Standing out among all competitors and taking the top spot is difficult but we made it by our NCP-MCI-7.5 preparation materials. They are honored for their outstanding quality and accuracy so they are prestigious products. Our NCP-MCI-7.5 exam questions beat other highly competitive companies on a global scale. They provide a high pass rate for our customers as 98% to 100% as a pass guarantee. And as long as you follow with the NCP-MCI-7.5 Study Guide with 20 to 30 hours, you will be ready to pass the exam.

To do this you just need to enroll in Nutanix NCP-MCI-7.5 exam and strive hard to pass the Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 (NCP-MCI-7.5) exam with good scores. However, you should keep in mind that the Nutanix NCP-MCI-7.5 certification exam is different from the traditional exam and always gives taught time to their candidates. But with proper Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 (NCP-MCI-7.5) exam preparation, planning, and firm commitment can enable you to pass the challenging Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 (NCP-MCI-7.5) exam.

>> NCP-MCI-7.5 Latest Examprep <<

Fantastic Nutanix NCP-MCI-7.5 Latest Examprep With Interarctive Test Engine & Accurate NCP-MCI-7.5 Verified Answers

It is evident to all that the NCP-MCI-7.5 test torrent from our company has a high quality all the time. A lot of people who have bought our products can agree that our NCP-MCI-7.5 test questions are very useful for them to get the certification. There have been 99 percent people used our NCP-MCI-7.5 exam prep that have passed their exam and get the certification, more importantly, there are signs that this number is increasing slightly. It means that our NCP-MCI-7.5 Test Questions are very useful for all people to achieve their dreams, and the high quality of our NCP-MCI-7.5 exam prep is one insurmountable problem.

Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 Sample Questions (Q102-Q107):

NEW QUESTION # 102

An administrator is tasked with deploying a new VM with Secure Boot enabled for a UEFI boot configuration. Which bus type should the administrator use to deploy the VirtIO ISO?

- A. IDE
- B. SCSI

- C. SATA
- D. SAS

Answer: C

Explanation:

Nutanix documentation for Windows VM creation on AHV clearly states that when deploying the Nutanix VirtIO ISO for a VM using Secure Boot and UEFI, the SATA bus type must be used. Nutanix also documents that IDE is not supported when Secure Boot is enabled for UEFI mode, which reinforces the correct bus choice. This makes C. SATA the correct answer directly from the official procedure. (Nutanix) This is a compatibility question, not a performance question. It can be tempting to choose SCSI because it is common in virtual machine storage design, but Nutanix's secure-boot provisioning guidance is explicit about the VirtIO ISO attachment method. The exam often checks whether the administrator remembers that the driver ISO itself has a required bus type in secure-boot scenarios. Since the supported method in the Nutanix documentation is to mount the VirtIO ISO on SATA, C is the correct answer. (Nutanix)

NEW QUESTION # 103

An administrator needs to protect a group of mission-critical virtual machines.

The business requirements are:

- * Recovery Point Objective (RPO) must be set to 5 minutes.
- * New mission critical VMs should be automatically protected.

Which data protection type supports this configuration?

- A. Protection Policy with NearSync replication
- B. Protection Policy with Asynchronous replication
- C. Protection Domain with NearSync replication
- D. Protection Domain with Asynchronous replication

Answer: A

Explanation:

A required RPO of 5 minutes immediately points to NearSync replication, because Nutanix documents NearSync protection policies as supporting recovery points in 1-15 minute intervals. The second requirement-automatically protect new mission-critical VMs-points to a Protection Policy approach in Prism Central, because protection policies can use categories and policy-based assignment to scale protection dynamically as new matching VMs are added. Combining those two requirements makes Protection Policy with NearSync replication the correct answer. (Nutanix) Protection Domains can support NearSync in older or alternate workflows, but the phrase "new mission critical VMs should be automatically protected" is the clue that pushes this question toward policy-based protection rather than manually maintained membership. Asynchronous replication also fails the first requirement because its RPO target is not the 5-minute class represented by NearSync. Nutanix's modern DR design encourages policy-driven protection for scalable, category-based administration. Therefore B is the best fit for both the RPO and automatic-inclusion requirements. (Nutanix)

NEW QUESTION # 104

What is the RPO time, in hours, for Prism Central backups?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:

Nutanix documentation for Prism Central point-in-time backups states that the Recovery Point Objective (RPO) can be configured in values ranging from 1 hour to 24 hours. Since the question asks for the RPO time in hours for Prism Central backups, the expected exam answer is the maximum supported interval of 24 hours, which corresponds to option A.

