EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q56-Q61):

NEW QUESTION # 56

Question:

What is a key challenge in managing the variety aspects of Big Data?

- A. Storing transaction-based data over the years
- B. Generating real-time data
- **C. Combining data from various sources and formats cost-effectively**
- D. Reducing data volume to manageable sizes

Answer: C

Explanation:

Big Data's "variety" refers to the challenge of integrating different data types (structured, semi-structured, unstructured) from various sources.

The key challenge is to combine and manage this data cost-effectively, ensuring analytics systems can process it seamlessly.

* Generating real-time data is about velocity, not variety.

* Storing data over years is about volume.

* Reducing volume is more about data management, not variety.

NEW QUESTION # 57

Question:

An Ethernet switch has eight ports, and all ports must be operational for 24 hours from Monday through Friday. However, failures of Port 6 occur within the week as follows:

* Tuesday: 6 AM to 8 AM

* Thursday: 5 PM to 10 PM

* Friday: 7 AM to 9 AM What is the MTBF (Mean Time Between Failures) of Port 6?

- A. 37 hours
- B. 30 hours
- C. 32 hours
- D. 40 hours

Answer: D

Explanation:

To calculate the MTBF, we need to determine the total operational time and the number of failures.

* Total operational time (Monday to Friday): $5 \text{ days} \times 24 \text{ hours} = 120 \text{ hours}$

* Number of failures: 3 (Tuesday, Thursday, Friday)

MTBF = Total operational time / Number of failures

MTBF = 120 hours / 3 = 40 hours

NEW QUESTION # 58

Question:

A company wants to implement a security strategy that uses firewall, VPN, malware protection, and encryption. Which approach is most suitable for achieving this goal?

- A. Defense-in-depth
- B. Perimeter security
- C. Zero trust security
- D. DMZ

Answer: A

Explanation:

Defense-in-depth is a security strategy that layers multiple security controls throughout the IT environment to protect data and infrastructure.

* Firewalls (network layer)

* VPN (secure remote access)

* Malware protection (endpoint and gateway)

* Encryption (data in transit and at rest)

This approach reduces reliance on a single security measure and strengthens overall protection.

* Zero trust: Focuses on continuously validating trust.

* DMZ: Network architecture, not a full security approach.

* Perimeter security: Limited to the outer edge of the network.

NEW QUESTION # 59

Question:

What is the first step in a machine learning process?

- A. Analyzing the data
- B. Selecting the type of learning
- C. **Collecting the datasets**
- D. Training the model

Answer: C

Explanation:

Collecting the datasets is the first step in any machine learning (ML) process. Without data, the ML system cannot function. Steps include:

1##Collecting datasets:Gathering data relevant to the problem to train and validate the ML model.

2##Analyzing data:Cleaning and exploring data for patterns.

3##Selecting learning type:Deciding between supervised, unsupervised, or reinforcement learning.

4##Training the model:Using the data to build predictive models.

NEW QUESTION # 60

Question:

What is the main advantage of Network Attached Storage (NAS) systems over general-purpose servers?

- A. Increases data transfer speed
- B. **Centralizes and optimizes file sharing operations**
- C. Reduces the size of the object ID
- D. Supports FC protocols to access files over FC-SAN

Answer: B

Explanation:

NAS systems are purpose-built to handle file sharing and provide:

* Centralized file access for multiple clients.

* Optimized file sharing through dedicated hardware and software.

* Efficient management with file-level protocols (NFS, CIFS/SMB).

* FC protocols (Option B) are for block storage, not NAS.

* Object ID (Option C) relates to object storage, not NAS.

* Speed (Option D): While NAS can offer good speed, its main advantage is shared file access.
