Reliable 312-50v13 Study Materials, 312-50v13 Interactive Course

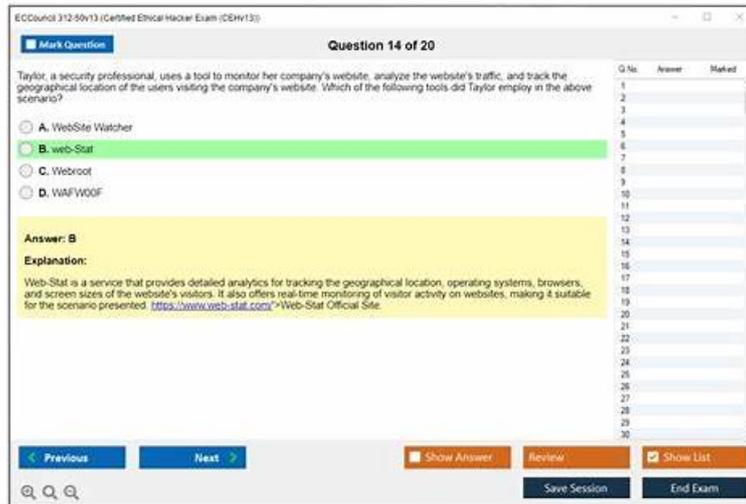

DOWNLOAD the newest Actual4dump 312-50v13 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=17kNLU29MYZndHehJj-ycQ40MtoUtJ2Sy

No matter how much you study, it can be difficult to feel confident going into the Certified Ethical Hacker Exam (CEHv13) (312-50v13) exam. However, there are a few things you can do to help ease your anxiety and boost your chances of success. First, make sure you prepare with Real 312-50v13 Exam Dumps. If there are any concepts you're unsure of, take the time to take 312-50v13 practice exams until you feel comfortable.

The Certified Ethical Hacker Exam (CEHv13) 312-50v13 exam is a valuable credential that will assist you to advance your career. To pass the 312-50v13 exam is not an easy job. It always gives tough times to their candidates. The best 312-50v13 Exam Preparation strategy along with the Actual4dump 312-50v13 exam practice test questions can help you to crack the ECCouncil 312-50v13 exam easily.

312-50v13 Interactive Course, Reliable 312-50v13 Exam Test

You can see the recruitment on the Internet, and the requirements for 312-50v13 certification are getting higher and higher. As the old saying goes, skills will never be burden. So for us, with one more certification, we will have one more bargaining chip in the future. However, it is difficult for many people to get a 312-50v13 Certification, but we are here to offer you help. We have helped tens of thousands of our customers achieve their certification with our excellent 312-50v13 exam braindumps.

ECCouncil Certified Ethical Hacker Exam (CEHv13) Sample Questions (Q368-Q373):

NEW QUESTION # 368
Which of the following tools can be used for passive OS fingerprinting?

- A. tracert
- B. ping
- C. tcpdump
- D. nmap

Answer: C

Explanation:
Passive OS fingerprinting involves observing traffic from a remote host and analyzing it to infer details about the operating system

without actively sending packets or probes. This is useful in stealthy reconnaissance where avoiding detection is critical.

tcpdump is a packet analyzer that captures traffic in real time. By analyzing certain TCP/IP header fields such as TTL (Time-To-Live), window size, TCP options, and DF (Don't Fragment) flags, attackers can passively deduce the operating system of the target host.

CEH v13 Guide states:

"Passive fingerprinting tools like tcpdump and Wireshark allow the attacker to capture packets and analyze them for OS-specific traits, making it possible to identify the OS without sending packets to the target system." Reference - CEH v13 Study Guide: Module 02: Footprinting and Reconnaissance, Section: "OS Fingerprinting Techniques", Subsection: "Passive OS Fingerprinting"

Incorrect Options Explained:

* A: nmap is primarily an active scanning tool (though it has limited passive capabilities).

* C: tracert is used for tracing packet routes, not OS fingerprinting.

