## Cisco Securing Networks with Cisco Firepower Sample Questions (Q305-Q310):

### NEW QUESTION # 305

An engineer must configure an inline set on a Cisco Secure IPS by using the Cisco Secure Firewall Management Center. The inline set must make a copy of each packet before analyzing the packet and block any connections that do not complete the three-way handshake. These configurations have been performed already:

- Select and enable the interfaces that will be added to the inline set.
- Configure the speed and duplex.
- Configure the inline set and add the interfaces to the inline set.

Which action completes the task?

- A. Configure Snort Fail Open.
- B. Configure Link State Propagation.
- **C. Implement Strict TCP Enforcement.**
- D. Set Tap Mode to Inline.

**Answer: C**

Explanation:

The scenario describes a need for blocking any connections that do not complete the three-way handshake. This behavior is associated with TCP session validation - ensuring that only legitimate sessions (with completed handshakes) are allowed.

Implement Strict TCP Enforcement - This feature ensures that only fully established TCP sessions (with a proper 3-way handshake) are allowed, and sessions that fail to complete the handshake are blocked.

#### NEW QUESTION # 306

An engineer is setting up a new Firepower deployment and is looking at the default FMC policies to start the implementation.
