## Quiz 2026 Identity-and-Access-Management-Architect: Latest Salesforce Certified Identity and Access Management Architect New Dumps Files

The "VCE4Dumps" is committed to making the entire Salesforce Identity-and-Access-Management-Architect exam preparation

process instant and successful. To achieve these objectives the "VCE4Dumps" is offering real, valid, and updated Salesforce Certified Identity and Access Management Architect (Identity-and-Access-Management-Architect) exam practice test questions in three high in demand formats. These formats are Salesforce Identity-and-Access-Management-Architect PDF dumps files, desktop practice test software, and web-based practice test software. All these Identity-and-Access-Management-Architect Exam Questions formats contain the real Salesforce Certified Identity and Access Management Architect (Identity-and-Access-Management-Architect) exam practice test questions that assist you in preparation and you will feel confident to pass the final Salesforce Identity-and-Access-Management-Architect exam easily.

Salesforce is a company that provides Customer Relationship Management (CRM) solutions to businesses of all sizes. One of the key features of Salesforce is its Identity and Access Management (IAM) system, which allows businesses to control who has access to their data and applications. To ensure that their IAM system is properly implemented, Salesforce has developed the Identity and Access Management Architect certification. Salesforce Certified Identity and Access Management Architect certification is designed for experienced architects who are responsible for designing and implementing IAM solutions that meet the needs of their organizations.

Salesforce Identity-and-Access-Management-Architect (Salesforce Certified Identity and Access Management Architect) Certification Exam is designed for professionals who specialize in identity and access management in the Salesforce ecosystem. Salesforce Certified Identity and Access Management Architect certification demonstrates a thorough understanding of the Salesforce platform's security features, including user authentication, authorization, and data protection.

## Salesforce Certified Identity and Access Management Architect Sample Questions (Q103-Q108):

### NEW QUESTION # 103

The security team at Universal Containers (UC) has identified exporting reports as a high-risk action and would like to require users to be logged into Salesforce with their Active Directory (AD) credentials when doing so. For all other users of Salesforce, users should be allowed to use AD Credentials or Salesforce credentials. What solution should be recommended to prevent exporting reports except when logged in using AD credentials while maintaining the ability to view reports when logged in with Salesforce credentials?

- A. Use SAML Federated Authentication and block access to reports when accessed through a Standard Assurance session.
- B. Use SAML Federated Authentication and Custom SAML JIT Provisioning to dynamically add or remove a permission set that grants the Export Reports Permission.
- C. Use SAML federated Authentication with a Login Flow to dynamically add or remove a Permission Set that grants the Export Reports Permission.
- **D. Use SAML federated Authentication, treat SAML Sessions as High Assurance, and raise the session level required for exporting reports.**

**Answer: D**

Explanation:

The best solution to prevent exporting reports except when logged in using AD credentials while maintaining the ability to view reports when logged in with Salesforce credentials is to use SAML federated authentication, treat SAML sessions as high assurance, and raise the session level required for exporting reports. SAML federated authentication is a process that allows users to log in to Salesforce with an external identity provider (IdP), such as AD, that authenticates the user and issues a security token to Salesforce. By treating SAML sessions as high assurance, Salesforce assigns a higher level of trust and security to the sessions that are established by SAML federated authentication. By raising the session level required for exporting reports, Salesforce requires users to have a high assurance session before they can export reports.

This solution ensures that only users who log in with AD credentials can export reports, while users who log in with Salesforce credentials can still view reports but not export them.

The other options are not valid solutions for this scenario. Using SAML federated authentication and blocking access to reports when accessed through a standard assurance session would prevent users who log in with Salesforce credentials from viewing reports at all, which is not the desired outcome. Using SAML federated authentication and custom SAML JIT provisioning to dynamically add or remove a permission set that grants the export reports permission would require UC to write custom code and logic to implement the JIT provisioning and manage the permission set, which could increase complexity and cost. Using SAML federated authentication with a login flow to dynamically add or remove a permission set that grants the export reports permission would also require UC to write custom code and logic to implement the login flow and manage the permission set, which could introduce errors and performance issues. #### NEW QUESTION # 104

Universal Containers (UC) built a customer Community for customers to buy products, review orders, and manage their accounts. UC has provided three different options for customers to log in to the customer Community: Salesforce, Google, and Facebook. Which two role combinations are represented by the systems in the scenario? Choose 2 answers

- A. Facebook is the service provider and Salesforce is the identity provider
- B. Google is the service provider and Facebook is the identity provider
- C. Salesforce is the service provider and Google is the identity provider
- D. Salesforce is the service provider and Facebook is the identity provider

**Answer: C,D**

Explanation:

Explanation

The two role combinations that are represented by the systems in the scenario are Salesforce as the service provider and Google as the identity provider, and Salesforce as the service provider and Facebook as the identity provider. This means that Salesforce hosts the customer community app and relies on Google or Facebook to authenticate the users who log in with those options. Therefore, option B and D are the correct answers.

References: Salesforce as Service Provider and Identity Provider for SSO

#### NEW QUESTION # 105

Universal Containers (UC) employees have Salesforce access from restricted IP ranges only, to protect against unauthorized access. UC wants to rollout the Salesforce mobile app and make it accessible from any location. Which two options should an architect recommend? Choose 2 answers

- A. Use login flow to bypass IP range restriction for the mobile app.
- B. Relax the IP restriction in the Connect app settings for the Salesforce mobile app
- C. Relax the IP restriction with a second factor in the Connect app settings for Salesforce mobile app
- D. Remove existing restrictions on IP ranges for all types of user access.

**Answer: A,B**

#### NEW QUESTION # 106

Universal Containers (UC) is building a custom Innovation platform on their Salesforce instance. The Innovation platform will be written completely in Apex and Visualforce and will use custom objects to store the data. UC would like all users to be able to access the system without having to log in with Salesforce credentials. UC will utilize a third-party IDP using SAML SSO. What is the optimal Salesforce license type for all of the UC employees?

- A. External Identity License.
- B. Salesforce License.
- C. Identity License.
- D. Salesforce Platform License.

**Answer: D**

#### NEW QUESTION # 107

Universal Containers (UC) is considering a Customer 360 initiative to gain a single source of the truth for its customer data across disparate systems and services. UC wants to understand the primary benefits of Customer 360 Identity and how it contributes to a successful Customer 360 Truth project.

What are two key benefits of Customer 360 Identity as it relates to Customer 360?

Choose 2 answers

- A. Customer 360 Identity not only provides a unified sign up and sign in experience, but also tracks anonymous user activity prior to signing up so organizations can understand user activity before and after the users identify themselves.
- B. Customer 360 Identity enables an organization to build a single login for each of its customers, giving the organization an understanding of the user's login activity across all its digital properties and applications.
- C. Customer 360 Identity automatically integrates with Customer 360 Data Manager and Customer 360 Audiences to seamlessly populate all user data.

- D. Customer 360 Identity supports multiple brands so you can deliver centralized identity services and correlation of user activity, even if it spans multiple corporate brands and user experiences.

**Answer: B,D**

Explanation:

Customer 360 Identity is a cloud-based identity service that provides a single, trusted identity for customers across all your digital properties and applications<sup>2</sup>. Customer 360 Identity has several benefits that relate to Customer 360, such as<sup>3</sup>:

- \* Customer 360 Identity enables an organization to build a single login for each of its customers, giving the organization an understanding of the user's login activity across all its digital properties and applications. This helps to create a unified customer profile and deliver personalized experiences based on user preferences and behaviors<sup>3</sup>.
- \* Customer 360 Identity supports multiple brands so you can deliver centralized identity services and correlation of user activity, even if it spans multiple corporate brands and user experiences. This helps to maintain brand consistency and loyalty while providing seamless access to your products and services<sup>3</sup>.
