Salesforce AP-211 Practice Exams for Thorough Preparation

What was your original intention of choosing a product? I believe that you must have something you want to get. AP-211 exam materials allow you to have greater protection on your dreams. This is due to the high passing rate of our AP-211 study questions which is high as 98% to 100%. And our AP-211 exam questions own a high quality which is easy to understand and practice. At the same time, our price is charming. Just come and buy it!

Salesforce Health Cloud Accredited Professional Sample Questions (Q55-Q60):

NEW QUESTION # 55

A provider is looking to view a patient's insurance coverage, including co-pay and deductible information, prior to their appointment. Using Health Cloud, which two steps should a consultant take to access this information in the Benefit Verification component? Choose 2 answers

- A. Configure the link to the clearinghouse's endpoint using a Uniform Resource Identifier (URI) path.
- B. Configure the Connection Label with the source system's API details.
- C. Create a named credential to support authenticated callouts.
- D. Create a new record for the HCBenVerConnect custom setting.

Answer: B,C

Explanation:

To access a patient's insurance coverage, co-pay, and deductible information in the Benefit Verification component of Health Cloud, you need to integrate with external systems (e.g., payers or clearinghouses). Health Cloud provides the Benefit Verification component, which relies on secure API integrations for real-time eligibility and benefits checks.

Step-by-Step Reference:

Configure the Connection Label with the source system's API details:

Extract:

"In Benefit Verification setup, specify the Connection Label and configure the external endpoint and API details to connect to the benefit verification source system." (Source: Administer Health Cloud - Benefit Verification Setup) Create a named credential to support authenticated callouts:

Extract:

"Use Named Credentials to securely store authentication settings and endpoint information for callouts to external services (such as clearinghouses or payers) required for benefit verification." (Source: Salesforce Security Guide and Administer Health Cloud - Benefit Verification) Why not A or B?

The HCBenVerConnect custom setting is not part of the standard configuration for the out-of-the-box Benefit Verification component.

Configuring a URI path alone (without API details and credentials) does not enable secure, authenticated communication.

NEW QUESTION # 56

Bloomington Caregivers is currently in the process of updating its systems as part of a corporate-wide digital transformation initiative. Which two considerations should a consultant include when configuring security, sharing, and visibility rules in Health Cloud to meet a healthcare organization's needs?

Choose 2 answers

- A. Regularly review and update security, sharing, and visibility settings in Health Cloud to align with evolving needs, regulations, and organizational policies.
- B. Review Salesforce documentation and implement a standardized security and visibility model.
- C. Ensure that data mask is used in production to appropriately manage protected health information (PHI).
- D. Understand customer needs, data security, privacy concerns, regulatory compliance, and sharing or visibility restrictions.

Answer: A,D

Explanation:

When configuring security, sharing, and visibility in Salesforce Health Cloud, consultants must consider healthcare-specific requirements such as HIPAA, GDPR, and organizational policies. Two critical considerations are:

B . Understand customer needs, data security, privacy concerns, regulatory compliance, and sharing or visibility restrictions.

Healthcare data involves PHI (Protected Health Information), which requires strict compliance with HIPAA and regional regulations. Consultants must tailor security models to meet specific privacy and compliance requirements.

C . Regularly review and update security, sharing, and visibility settings in Health Cloud to align with evolving needs, regulations, and organizational policies.

Regulations change, and so do organizational needs. Security and sharing rules must be reviewed and updated periodically to ensure ongoing compliance and relevance.

Why not the others?

A . Ensure that data mask is used in production to appropriately manage PHI.

Salesforce Data Mask is a tool for sandbox data anonymization, not for production. PHI in production should be secured using encryption, field-level security, and sharing rules-not Data Mask.

D . Review Salesforce documentation and implement a standardized security and visibility model.

While documentation is helpful, healthcare organizations require tailored security models that fit unique compliance and data access needs, not a one-size-fits-all model.

Salesforce Health Cloud Reference:

Salesforce Health Cloud Security & Compliance Guidance:

"When configuring Health Cloud, ensure security models reflect customer needs, privacy concerns, and regulatory compliance (HIPAA, GDPR, etc.)."

"Review and update security, sharing, and visibility models regularly to address evolving business, regulatory, and compliance requirements."

NEW QUESTION # 57

Bloomington Caregivers has been using the legacy Health Cloud electronic health record (EHR) data model and wants to move to the FHIR R4 clinical data model.

Which two steps should a consultant take to complete this?

- A. Use the Health Cloud Clinical Transition tool.
- B. Map objects and fields to the target objects.
- C. Use Data Loader to load the respective data.
- D. Leverage the Health Cloud FHIR API.

Answer: A,B

NEW QUESTION # 58

A payer needs to triage provider and care team inquiries around member plan benefits and member care. The agents also need to be informed about changes in records that require attention.

Which three permission set licenses should a consultant assign to the security model for these users?

- A. Contact Center for Health Cloud permission set license
- B. OmniStudio User permission set license
- C. CRM Content User permission set license
- D. Health Cloud Platform permission set license
- E. Service Cloud User permission set license

Answer: A,B,D

NEW QUESTION # 59

Bloomington Caregivers is implementing Home Health scheduling with Health Cloud. It must ensure that those who need to schedule the visits have the right permission set license.

Which permission set license should a consultant assign in this scenario?

- A. Manage Home Health
- B. Healthcare Visit Manager
- C. Field Dispatch Scheduler
- D. Execute Health Scheduling

Answer: A

NEW QUESTION # 60

.....

If you haplessly fail the AP-211 exam, we treat it as our responsibility then give you full refund and get other version of AP-211 practice material for free. That is why we win a great deal of customers around the world. Especially for those time-sensitive and busy candidates, all three versions of AP-211 Exam Questions can be chosen based on your preference. Such as app version of our AP-211 learning guide, you can learn it using your phone without the limitation of place or time.
