloud.google.com/build/docs/build-config-file-schema>

NEW QUESTION # 218

You are developing an ecommerce web application that uses App Engine standard environment and Memorystore for Redis. When a user logs into the app, the application caches the user's information (e.g., session, name, address, preferences), which is stored for quick retrieval during checkout.

While testing your application in a browser, you get a 502 Bad Gateway error. You have determined that the application is not connecting to Memorystore. What is the reason for this error?

- A. The firewall rule allowing a connection between App Engine and Memorystore was removed during an infrastructure update by the DevOps team.
- B. Your Memorystore for Redis instance was deployed without a public IP address.
- C. You configured your application to use a Serverless VPC Access connector on a different subnet in a different availability zone than your App Engine instance.
- D. You configured your Serverless VPC Access connector in a different region than your App Engine instance.

Answer: D

Explanation:

<https://cloud.google.com/vpc/docs/configure-serverless-vpc-access>

In the Region field, select a region for your connector. This must match the region of your serverless service.

If your service or job is in the region us-central or europe-west, use us-central1 or europe-west1.

NEW QUESTION # 219

.....

As we all know, time for preparing a exam is quite tight. Once you have signed up for the exam, you need to prepare. Therefore improving the efficiency is quite necessary. Our Professional-Cloud-Developer training materials include the main knowledge point of the exam, which will help you to know the main knowledge. Besides the professionals check the Professional-Cloud-Developer at time, it can ensure the accuracy of the answers. Therefore, please make it easy to use the Professional-Cloud-Developer training materials freely.
