### **Salesforce Certified Sharing and Visibility Architect Sample Questions (Q12-Q17):**

#### **NEW QUESTION # 12**

Universal Containers would like to create a custom team solution that can be used on a custom Loan object. The following requirements must be met:

The Loan custom object should be set to Private in the Org-Wide Defaults.

Any user added to the Custom Team object should have Read Only access to the corresponding Loan record. If the Custom Team record is marked as "Primary" then the corresponding user should have Read/Edit access to the corresponding Loan record.

Which two methods will allow the Architect to meet the requirements?

Choose 2 answers.

- A. Create an owner-based sharing rule on the Custom Team object that will share the Loan record to the owner of the Custom Team record.
- B. Create a custom trigger on the Custom Team object that inserts or updates records in the Loan\_share object.
- C. Create Apex Sharing Reasons on the Loan object to identify the reason the Loan record was share.
- D. Create a criteria-based sharing rule on the Loan object that will share the Loan record with the appropriate user in the Custom Team object.

**Answer: A,D**

#### **NEW QUESTION # 13**

An architect from a previous project implemented Platform Shield Encryption for a company. However, based on a recent audit, the company's Privacy Team identified three additional fields in their Account Records (Billing Street, Billing City and Phone) that needs to be secure and protected.

How should an architect proceed with this new policy change?

- A. Use Encryption Policy and wait for an email from Salesforce indicating the field values are encrypted.
- B. Use Classic Encryption to ensure all fields are protected and contact Salesforce for help with encryption verification.
- C. Use Encryption Policy and contact Salesforce to update the existing records so that their field values are encrypted.

**Answer: C**

#### **NEW QUESTION # 14**

Universal Containers uses 75,000 distributors that have close to 1 million total users. Distributors need opportunities assigned to the distributor for delivery.

What license recommendation will meet distributor needs?

- A. Sales Cloud
- B. Customer Community Plus
- C. Partner Community

- D. Customer Community

**Answer: C**

Explanation:

Explanation

The license recommendation that will meet distributor needs is Partner Community. Partner Community licenses are designed for users who are not employees of UC, but are part of their partner ecosystem, such as distributors, resellers, or suppliers. Partner Community users can access standard CRM objects such as accounts, contacts, leads, opportunities, cases, and campaigns. They can also collaborate with other partners and UC employees using Chatter and Communities. Sales Cloud licenses are for internal sales users who need full access to standard CRM and custom objects. Customer Community Plus licenses are for high-volume customers who need access to standard CRM objects and custom objects, but not opportunities. Customer Community licenses are for low-volume customers who need access only to custom objects and a subset of standard CRM objects.

**NEW QUESTION # 15**

Universal Containers has selected a small and diverse group of users to review inactive accounts. Given the Private sharing model, a public group was created and made available to this group of users. A sharing rule was created to make inactive accounts visible to the public group. However, some of these users are reporting they do not see any of the accounts that were shared with the public group.

What is the underlying issue for these users?

- A. The page layout assigned to these users is different than the Account owner.
- B. The users are in profiles that have no access to the Account object.
- C. The accounts are owned by users higher in the Role Hierarchy.

**Answer: B**

**NEW QUESTION # 16**

Sales managers want their team members to help each other close Opportunities. The Opportunity and Account organization-wide defaults are private. To grant Opportunity access to sales reps on the same team, ownership-based sharing rules were created for each team.

What is the side effect of this approach?

- A. Sales Reps on the same team will have Edit access to the Accounts for Opportunities owned by their team members.
- B. Sales reps on the same team will have Read access to the Accounts for Opportunities owned by their team members.
- C. All sales reps will have Read access to Accounts for all Opportunities.
- D. All sales reps will have Read access to all Accounts.

**Answer: B**

Explanation:

Explanation

The side effect of this approach is that sales reps on the same team will have read access to the accounts for opportunities owned by their team members. This is because ownership-based sharing rules grant access to both the parent and child records of the same object. For example, if a sharing rule grants access to opportunities owned by a certain role, it also grants access to the accounts associated with those opportunities. All sales reps will not have read access to accounts for all opportunities, as the sharing rules are based on ownership. Sales reps on the same team will not have edit access to the accounts for opportunities owned by their team members, as ownership-based sharing rules only grant read or read/write access to child records, not parent records. All sales reps will not have read access to all accounts, as the account organization-wide default is private.

**NEW QUESTION # 17**

.....