This is not asking how long recovery takes or how long restore points are retained. Nutanix documents those separately. The RPO defines how often recovery points can be taken, and Prism Central's backup framework allows choices up to a 24-hour interval. That is why values like 36, 48, or 72 hours are not supported answers in the documented PC backup workflow. So for an authentic Nutanix-aligned study sheet, A. 24 is correct.

NEW QUESTION # 105

An administrator has configured CVM security hardening on a Nutanix cluster with the following settings:

* IP Restriction State is set to enabled

* Password-based SSH access is disabled via Cluster Lockdown

The administrator attempts to SSH into the CVM from a new jump box and the connection is refused.

What should the administrator do to restore SSH access to the CVM?

- A. Access the CVM using the local console or serial access and update the SSH whitelisted address to the new jump box IP.
- B. Restart the CVM to reset the IP restriction and regain SSH access from the new jump box IP.
- C. Log in to Prism Central Security Dashboard and remotely update the SSH whitelisted addresses for the affected cluster.
- D. Log in to Prism Element and update the Cluster Lockdown settings to add the new jump box IP address.

Answer: A

Explanation:

Nutanix security hardening guidance explains that SSH Whitelisted Addresses control which client IPs are allowed to reach the CVM over SSH. If IP restriction is enabled and the new jump box is not on the allowlist, the SSH connection is expected to be refused. In that locked-down state, the correct recovery path is to access the CVM through a local or serial console and update the whitelist to include the new jump box IP. That makes C the correct answer. (portal.nutanix.com , portal.nutanix.com) Cluster Lockdown disabling password-based SSH is not the same setting as the SSH allowlist. Prism Central security views can help with visibility, but the key documented mechanism is the whitelist itself. Restarting the CVM does not reset the hardened configuration. Nutanix's intent is that trusted-source access must be explicitly permitted, and once it is blocked, you need console-level access to make the change safely.

NEW QUESTION # 106

An administrator needs to protect a set of workloads across three sites (Site A, Site B, Site C) managed by different Prism Central instances. Which is the most efficient way to protect such VMs?

- A. Create two protection policies, one from site A to B and one from site A to C.
- B. Create a single protection policy for all three sites from the source cluster.
- C. Create three different protection policies, one per Prism Central.
- D. Create a single protection policy from Site A and clone it to Site B and Site C.

Answer: B

Explanation:

Nutanix documentation for multisite disaster recovery states that a protection policy can include multiple replication schedules across up to three different recovery clusters, and Nutanix also documents the ability to configure multisite replication schedules for up to three recovery clusters with different schedules. That means a source site can protect workloads to multiple destinations without requiring separate, duplicated protection policies for each site. Given the options, the most efficient approach is therefore one protection policy from the source cluster covering all three sites, which is option D.

The answer choices that create multiple separate protection policies are less efficient and introduce avoidable administrative duplication. Cloning policies across sites also misses the point of Nutanix's native multisite capability. Even though the sites are managed by different Prism Central instances, Nutanix documents DR support between clusters registered to different Prism Central instances as well. So the most scalable and documentation-aligned answer is D.

NEW QUESTION # 107

.....

Our NCP-MCI-7.5 study materials are excellent examination review products composed by senior industry experts that focuses on researching the mock examination products which simulate the real NCP-MCI-7.5 test environment. Experts fully considered the differences in learning methods and examination models between different majors and eventually formed a complete review system. It will help you to Pass NCP-MCI-7.5 Exam successfully after a series of exercises, correction of errors, and self-improvement.
