So if you want to save money, please choose PayPal. Here choosing PayPal doesn't need to have a PayPal. In fact here you should have credit card. If you click PayPal payment, it will automatically transfer to credit card payment for 1Z1-947 Exam Test engine. On the other hands, PayPal have strict restriction for sellers account to keep buyers' benefits, so that you can share worry-free purchasing for 1Z1-947 exam test engine.

Oracle GoldenGate 19c Implementation Professional Sample Questions (Q113-Q118):

NEW QUESTION # 113

You want to use multiple concurrent Extract process groups. What is the key factor in determining how many can be running at the same time?

- A. The number of compound keys on the source tables
- **B. System memory**
- C. Disk space
- D. The number of concurrent users

Answer: B

Explanation:

System memory is the most critical factor for determining how many Extract processes can run concurrently. Each process consumes memory, and insufficient memory may lead to performance degradation or process failure.

NEW QUESTION # 114

Which utility is used to view the contents of trail files?

- A. ggconsole
- B. datapump
- C. logdump
- D. trailreader

Answer: C

Explanation:

logdump is the diagnostic tool to examine trail files at the record level.

NEW QUESTION # 115

You need to manually patch Oracle GoldenGate source and targets. How should you proceed?

- A. Stop access to the source and target databases. Allow Extract to finish capturing the transaction data that remains in the transaction log and stop Extract. Start applying the patch on the source. Wait until the data pump (if used) and Replicat are finished processing the data in their respective trails. Stop the data pump and Replicat. Apply the patch on the target. Start the Oracle GoldenGate processes whenever you are ready to begin capturing user activity again.
- B. Stop access to the source. Allow Extract to finish capturing the transaction data that remains in the transaction log and stop Extract. Start applying the patch on the source. Wait until the data pump/Replicat are finished processing the data in their respective trails. Stop the data pump/Replicat. Apply the patch on the target. If the patches changed table defs, run DEFGEN for the source tables to generate updated source defs, and then replace the old defs with the new ones in the existing source defs file on the target. Start GG processes when ready to begin capturing activity again.
- C. Stop access to the source database. Allow Extract to finish capturing the transaction data that remains in the transaction log and stop Extract. Start applying the patch on the source and on the target. Start the Oracle GoldenGate processes whenever you are ready to begin capturing user activity again.
- D. Stop access to the source and target databases. Start applying the patch on the source. Stop the data pump and Replicat. Apply the patch on the target. Start the Oracle GoldenGate processes whenever you are ready to begin capturing user activity again.

Answer: B

Explanation:

This is the only option that:

- * Waits for Extract to finish capturing remaining redo/transaction log data
- * Waits for Data Pump and Replicat to reach EOF
- * Properly stops components in sequence
- * Accounts for definition file updates (DEFGEN) if metadata changes

NEW QUESTION # 116

Oracle GoldenGate can be deployed quickly and easily. You need to prepare the environment, configure and start change capture to GoldenGate trail files, perform Initial Load to synchronize databases, and configure and start change delivery. You can perform the tasks for Initial Load before or after starting change capture. When do you not need to do an Initial Load at all?

- A. You already have the tables and data on the target needed for replicating data changes.
- B. You don't need to address Initial Load as it is just optional.
- C. You created the target database with Initial Load enabled.
- D. You need only to replicate to the new table on the target database with changes from the source table starting at a specific time.

Answer: A

Explanation:

An Initial Load is used to synchronize source and target databases before real-time replication begins.

NEW QUESTION # 117

What Oracle GoldenGate microservices component is used to allow administrators to create and manage one or multiple Oracle GoldenGate deployments on a local host?

- A. Distribution server
- B. Administration server
- C. Extract and Replicat server
- **D. Service Manager**

Answer: D

Explanation:

The Service Manager in Oracle GoldenGate Microservices Architecture acts as a watchdog for other services and allows administrators to create and manage deployments on the local host. It maintains inventory and configuration information about deployments, enabling the management of multiple local deployments.

NEW QUESTION # 118

.....

With the rapid development of computer, network, and semiconductor techniques, the market for people is becoming more and more hotly contested.
