Configuring Windows Server Hybrid Advanced Services (AZ-801) practice test software is compatible with windows and the web-based software will work on many operating systems.

Microsoft Configuring Windows Server Hybrid Advanced Services Sample Questions (Q168-Q173):

NEW QUESTION # 168

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it as a result, these questions will not appear in the review screen.

You have an on-premises server named Server1 that runs Windows Server.

You have a Microsoft Sentinel instance.

You add the Windows Firewall data connector in Microsoft Sentinel.

You need to ensure that Microsoft Sentinel can collect Windows Firewall logs from Server1.

Solution: You install the Azure Connected Machine agent on Server1.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

NEW QUESTION # 169

You have a server that runs Windows Server and has the Web Server (IIS) server role installed. Server1 hosts a single website that has the following configurations:

- * Is accessible by using a URL of <https://www.contoso.com:8443> and has an SSL certificate that was issued by a third-party certification authority (CA) in the Microsoft Trusted Root Program
- * Uses anonymous authentication
- * Was developed by using PHP

You plan to use APP Service Migration Assistant to migrate the website to Azure App Service.

You need to migrate the website. The solution must minimize the number of changes made to the existing website.

What should you do manually to ensure that the website migration is successful? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

The screenshot shows the APP Service Migration Assistant interface. Under 'On Server1', the options are: 'Change the authentication method.', 'Change the listening port of the website.', and 'Redevelop the website code by using ASP.NET.'. Under 'In Azure', the options are: 'Create an App Service plan.', 'Copy the source files of the website.', and 'Configure a certificate and a custom domain name.'.

Answer:

Explanation:

The screenshot shows the APP Service Migration Assistant interface with the correct options highlighted. Under 'On Server1', the options are: 'Change the authentication method.', 'Change the listening port of the website.', and 'Redevelop the website code by using ASP.NET.'. Under 'In Azure', the options are: 'Create an App Service plan.', 'Copy the source files of the website.', and 'Configure a certificate and a custom domain name.'.

Explanation:

Graphical user interface, text, application Description automatically generated

NEW QUESTION # 170

You have an on-premises IIS web server that hosts a web app named App1. You plan to migrate App1 to a container and run the container in Azure. You need to perform the following tasks:

- * Export App1 to a ZIP file.
- * Create a container image based on App1.

The solution must minimize administrative effort.

Azure Migrate	Answer Area  Export App1 to a ZIP file: <input type="text" value="Tool"/> Create a container image with App1: <input type="text" value="Tool"/>
The Azure portal	
Web Deploy	
Windows Admin Center	
Windows Server Migration Tools	

Answer:

Explanation:

Azure Migrate	Answer Area  Export App1 to a ZIP file: <input type="text" value="Azure Migrate"/> Create a container image with App1: <input type="text" value="Web Deploy"/>
The Azure portal	
Web Deploy	
Windows Admin Center	
Windows Server Migration Tools	

Explanation

Azure Migrate

Web deploy

NEW QUESTION # 171

You have an Azure virtual machine named VM1 that runs Windows Server. VM1 has boot diagnostics configured to use a managed storage account.

You are troubleshooting connectivity issue on VM1.

You need to run a PowerShell cmdlet on VM1 by using the Azure Serial Console.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions From the Azure portal, configure the Boot diagnostics settings for VM1 to use a custom storage account. From the Azure portal, open the Run command blade. From the Azure portal, open the Serial console blade of VM1. From the Azure portal, enable just in time (JIT) VM access to VM1. From the Serial console, run <code>ch -si 1</code> and sign in by using a local account. From the Serial console, run <code>cmd</code> .	Answer Area
----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------

Answer:

Explanation:
