NCP-MCA Latest Learning Materials, NCP-MCA Authorized Pdf

The Nutanix modern job market is becoming more and more competitive and challenging and if you are not ready for it then you cannot pursue a rewarding career. Take a smart move right now and enroll in the Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) (NCP-MCA) certification exam and strive hard to pass the Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) (NCP-MCA) certification exam. The Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) (NCP-MCA) certification exam offers you a unique opportunity to learn new in-demand skills and knowledge.

Nutanix NCP-MCA certification exam covers a wide range of topics, including hybrid and multicloud architecture, automation frameworks, and application lifecycle management. Candidates are tested on their abilities to design, deploy, and manage multicloud environments using Nutanix technology. Additionally, the exam evaluates candidates' knowledge of automation frameworks such as Terraform, Ansible, and Puppet, as well as their abilities to implement automation workflows and manage application lifecycles.

Certification Topics of Nutanix NCP-MCA Exam

- Describe and differentiate automation concepts and principles

- Deploy and configure Nutanix calm and related components

- Validate blueprints, playbooks, and automation settings

Nutanix - High Hit-Rate NCP-MCA Latest Learning Materials

We stress the primacy of customers' interests, and make all the preoccupation based on your needs on the NCP-MCA study materials. We assume all the responsibilities that our NCP-MCA practice braindumps may bring. They are a bunch of courteous staff waiting for offering help 24/7. You can definitely contact them when getting any questions related with our NCP-MCA Preparation quiz. And you will be satified by their professional guidance.

Obtaining the NCP-MCA certification demonstrates a professional's ability to manage and automate multicloud environments using Nutanix solutions. Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) certification also demonstrates an individual's commitment to staying up-to-date with the latest technologies and best practices in multicloud automation. Professionals who hold the NCP-MCA Certification are in high demand, as more organizations are adopting multicloud strategies and require professionals with the skills and knowledge to manage and automate these environments.

Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q53-Q58):

NEW QUESTION # 53
An administrator needs to reduce the number of vCPUs in a VM on the following Sunday at 1:00AM.
How can the administrator automate this task?

- A. Create a script to call a REST API and configure a cron job.
- B. Create a runbook triggered with an alert.
- C. Create a playbook triggered with an alert.
- D. Create a playbook triggered at a specified time.

Answer: D

Explanation:
To automate the reduction of vCPUs in a VM on a specific schedule, the administrator should create a playbook triggered at a specified time. This playbook can be scheduled to run at 1:00 AM on the following Sunday and perform the task of reducing the number of vCPUs in the VM.

* Nutanix documentation on Playbook Scheduling.
* Nutanix Best Practices for Automating VM Tasks.

NEW QUESTION # 54
A blueprint was developed for deploying a standard 3-tier hosting environment for a company's applications. The blueprint includes a load balancer, multiple web servers, a database server, and a small test application.
During testing of the blueprint, the application fails to connect to the database. The cause is found to be the database software is still installing when the application starts.
Which method most efficiently prevents the application from starting before the database?

- A. Use a local install instead of downloading
- B. Use a sleep statement in a start script
- C. Create a loop to retry connection
- D. Create a service dependency

Answer: D

NEW QUESTION # 55
An administrator needs to run a blueprint deployment and tasks in a different Prism Central (PC) instance than the PC instance running Self-Service (formerly Calm).
How should the administrator satisfy this requirement?

- A. Export the blueprint to the remote Prism Central.

- B. Add a remote Prism Element instance as an account.
- C. Add a remove Prism Central instance as an account.
- D. Export the package to the remote Prism Central.

Answer: C

Explanation:
To run a blueprint deployment and tasks in a different Prism Central instance than the one running Self-Service (formerly Calm), the administrator should add the remote Prism Central instance as an account. This configuration allows Self-Service to interact with multiple Prism Central instances, enabling the management and deployment of blueprints across different environments.

NEW QUESTION # 56
A developer has a Development Blueprint that performs the following high level items:
Creates a Windows and Ubuntu Server.
Installs IIS on Windows
Installs MySQL on Ubuntu
As part of Development, there is a need for an Operator to restart IIS Services for troubleshooting purposes.
How should the developer add this functionality to the Blueprint?

- A. Add an Execute Task in the Restart Action of the Windows/IIS Service.
- B. Create an Endpoint for the IIS server and a Runbook that restarts the service.
- C. Add a Delay Task in the Restart Action of the Windows/IIS Service.
- D. Add an Execute Task in the Restart Action of the Application Profile.

Answer: A

Explanation:
The Restart Action of a Service allows the developer to define custom tasks that will be executed when the service is restarted. An Execute Task can run any script or command on the target VM, such as restarting the IIS service. This way, the Operator can use the Self-Service Portal to restart the service without logging into the VM or using another tool.
References:
* Nutanix Certified Professional - Multicloud Automation (NCP-MCA) v6.5, Section 2, Objective 2.1:
Given a scenario, create a blueprint to deploy infrastructure and applications using Self-Service.
* Nutanix Certified Professional Multicloud Automation (NCP-MCA) 6 Exam, Page 11, Section 2, Objective 2.1: Given a scenario, create a blueprint to deploy infrastructure and applications using Self-Service.

NEW QUESTION # 57
Refer to the exhibit.

Data Flow

A subset of Linux VMs are required to be gracefully shutdown each evening. A Playbook is created to shutdown the targeted VMs, however the error message shown in the exhibit is displayed when the Playbook is executed.

What is causing the error message?

- A. User executing the Playbook does not have Admin privileges.
- B. The SSH Service is not running on the VMs.
- C. The VM is already powered off.
- D. The VM is missing Nutanix Guest Tools.

Answer: B

Explanation:
According to the Nutanix Multicloud Automation Administration (NMCAA) course1, one of the prerequisites for using X-Play to automate tasks on VMs is to have SSH enabled and configured on the target VMs. This allows X-Play to connect to the VMs and execute commands or scripts remotely. If the SSH service is not running on the VMs, then X-Play will fail to connect and perform the actions, resulting in the error message shown in the exhibit. The other options are not likely to cause this error, as they are either unrelated to X-Play (A and B) or not required for X-Play to work.
