

Test SPLK-3002 Vce Free | Valid Valid Braindumps SPLK-3002 Pdf: Splunk IT Service Intelligence Certified Admin

What's more, part of that Itexamguide SPLK-3002 dumps now are free: <https://drive.google.com/open?id=1psvhEHx1HVRo49EM1Is2ehwPzTwe-M1w>

There are many advantages of our SPLK-3002 exam briandump and it is worthy for you to buy it. You can download and try out our SPLK-3002 guide questions demo before the purchase and use them immediately after you pay for them successfully. Once you pay for it, we will send to you within 5-10 minutes. Then you can learn and practice it. We update the SPLK-3002 Torrent question frequently to make sure that you have the latest SPLK-3002 exam questions to pass the exam. You may enter in the big company and double their wages after you pass the SPLK-3002 exam.

Splunk is a software company that specializes in providing a platform for machine-generated data analysis. Their software is widely used in IT infrastructure monitoring, security, and compliance, among other areas. To ensure that IT professionals are equipped with the necessary skills to make the most of Splunk's software, the company offers a range of certification exams. One of the most important of these is the SPLK-3002 Exam, which certifies an individual as a Splunk IT Service Intelligence (ITSI) Certified Admin.

Valid Braindumps SPLK-3002 Pdf | Test SPLK-3002 Topics Pdf

Our product is revised and updated according to the change of the syllabus and the latest development situation in the theory and the practice. The SPLK-3002 exam torrent is compiled elaborately by the experienced professionals and of high quality. The contents of SPLK-3002 guide questions are easy to master and simplify the important information. It conveys more important information with less answers and questions, thus the learning is easy and efficient. The language is easy to be understood makes any learners have no obstacles. The SPLK-3002 Test Torrent is suitable for anybody no matter he or she is in-service staff or the student, the novice or the experience people who have worked for years. The software boosts varied self-learning and self-assessment functions to check the results of the learning.

Splunk SPLK-3002 exam is intended for professionals who have experience in deploying and managing IT infrastructure. Individuals who have worked with Splunk ITSI and have a thorough understanding of its capabilities will benefit from this certification. SPLK-3002 Exam Tests the individuals on their ability to configure and manage the Splunk ITSI environment, create and manage service models, and set up alerts and notifications.

Splunk IT Service Intelligence Certified Admin Sample Questions (Q25-Q30):

NEW QUESTION # 25

How do you automatically restrict a KPI to only the entities in its service, and generate KPI values for each entity?

- A. Select "Yes" for "Split by Entity" and "No" for "Filter to Entities in Service".
- B. Select "No" for "Split by Entity" and "Yes" for "Filter to Entities in Service".
- C. Select "No" for both "Split by Entity" and "Filter to Entities in Service".

- D. Select "Yes" for both "Split by Entity" and "Filter to Entities in Service".

Answer: D

Explanation:

Reference:

A is the correct answer because selecting "Yes" for both "Split by Entity" and "Filter to Entities in Service" allows you to automatically restrict a KPI to only the entities in its service and generate KPI values for each entity. Split by Entity splits the KPI search results by entity alias fields and calculates a separate KPI value for each entity. Filter to Entities in Service filters out any entities that are not part of the service from the KPI search results. This way, you can ensure that your KPI reflects only the relevant entities for your service and provides granular information for each entity. Reference: [Configure KPI settings in ITSI]

NEW QUESTION # 26

What are valid ITSI Glass Table editor capabilities? (Choose all that apply.)

- A. Service swapping configuration.
- B. Correlation search creation.
- C. Creating glass tables.
- D. Adding KPI metric lanes to glass tables.

Answer: A,C,D

Explanation:

Create a glass table to visualize and monitor the interrelationships and dependencies across your IT and business services.

The service swapping settings are saved and apply the next time you open the glass table.

You can add metrics like KPIs, ad hoc searches, and service health scores that update in real time against a background that you design. Glass tables show real-time data generated by KPIs and services.

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/SI/GTOverview> The glass table editor is a tool that allows you to create and edit glass tables in ITSI. Some of the capabilities of the glass table editor are:

Creating glass tables from scratch or from existing templates.

Configuring service swapping on widgets to toggle displaying metrics from different services.

Adding KPI metric lanes to glass tables to show historical trends of KPI values.

The glass table editor does not support correlation search creation, which is a separate feature in ITSI that allows you to create searches that look for relationships between data points and generate notable events.

References: Overview of the glass table editor in ITSI, [Configure service swapping on glass tables], [Add KPI metric lanes to glass tables], [Overview of correlation searches in ITSI]

NEW QUESTION # 27

Which of the following describes entities? (Choose all that apply.)

- A. To automatically restrict the KPI to only the entities in a particular service, select "Filter to Entities in Service".
- B. An abstract (pseudo/logical) entity can be used to split by for a KPI, although no entity rules or filtering can be used to limit data to a specific service.
- C. Multiple entities can share the same alias value, but must have different role values.
- D. Entities must be IT devices, such as routers and switches, and must be identified by either IP value, host name, or mac address.

Answer: A,B

Explanation:

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/SI/KPIfilter> Entities are IT components that require management to deliver an IT service. Each entity has specific attributes and relationships to other IT processes that uniquely identify it. Entities contain alias fields and informational fields that ITSI associates with indexed events. Some statements that describe entities are:

B). An abstract (pseudo/logical) entity can be used to split by for a KPI, although no entity rules or filtering can be used to limit data to a specific service. An abstract entity is an entity that does not represent a physical host or device, but rather a logical grouping of data sources. For example, you can create an abstract entity for each business unit in your organization and use it to split by for a KPI that measures revenue or customer satisfaction. However, you cannot use entity rules or filtering to limit data to a specific service based on abstract entities, because they do not have alias fields that match indexed events.

D). To automatically restrict the KPI to only the entities in a particular service, select "Filter to Entities in Service". This option allows

you to filter the data sources for a KPI by the entities that are assigned to the service. For example, if you have a service for web servers and you want to monitor the CPU load percent for each web server entity, you can select this option to ensure that only the events from those entities are used for the KPI calculation.

NEW QUESTION # 28

When creating a custom deep dive, what color are services/KPIs in maintenance mode within the topology view?

- A. Gear Icon
- B. Purple
- C. Blue
- D. Gray

Answer: D

Explanation:

When creating a custom deep dive, services or KPIs that are in maintenance mode are shown in gray color in the topology view. This indicates that they are not actively monitored and do not generate alerts or notable events. References: Deep Dives

NEW QUESTION # 29

There are two Smart Mode configuration settings that control how fields affect grouping. Which of these is correct?

- A. Text deviation and category similarity.
- B. Text similarity and category deviation.
- C. Text deviation and category deviation.
- D. Text similarity and category similarity.

Answer: D

Explanation:

In the context of Smart Mode configuration within Splunk IT Service Intelligence (ITSI), the two settings that control how fields affect grouping are "Text similarity" and "Category similarity." Smart Mode is a feature used in event grouping that leverages machine learning to automatically group related events. "Text similarity" refers to how closely the textual content of event fields must match for those events to be grouped together, taking into account commonalities in strings or narratives within the event data. "Category similarity," on the other hand, relates to the similarity in the categorical attributes of events, such as event types or source types, which helps in clustering events that are similar in nature or origin. Both of these settings are crucial in determining how events are grouped in ITSI, influencing the granularity and relevance of the event groupings based on textual and categorical similarities.