* D: ping checks host availability and latency, not OS details.

###############

NEW QUESTION # 369

An Intrusion Detection System (IDS) has alerted the network administrator to a possibly malicious sequence of packets sent to a Web server in the network's external DMZ. The packet traffic was captured by the IDS and saved to a PCAP file. What type of network tool can be used to determine if these packets are genuinely malicious or simply a false positive?

- A. Network sniffer
- B. Protocol analyzer
- C. Vulnerability scanner
- D. Intrusion Prevention System (IPS)

Answer: B

NEW QUESTION # 370

What is the purpose of a demilitarized zone on a network?

- A. To scan all traffic coming through the DMZ to the internal network
- B. To contain the network devices you wish to protect
- C. To only provide direct access to the nodes within the DMZ and protect the network behind it
- D. To provide a place to put the honeypot

Answer: C

Explanation:

A demilitarized zone (DMZ) is a buffer zone between a trusted internal network and an untrusted external network (usually the internet). Public-facing services like web servers, email servers, and DNS servers are typically placed in the DMZ. These nodes can be accessed from the internet, but the DMZ design ensures that unauthorized access to the internal network is blocked or highly restricted.

The purpose is to provide access to certain systems without exposing the internal network directly.

NEW QUESTION # 371

Techno Security Inc. recently hired John as a penetration tester. He was tasked with identifying open ports in the target network and determining whether the ports are online and any firewall rule sets are encountered.

John decided to perform a TCP SYN ping scan on the target network. Which of the following Nmap commands must John use to perform the TCP SYN ping scan?

- A. nmap -sn -PO <target IP address>
- B. nmap -sn -PS <target IP address>
- C. nmap -sn -PA <target IP address>
- D. nmap -sn -pp <target IP address>

Answer: B

Explanation:
In CEH v13 Module 03: Scanning Networks, under the Nmap Host Discovery Techniques, TCP SYN ping scan is explained as one of the methods used to determine whether a host is online by sending SYN packets to specified TCP ports.
When using Nmap:
-PS specifies a TCP SYN ping scan. It sends SYN packets to a given port (by default port 80, unless specified) to check whether a host is up and whether the port is open.
The response type to this SYN packet determines the host status:
If a SYN/ACK is received, it indicates the port is open, and the host is up.
If RST is received, the port is closed, but the host is still considered online.
If no response or ICMP unreachable is received, the host may be down or filtered.
Clarification of options:
A). -pp: This is not a valid Nmap option.
B). -PO: This sends IP Protocol Ping, used less frequently and not the same as SYN ping.
C). -PS: Correct. Performs a TCP SYN Ping Scan.
D). -PA: Sends TCP ACK Ping, used to determine firewall presence but not the same as SYN scan.
Reference from CEH v13 Study Guide and Course Material:
CEH v13 Official Module 03 - Scanning Networks, Slide: Nmap Host Discovery Techniques EC-Council iLabs - Scanning Networks Practical Lab Guide: Section on nmap -sn -PS Nmap Official Documentation (also referenced in CEH): https://nmap.org/book/man-host-discovery.html

NEW QUESTION # 372
Which wireless security protocol replaces the personal pre-shared key (PSK) authentication with Simultaneous Authentication of Equals (SAE) and is therefore resistant to offline dictionary attacks?

- A. WPA2-Enterprise
- B. Bluetooth
- C. ZigBee
- D. WPA3-Personal

Answer: C

NEW QUESTION # 373
......

As we all know, famous companies use certificates as an important criterion for evaluating a person when recruiting. The number of certificates you have means the level of your ability. 312-50v13 practice materials are an effective tool to help you reflect your abilities. With our study materials, you do not need to have a high IQ, you do not need to spend a lot of time to learn, you only need to follow the method 312-50v13 Real Questions provide to you, and then you can easily pass the exam. Our study material is like a tutor helping you learn, but unlike a tutor who make you spend too much money and time on learning.
