Salesforce Certified Sharing and Visibility Architect Sample Questions (Q53-Q58):

NEW QUESTION # 53

Universal Containers has a Performance Feedback custom object (Private organization-wide default) used by customers to report any Issues with delivery drivers. Feedback should not be visible to the driver, but any feedback records should be accessible to people above them in the Role Hierarchy, even when the driver changes managers. Assuming managers have Read access to the Feedback object, which three steps are necessary to solve these requirements?

- A. Remove Read permission on the Driver profile, have feedback ownership transferred to the driver when feedback is submitted, and create an ownership-based sharing rule,
- B. Remove Read permission on the Driver profile, have feedback ownership transferred to the driver when feedback is submitted, and use the Role Hierarchy to give access to 4 driver's manager.
- C. Remove Read permission on the Driver profile, have feedback ownership transferred to the driver's manager when feedback is submitted, and use the Role Hierarchy to give access to a driver's manager.

Answer: A

Explanation:

Explanation

Removing Read permission on the Driver profile will prevent the driver from seeing any feedback records, regardless of ownership. Having feedback ownership transferred to the driver when feedback is submitted will not prevent the driver from seeing their own feedback records. Using the Role Hierarchy to give access to a driver's manager will not work if the driver changes managers, as the feedback records will still be owned by the previous manager. The best option is to create an ownership-based sharing rule that grants Read access to the feedback records owned by drivers in a specific role or public group to users in roles above them

NEW QUESTION # 54

Universal Containers has enabled External Default Sharing and wants to allow for external users to have the External Sharing Default set to Public Read-Only for a custom object. Which two options are valid Internal Default sharing settings for the custom object?

- A. Private
- B. Public Read Only
- C. Public Read/Write
- D. Controlled by Parent

Answer: B,C

NEW QUESTION # 55

Universal Containers uses Person Accounts to represent retail customers and Business Accounts to represent commercial customers. The retail sales team should not have access to commercial customers but should have access to ALL retail customers. With the organization-wide default on Account set to Private, how should the architect meet these requirements?

- A. @ Create o criteria-based sharing rule giving the Retail Sales role access to Accounts of type PersonAccount.
- B. Update the Retail Sales profile to grant access to Person Account record type.
- C. Create an owner-based sharing rule on AccountContactRelation to grant a@coess to all account contact roles records owned by retail sales reps.

Answer: A

NEW QUESTION # 56

A custom Invoice object has been created with a master-detail relationship to Account. The accounts receivable (AR) team needs access to invoice records. AR users neither own nor have access to account records. The Account organization-wide default is set to Private. The AR team is unable to find invoices in list views, reports, and Global Search. The architect has been asked to help troubleshoot.

What is preventing AR team members from seeing invoices?

- A. A sharing rule is missing to share invoices with the AR team.
- B. The AR profile does not have Read permission to the Invoice object.
- **C. A sharing rule is missing to share accounts with the AR team.**

Answer: C

NEW QUESTION # 57

Sales operations at Universal Containers (UC) wants to create list views to filter opportunities for certain geographies. How should UC hide list views that are not relevant to an individual user since there will be more than 50 list views?

- A. Share the list views with the appropriate individual users.
- **B. Share the list views with the appropriate role and internal subordinates.**
- C. Share the list views with the appropriate queue.

Answer: B

Explanation:

* List View Sharing: Salesforce allows list views to be shared with roles, roles and subordinates, public groups, or individual users. To manage visibility of list views for users effectively, sharing with roles and internal subordinates ensures only relevant users within the organizational hierarchy see the list views.

* Why Option A is Correct:

* Sharing with roles and internal subordinates limits access to users in specific roles and their reporting lines, reducing clutter for irrelevant users.

* This method is scalable for organizations with many list views and users.

* Why Others Are Incorrect:

* Option B: Sharing with individual users is not scalable when there are numerous list views and users.

* Option C: Queues are not used to manage list view sharing in this scenario.

For more details, refer to Salesforce documentation on managing list view visibility: <https://help.salesforce.com/>
