Quiz 2026 AZ-801: Configuring Windows Server Hybrid Advanced Services – The Best Top Questions

The Microsoft AZ-801 certification exam is a valuable asset for beginners and seasonal professionals. If you want to improve your career prospects then AZ-801 certification is a step in the right direction. Whether you're just starting your career or looking to advance your career, the Microsoft AZ-801 Certification Exam is the right choice.

Microsoft AZ-801 Exam is a challenging but rewarding certification for IT professionals looking to enhance their skills and demonstrate expertise in configuring and managing advanced hybrid services in a Windows Server environment. Candidates who pass the exam will have a deep understanding of Azure and Windows Server, and will be able to design and implement complex hybrid solutions that meet the needs of their organization.

Microsoft Configuring Windows Server Hybrid Advanced Services Sample Questions (Q192-Q197):

NEW QUESTION # 192

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a failover cluster named Cluster1 that hosts an application named App1.

The General tab in App1 Properties is shown in the General exhibit. (Click the General tab.)

The Failover tab in App1 Properties is shown in the Failover exhibit. (Click the Failover tab.)

Server1 shuts down unexpectedly.

You need to ensure that when you start Server1, App1 continues to run on Server2.
Solution: You increase Maximum failures in the specified period for the App1 cluster role.
Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

The Maximum failures setting is used to determine when the cluster determines that a node is offline. It does not affect whether a cluster will fail back when a node comes online.

NEW QUESTION # 193

You have two servers that have the Web Server (IIS) server role installed. The servers are configured as shown in the following table.

Both servers are configured to enable website deployment by using the Web Deployment Tool. Server1 hosts a website named Site1 that has Web Deploy Publishing configured.

You plan to migrate Site1 to Server2.

You need to perform a pull synchronization of Site1 by using the Web Deployment Agent Service.

How should you complete the command? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 194

Your network contains an Active Directory Domain Services (AD DS) domain that has the Active Directory Recycle Bin enabled.

All domain controllers are backed up daily.

You accidentally remove all the users from a domain group.

You need to get a list of the users that were previously in the group.

Which four actions should you perform in sequence from a domain controller? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

NEW QUESTION # 195

You have the servers shown in the following table.

You plan to migrate file shares from Server1 to Server2.

Answer:

Explanation:

NEW QUESTION # 196

You have an Azure Active Directory Domain Services (Azure AD DS) domain named aadds.contoso.com.

You have an Azure virtual network named Vnet1. Vnet1 contains two virtual machines named VM1 and VM2 that run Windows Server. VM1 and VM2 are joined to aadds.contoso.com.

You create a new Azure virtual network named Vnet2. You add a new server named VM3 to Vnet2. When you attempt to join VM3 to aadds.contoso.com, you get an error message that the domain cannot be found. You need to ensure that you can join VM3 to aadds.contoso.com.

Answer:

Explanation:

NEW QUESTION # 197
