Answer: C

Explanation:

In the output we noticed that the "Destination unreachable; gateway or host down" notification while trying to communicate with the TACACS+ server. This means the TACACS+ server went down. So the next authentication method is via the local database ("Method=LOCAL"). But the authentication was failed again because of bad username, bad password or both.

NEW QUESTION # 28

What are two functions of MPLS Layer 3 VPNs? (Choose two.)

- **A. BGP is used for signaling customer VPNv4 routes between PE nodes.**
- B. A packet with node segment ID is forwarded along with shortest path to destination.
- **C. Customer traffic is encapsulated in a VPN label when it is forwarded in MPLS network.**
- D. LDP and BGP can be used for Pseudowire signaling.
- E. It is used for transparent point-to-multipoint connectivity between Ethernet links/sites.

Answer: A,C

Explanation:

MPLS Layer-3 VPNs provide IP connectivity among CE sites

MPLS VPNs enable full-mesh, hub-and-spoke, and hybrid IP connectivity

CE sites connect to the MPLS network via IP peering across PE-CE links

MPLS Layer-3 VPNs are implemented via VRFs on PE edge nodes

VRFs providing customer routing and forwarding segmentation

BGP used for signaling customer VPN (VPNv4) routes between PE nodes

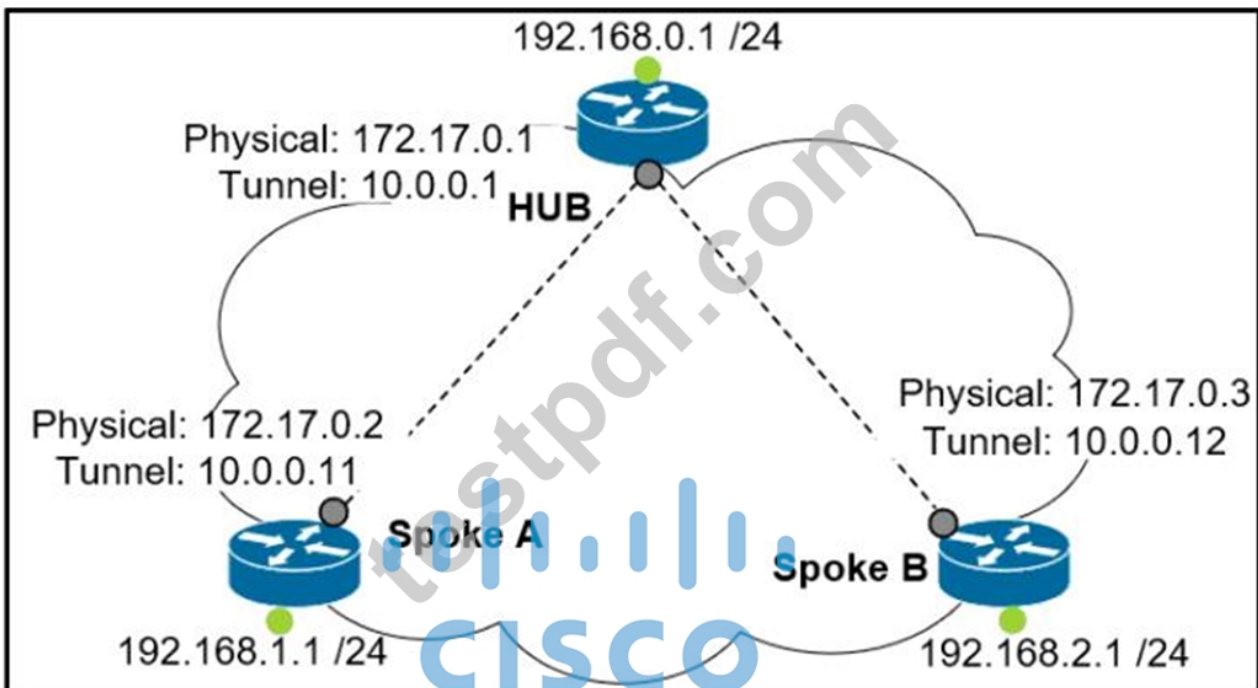

To ensure traffic separation, customer traffic is encapsulated in an additional VPN label when forwarded in MPLS network

Key applications are layer-3 business VPN services, enterprise network segmentation, and segmented layer-3 Data Center access
