Cisco Small and Medium Business Engineer Sample Questions (Q59-Q64):

NEW QUESTION # 59

Which Cisco solution is crucial for securing SMB's remote work environments?

- A. Cisco Firepower
- B. Cisco Nexus
- C. Cisco Duo
- D. Cisco AnyConnect

Answer: C

Explanation:

Comprehensive and Detailed In-Depth Explanation: Cisco Duo is a crucial solution for securing SMBs' remote work environments due to its focus on multi-factor authentication (MFA) and zero-trust security.

Remote work increases risks like unauthorized access and phishing, especially for SMBs with limited security resources. Duo verifies user identities beyond passwords, ensuring only trusted users access applications and data, whether on-premises or in the cloud. Its ease of deployment and affordability make it ideal for SMBs, as demonstrated in cases like Sentara Healthcare, which reduced security costs by 75% while protecting remote users. Duo integrates with VPNs, cloud apps, and devices, providing a lightweight yet robust security layer tailored to the distributed nature of remote work.

* A. Cisco Firepower: While Firepower (next-generation firewalls) offers strong network security, it's more suited for on-premises or perimeter defense, not specifically optimized for remote user authentication.

* C. Cisco AnyConnect: This VPN solution secures remote connections but lacks MFA natively (though it integrates with Duo), making it less comprehensive alone for remote security.

* D. Cisco Nexus: A data center switching platform, Nexus is irrelevant to securing remote work environments, focusing instead on infrastructure performance.

Cisco Duo (B) stands out as the go-to solution for SMB remote security due to its targeted, user-centric approach.

(cisco.com/go/secureremotework) highlight Duo's role, supported by the 700-750 SMBE exam topics on securing hybrid and remote workforces.

NEW QUESTION # 60

How do Meraki cameras perform in the smart SMB experience?

- **A. counting people**
- B. recording videos
- C. recording room temperature
- D. schedule policies for recording

Answer: A

Explanation:

Cisco Meraki cameras are designed to provide enhanced security and business insights for SMBs. They do not record room temperature, as their primary function is not environmental monitoring. While they do record videos, this is a standard feature of most security cameras and not unique to the smart SMB experience.

Scheduling policies for recording is also a feature, but it is not highlighted as a key performance aspect in the context of smart SMB experience. The distinguishing feature of Meraki cameras in a smart SMB setup is their ability to count people¹. This is part of the advanced analytics capabilities that Meraki cameras offer, which include motion heatmaps, historical person tracking, and intelligent motion indexing. These features are particularly useful for businesses to gain insights into customer behavior, occupancy, and usage patterns.

NEW QUESTION # 61

How does Cisco empower SMBs to leverage market trends?

- **A. By providing tailored technological solutions**
- B. By offering competitive pricing only
- C. By limiting access to new technologies
- D. By reducing their market presence

Answer: A

Explanation:

Comprehensive and Detailed In-Depth Explanation: Cisco empowers SMBs to leverage market trends by providing tailored technological solutions that address evolving needs like hybrid work, cybersecurity, and digital transformation. Products like Cisco Meraki (cloud-managed networking), Webex (collaboration), and Umbrella (security) are designed with SMBs in mind-offering simplicity, scalability, and affordability to capitalize on trends such as remote work or cloud adoption. Cisco's SMB strategy includes partner enablement (e.g., SMB Specialization) and tools like Business Value Demonstrations, ensuring solutions fit specific SMB goals, whether it's enhancing customer experiences or improving operational efficiency. This approach helps SMBs stay competitive in a dynamic market.

* A. By offering competitive pricing only: While pricing is a factor, Cisco's empowerment goes beyond cost, focusing on technology value and outcomes, not just affordability.

* B. By reducing their market presence: This contradicts Cisco's goal of expanding SMB market reach through partners and solutions.

* D. By limiting access to new technologies: Cisco accelerates SMB access to innovations (e.g., AI- driven analytics, SD-WAN), not restricts it.

Providing tailored technological solutions (C) is the core of Cisco's SMB empowerment strategy.

References: Cisco's SMB Technology Solutions page (cisco.com/go/smb) and case studies like Mike's Bikes show tailored solutions addressing market trends, aligned with the 700-750 SMBE exam focus on SMB market strategies.

NEW QUESTION # 62

What is a benefit of securing remote SMBs?

- A. optimizes application performance
- B. monitors only the top five applications connection to optimize capacity proactively
- C. provides zero issues with connectivity to Applications

- D. enables the ability to create and execute policy and system compliance

Answer: D

Explanation:

Securing remote SMBs allows for the creation and execution of policies and ensures system compliance. This is crucial for maintaining the integrity and security of the business's data and operations, especially when employees are accessing the network from various locations. Implementing robust security measures like two-factor authentication and secure Wi-Fi access with solutions such as Duo and Cisco Umbrella helps in safeguarding against unauthorized access and potential breaches¹. NEW QUESTION # 63

Which Cisco solution enables a hybrid experience and offers a VPN solution?

- A. cloud solution
- B. edge computing
- C. remote solution
- D. on-premises solution

Answer: D

Explanation:

Cisco's on-premises solutions, including their integrated services routers and security appliances, support the implementation of Virtual Private Networks (VPNs), which are crucial for creating a secure and encrypted connection over a less secure network, such as the internet. This becomes especially important for businesses adopting hybrid work models, where employees split their time between working on-site and remotely. The VPN solution allows remote workers to safely access the company's internal network, ensuring that sensitive data remains protected, even when accessed from outside the office. This hybrid experience is enabled by on-premises VPN solutions, as they provide the necessary infrastructure to support secure remote access.
