Apple Deployment and Management Exam Sample Questions (Q207-Q212):

NEW QUESTION # 207

What's the benefit of using content caching?

- A. Improves network performance
- B. Enhances device security
- C. Separates personal and managed data
- D. Simplifies enrollment

Answer: A

Explanation:

Content caching on a Mac improves network performance by storing frequently accessed content (e.g., app updates, iCloud data) locally, reducing internet bandwidth usage and speeding up downloads for connected devices. It doesn't enhance security (option A), separate data (option C, a User Enrollment feature), or simplify enrollment (option D, an ADE benefit). The Apple Platform Deployment Guide emphasizes bandwidth optimization as the primary benefit of content caching.

Reference: Apple Platform Deployment Guide (Chapter: Content Caching).

NEW QUESTION # 208

Which feature prevents a wiped device from being reactivated without authorization?

- A. iCloud
- **B. Activation Lock**
- C. MDM
- D. Find My

Answer: B

Explanation:

Activation Lock is a security feature tied to a user's Apple ID or Managed Apple ID that prevents a wiped device from being reactivated without the original credentials or organizational authorization (via MDM or ABM/ASM). It's automatically enabled when Find My is active on a device with an Apple ID. Find My (option B) enables locating and wiping but doesn't enforce reactivation protection alone. MDM (option C) can manage Activation Lock but isn't the feature itself. iCloud (option D) supports Activation Lock but isn't the feature. The Apple Platform Security Guide explains Activation Lock's role in theft deterrence.

NEW QUESTION # 209

Your organization buys devices from a new Apple Authorized Reseller. You want to ensure that your devices appear in Apple Business Manager or Apple School Manager. What information do you need to add in Apple Business Manager or Apple School Manager?

- A. D-U-N-S Number
- B. Purchase Order Number
- C. Organization ID
- **D. Reseller Number**

Answer: D

Explanation:

To link a new Apple Authorized Reseller to your Apple Business Manager (ABM) or Apple School Manager (ASM) account, you must add the reseller's Reseller Number (also known as the Apple Customer Number).

The Apple Business Manager User Guide states, "To ensure devices purchased from a new Apple Authorized Reseller appear in Apple Business Manager, add the reseller's Reseller Number in the 'Resellers' section of your account settings." Option B (Organization ID) is provided to the reseller, not added in ABM/ASM, while A and C are not required for this purpose.

NEW QUESTION # 210

What can be used to report state changes without requiring MDM device polling?

- **A. Declarative device management**
- B. Device supervision status
- C. Automated Device Enrollment
- D. Network relay

Answer: A

Explanation:

Declarative Device Management (DDM) reports changes proactively. The Mobile Device Management Protocol Reference states,

"Declarative Device Management enables devices to report state changes to MDM without polling, improving efficiency."

References:

Mobile Device Management Protocol Reference, "Declarative Management" section.

Apple Platform Deployment Guide, "DDM Overview" section.

NEW QUESTION # 211

What's the benefit of using Managed Distribution?

- **A. Enables app license management**
- B. Separates personal and managed data
- C. Simplifies enrollment
- D. Allows personalization

Answer: A

Explanation:

Managed Distribution, available through Apple Business Manager or Apple School Manager, enables app license management by allowing organizations to purchase, assign, and revoke app licenses centrally. This ensures efficient use of licenses, reassignment as needed, and compliance with licensing terms. Personalization (option A) is unrelated to distribution. Data separation (option C) is a feature of User Enrollment, not Managed Distribution. Simplified enrollment (option D) pertains to ADE, not app management. The Apple Business Manager User Guide highlights license management as the primary benefit.
