The pass rate is 98.65% for 220-1102 study guide, and you can pass the exam just one time. In order to build up your confidence for the exam, we are pass guarantee and money back guarantee. If you fail to pass the exam by using 220-1102 exam braindumps of us, we will give you full refund. Besides, 220-1102 learning materials are edited and verified by professional specialists, and therefore the quality can be guaranteed, and you can use them at ease. We have online and offline service. If you have any questions for 220-1102 Exam Materials, you can consult us, and we will give you reply as quick as possible.

CompTIA 220-1102 exam covers a wide range of topics, including installing and configuring operating systems, configuring network connectivity, implementing virtualization and cloud computing, and troubleshooting software and hardware problems. 220-1102 exam consists of 90 multiple-choice questions that are designed to test the candidate's knowledge and skills in the above-mentioned areas.

CompTIA A+ Certification Exam: Core 2, also known as the CompTIA 220-1102 Exam, is a certification exam designed to test the knowledge and skills of IT professionals in areas such as operating systems, security, software troubleshooting, and networking. 220-1102 exam is the second part of the CompTIA A+ certification, and it is aimed at those who have already passed the first part,

the CompTIA 220-1001 exam.

Pass Guaranteed Quiz 2026 Marvelous CompTIA New 220-1102 Test Discount

Perhaps you have seen too many 220-1102 exam questions on the market and you are tired now. But our 220-1102 preparation quiz can really give you a different feeling. We have conducted research specifically on the current youth market, so we are very clear about what young people like today. Our 220-1102 learning guide combine professional knowledge and trends to make you fall in love with learning!

CompTIA A+ Certification Exam: Core 2 Sample Questions (Q352-Q357):

NEW QUESTION # 352
A user requires local administrative access to a workstation. Which of the following Control Panel utilities allows the technician to grant access to the user?

- A. Network and Sharing Center
- B. System
- C. Security and Maintenance
- D. User Accounts

Answer: D

Explanation:
User Accounts is a Control Panel utility that allows the technician to manage user accounts and groups on a local computer. The technician can use this utility to add a user to the local administrators group, which grants the user local administrative access to the workstation. The other options are not relevant for this task.
References: : https://docs.microsoft.com/en-us/windows-server/identity/ad-fs/operations/manage-user- accounts-and-groups

NEW QUESTION # 353
Which of the following filesystems replaced FAT as the preferred filesystem for Microsoft Windows OS?

- A. ext4
- B. NTFS
- C. APFS
- D. FAT32

Answer: B

Explanation:
NTFS stands for New Technology File System and it is the preferred filesystem for Microsoft Windows OS since Windows NT 3.1 in 19931. NTFS replaced FAT (File Allocation Table) as the default filesystem for Windows because it offers many advantages over FAT, such as:
Support for larger volumes and files (up to 16 exabytes)2
Support for file compression, encryption, and permissions2
Support for journaling, which records changes to the filesystem and helps recover from errors2 Support for hard links, symbolic links, and mount points2 Support for long filenames and Unicode characters2 FAT32 is an improved version of FAT that supports larger volumes and files (up to 32 GB and 4 GB respectively) and is compatible with older versions of Windows and other operating systems3. However, FAT32 still has many limitations and drawbacks compared to NTFS, such as:
No support for file compression, encryption, and permissions3
No support for journaling, which makes it vulnerable to corruption and data loss3 No support for hard links, symbolic links, and mount points3 No support for long filenames and Unicode characters3 APFS (Apple File System) is the default filesystem for macOS, iOS, iPadOS, watchOS, and tvOS since 20174. APFS replaced HFS+ (Hierarchical File System Plus) as the preferred filesystem for Apple devices because it offers many advantages over HFS+, such as:
Support for larger volumes and files (up to 8 zettabytes)4
Support for file cloning, snapshots, and encryption4

Support for space sharing, which allows multiple volumes to share the same storage pool4 Support for fast directory sizing, which improves performance and efficiency4 ext4 (Fourth Extended Filesystem) is the default filesystem for most Linux distributions since 20085. ext4 replaced ext3 as the preferred filesystem for Linux because it offers many advantages over ext3, such as:

Support for larger volumes and files (up to 1 exabyte and 16 terabytes respectively)5 Support for extents, which reduce fragmentation and improve performance5 Support for journal checksumming, which improves reliability and reduces recovery time5 Support for delayed allocation, which improves efficiency and reduces metadata overhead5 Reference:

NEW QUESTION # 354

A technician requires graphical remote access to various Windows, Linux, and macOS desktops on the company LAN. The security administrator asks the technician to utilize a single software solution that does not require an external internet connection. Which of the following remote access tools is the technician most likely to install?

