ACA-100 study guide & ACA-100 training torrent & ACA-100 free dumps

Our ACA-100 exam braindumps are famous for the advantage of high-efficiency and high-effective. And it is proved by the high pass rate. The 99% pass rate is a very proud result for us. If you join, you will become one of the 99% to pass the ACA-100 Exam and achieve the certification. Believe in yourself, you can do it! Buy ACA-100 study guide now and we will help you. Believe it won't be long before, you are the one who succeeded!

Appian Certified Analyst Sample Questions (Q42-Q47):

NEW QUESTION # 42
The business has requested a requirement that developers say will be difficult to build in Appian.
Which next step should the Appian Analyst take?

- A. Ask the Product Owner if the requirement can be deprioritized.
- B. Ask the developers to investigate workarounds or plug-ins to reduce the implementation effort.
- C. Ask the business about the underlying need for this feature, and provide alternate approaches that can achieve the same functionality.
- D. Use a mockup to illustrate alternatives with different user interfaces, and propose the alternatives to the business in the next requirements session.

Answer: C

Explanation:
When developers identify that a requested requirement will be difficult to build in Appian, the next step for the Appian Analyst is to engage with the business to understand the underlying need for the feature. By discussing the core objectives, the analyst can propose alternative approaches or solutions that are feasible within Appian's capabilities. This approach ensures that the business's needs are met while also aligning with the technical constraints of the platform.Appian Documentation - Requirements Gathering Note: Options A, C, and D may involve deprioritizing or investigating workarounds, but these steps should only be considered after thoroughly understanding the business requirement and exploring alternative solutions.

NEW QUESTION # 43
Which of the following is a key responsibility of a Product Owner in an Agile project?

- A. Prioritizing the product backlog
- B. Writing code for the application
- C. Designing the user interface
- D. Facilitating daily stand-up meetings

Answer: A

NEW QUESTION # 44
Users expressed that only managers should be able to see information related to a business object.
How should you translate this requirement into a user story?

- A. "As a manager, I need to be able to see a record type and navigate the details."
- B. "Only some of the data are available for managers."
- C. "As a manager, I need to build security options for records."
- D. "As a manager, I must be in the group to see the data."

Answer: A

Explanation:
The correct way to translate the requirement into a user story is to focus on the manager's ability to access and navigate the information related to the business object. This user story follows the standard format: "As a [role], I need to [action] so that [benefit]." In this case, the story captures the manager's need to view and interact with specific data.
User Story Format:
Role: Manager
Action: Ability to see and navigate a record type
Benefit: Ensures managers have the necessary access to perform their job duties Why Not Other Options?:
B . Focuses on building security options rather than the manager's need to access data.
C . Is vague and does not follow the standard user story format.
D . Focuses on group membership but is less specific about the action the manager needs to perform.
References:
Appian Documentation on User Stories: Writing User Stories
Using the correct user story format ensures that the development team clearly understands the requirement and how it benefits the end user.

NEW QUESTION # 45
According to best practices, which two types of tests should be considered during user acceptance testing (UAT)?

- A. Load testing

- B. Platform security testing
- C. Functional testing
- D. Regulation acceptance testing

Answer: C,D

Explanation:
Regulation Acceptance Testing (C): During User Acceptance Testing (UAT), it is essential to ensure that the application complies with industry regulations and standards. Regulation acceptance testing focuses on verifying that the system adheres to legal and compliance requirements specific to the industry or region where the application will be used. This ensures that the application meets all necessary regulatory guidelines before going live.Appian Documentation - Testing and Validation Functional Testing (D): Functional testing is a critical component of UAT as it verifies that the application's functionality works as expected from the end-user's perspective. This includes validating that all features, workflows, and business processes perform correctly according to the specified requirements. UAT is the final phase where end-users interact with the application to confirm that it meets their needs and performs as intended.Appian Documentation - Functional Testing Note: Load testing (A) and platform security testing (B) are important types of tests but are usually conducted during performance and security testing phases rather than UAT. UAT focuses more on ensuring the application meets business requirements and end-user expectations.

NEW QUESTION # 46
You are part of an Agile team, and your responsibilities and attributes include:
A keen understanding of the business, the customer, and the market
The ability to clearly express product backlog items
The ability to prioritize the backlog to optimize the value of what the team will deliver The ability to order the items in the product backlog to best achieve goals and missions.
What is your role name?

- A. Product Owner
- B. Appian Analyst
- C. Sponsor
- D. Scrum Master

Answer: A

Explanation:
The responsibilities and attributes described are aligned with the role of a Product Owner in an Agile team. The Product Owner is responsible for maximizing the value of the product resulting from the work of the development team. They have a deep understanding of the business, customer needs, and market trends, and they use this knowledge to manage and prioritize the product backlog.
Role of Product Owner:
Understanding the Business: The Product Owner must understand the business context to prioritize work that delivers the most value.
Expressing Product Backlog Items: The Product Owner is responsible for defining and clearly expressing the items in the product backlog.
Prioritizing and Ordering the Backlog: The Product Owner prioritizes and orders the backlog items to optimize the team's output and ensure alignment with business goals.
Why Not Other Options?:
A . Appian Analyst: While an Appian Analyst may have some similar responsibilities, the specific role of managing the product backlog and optimizing the value delivered by the team is the core responsibility of the Product Owner.
B . Scrum Master: The Scrum Master facilitates the Scrum process but does not manage the product backlog.
D . Sponsor: The Sponsor typically provides financial support and strategic direction but does not manage day-to-day product backlog activities.