- **A. VNC**
- B. SSH
- C. RMM
- D. RDP

Answer: A

Explanation:

VNC (Virtual Network Computing) is a remote access tool that allows the technician to access and control various Windows, Linux, and macOS desktops on the company LAN using a graphical user interface. VNC does not require an external internet connection, as it works over a local network or a VPN. VNC uses a client-server model, where the server runs on the remote desktop and the client connects to it from another device. VNC can transmit the keyboard and mouse events from the client to the server, and the screen updates from the server to the client, enabling the technician to interact with the remote desktop as if it were local12.

VNC is a better option than the other choices because:

RMM (Remote Monitoring and Management) (B) is not a single software solution, but a category of software solutions that enable IT professionals to remotely monitor, manage, and troubleshoot multiple devices and networks. RMM software may include remote access tools, but also other features such as patch management, backup and recovery, security, reporting, and automation. RMM software may require an external internet connection, as it often relies on cloud-based services or web-based consoles34.

RDP (Remote Desktop Protocol) is a remote access tool that allows the technician to access and control Windows desktops on the company LAN using a graphical user interface. However, RDP is not compatible with Linux or macOS desktops, unless they have third-party software installed that can emulate or translate the RDP protocol. RDP also has some security and performance issues, such as encryption vulnerabilities, bandwidth consumption, and latency problems56.

SSH (Secure Shell) (D) is a remote access tool that allows the technician to access and control various Windows, Linux, and macOS desktops on the company LAN using a command-line interface. SSH does not require an external internet connection, as it works over a local network or a VPN. SSH uses encryption and authentication to secure the communication between the client and the server. However, SSH does not provide a graphical user interface, which may limit the functionality and usability of the remote desktop7 .

NEW QUESTION # 355

A technician needs to perform after-hours service starting at 10:00 p.m. The technician is currently 20 minutes late. The customer will also be late. Which of the following should the technician do considering proper communication techniques and professionalism?
* Do not notify the customer if arriving before the customer.

- **A. Disclose the experience via social media.**
- B. Contact the customer if the technician is arriving late.
- C. Dismiss the customer and proceed with the after-hours work.

Answer: A

Explanation:
The best option for the technician to demonstrate proper communication techniques and professionalism is to contact the customer if the technician is arriving late. This shows respect for the customer's time and expectations, and allows the customer to adjust their schedule accordingly. It also helps to maintain a positive relationship and trust between the technician and the customer. The technician should apologize for the delay and provide a realistic estimate of their arrival time. The technician should also thank the customer for their patience and understanding.
The other options are not appropriate or professional. Do not notify the customer if arriving before the customer is not a good practice, as it may cause confusion or frustration for the customer. The customer may have made other plans or arrangements based on the technician's original schedule, and may not be available or prepared for the service. Dismiss the customer and proceed with the after-hours work is rude and disrespectful, as it ignores the customer's needs and preferences. The customer may have questions or concerns about the service, or may want to supervise or verify the work. The technician should always communicate with the customer before, during, and after the service. Disclose the experience via social media is unethical and unprofessional, as it may violate the customer's privacy and the company's policies. The technician should not share any confidential or sensitive information about the customer or the service on social media, or make any negative or inappropriate comments about the customer or the situation.

NEW QUESTION # 356
A user is having issues with document-processing software on a Windows workstation. Other users that log in to the same device do not have the same issue.
Which of the following should a technician do to remediate the issue?

- A. Update the drivers.
- B. Rebuild the profile.
- C. Increase the page file.
- D. Roll back the updates.

Answer: B

Explanation:
Explanation
The issue is specific to the user's profile, so the technician should rebuild the profile. Rebuilding the profile will create a new profile and transfer the user's data to the new profile

NEW QUESTION # 357
......

If you are always complaining that you are too spread, are overwhelmed with the job at hand, and struggle to figure out how to prioritize your efforts, these would be the basic problem of low efficiency and production. You will never doubt anymore with our 220-1102 Test Prep. Moreover, we have experts to update 220-1102 quiz torrent in terms of theories and contents according to the changeable world on a daily basis, which can ensure that you are not falling behind of others by some slight knowledge gaps.
