

100% Pass Quiz 2026 Salesforce Efficient Analytics-Arch-201 Latest Dumps Ebook

What's more, part of that TestPDF Analytics-Arch-201 dumps now are free: <https://drive.google.com/open?id=1hrilNrkuTC5Q4q5KsOeofixhoFqOOOrRf>

Worrying over the issue of passing exam has put many exam candidates under great stress. Many people feel on the rebound when they aimlessly try to find the perfect practice material. Our team will relieve you of tremendous pressure with passing rate of the Salesforce Certified Tableau Architect prepare torrents up to 98 percent to 100 percent. Even we have engaged in this area over ten years, professional experts never blunder in their handling of the Analytics-Arch-201 Exam torrents. By compiling our Salesforce Certified Tableau Architect prepare torrents with meticulous attitude, the accuracy and proficiency of them is nearly perfect. As the leading elites in this area, our Salesforce Certified Tableau Architect prepare torrents are in concord with syllabus of the exam. They are professional backup to this fraught exam.

Salesforce Analytics-Arch-201 Exam Syllabus Topics:

| Topic | Details |
|---------|---|
| Topic 1 | <ul style="list-style-type: none">• Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging. |

| | |
|---------|---|
| Topic 2 | <ul style="list-style-type: none"> • Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery. |
| Topic 3 | <ul style="list-style-type: none"> • Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions. |

New Analytics-Arch-201 Test Pass4sure | New Analytics-Arch-201 Exam Online

The TestPDF is committed to making the Salesforce Certified Tableau Architect Analytics-Arch-201 exam questions the first preference of Analytics-Arch-201 exam candidates. To achieve this objective the TestPDF offers the real and updated Analytics-Arch-201 dumps in three easy-to-use and compatible formats. These formats are Salesforce Certified Tableau Architect Analytics-Arch-201 PDF dumps files, desktop practice test software, and web-based practice test software. All these three Analytics-Arch-201 Practice Questions type are easy to install and smoothly work with all devices, operating systems, and browsers. So you rest assured that with all Analytics-Arch-201 exam practice test questions you will get everything that you need to learn, prepare and pass the valuable Analytics-Arch-201 certification with good scores.

Salesforce Certified Tableau Architect Sample Questions (Q202-Q207):

NEW QUESTION # 202

When implementing SSL encryption in Tableau Server, what is a critical step to ensure secure communication between the server and clients?

- A. Configuring Tableau Server to use a specific set of encryption algorithms
- B. Setting up a dedicated SSL decryption server to handle incoming SSL traffic
- **C. Obtaining and installing a valid SSL certificate from a trusted certificate authority on Tableau Server**
- D. Enabling SSL on client devices that access Tableau Server

Answer: C

Explanation:

Obtaining and installing a valid SSL certificate from a trusted certificate authority on Tableau Server Obtaining and installing a valid SSL certificate from a trusted certificate authority is a crucial step in implementing SSL encryption in Tableau Server. This certificate is used to establish a secure communication channel between the server and clients, ensuring that data transmitted is encrypted and protected from interception or tampering. Option A is incorrect because while configuring encryption algorithms is part of SSL configuration, obtaining and installing a valid SSL certificate is the primary and most critical step. Option C is incorrect as setting up a dedicated SSL decryption server is not a standard practice for SSL implementation in Tableau Server. Option D is incorrect because enabling SSL on client devices, while important for overall security, is not directly related to the implementation of SSL on Tableau Server.

NEW QUESTION # 203

In developing a custom view to monitor the performance of published data sources in Tableau Server, which part of the Tableau

repository schema should be primarily analyzed?

- A. The 'users' table to identify active users interacting with the data sources
- **B. The 'data_connections' table to gain insights into connections and performance of published data sources**
- C. The 'server_usage' table to understand the overall server load and its impact on data source performance
- D. The 'background_tasks' table to monitor the performance of scheduled tasks related to data sources

Answer: B

Explanation:

The 'data_connections' table to gain insights into connections and performance of published data sources The 'data_connections' table in the Tableau repository schema is critical for tracking the performance of published data sources. It provides detailed information on each connection made to the data sources, offering insights into how these data sources are being accessed and utilized, which is crucial for understanding and optimizing their performance. Option A is incorrect because the 'users' table, while identifying users, does not provide specific information on data source performance. Option C is incorrect as the 'background_tasks' table focuses on scheduled tasks and does not offer detailed insights into real-time data source performance. Option D is incorrect because the 'server_usage' table provides a broad overview of server activity but does not offer the granular details required for monitoring specific data source performance.

NEW QUESTION # 204

During a blue-green deployment of Tableau Server, what is a critical step to ensure data consistency between the blue and green environments?

- A. Running performance tests in the green environment
- B. Implementing load balancing between the blue and green environments
- C. Increasing the storage capacity of the green environment
- **D. Synchronizing data and configurations between the two environments before the switch**

Answer: D

Explanation:

Synchronizing data and configurations between the two environments before the switch Synchronizing data and configurations between the blue and green environments is a critical step in a blue-green deployment. This ensures that when the switch is made from the blue to the green environment, the green environment is up-to-date with the latest data and settings, maintaining data consistency and preventing any loss of information or functionality. Option A is incorrect because while performance testing is important, it does not directly ensure data consistency between the two environments. Option C is incorrect as load balancing between the two environments is not typically part of a blue-green deployment strategy, which focuses on one environment being active at a time. Option D is incorrect because simply increasing storage capacity in the green environment does not directly contribute to data consistency for the deployment.

NEW QUESTION # 205

In configuring LDAP (Lightweight Directory Access Protocol) for authentication in Tableau Server, what is an essential step to ensure successful user authentication?

- A. Configuring Tableau Server to periodically synchronize with the LDAP server, regardless of user login attempts
- **B. Specifying the correct base distinguished name (DN) and search filters in the LDAP configuration on Tableau Server**
- C. Allocating additional CPU resources to Tableau Server to handle the encryption and decryption of LDAP traffic
- D. Setting up a secondary LDAP server as a fallback for the primary LDAP server

Answer: B

Explanation:

Specifying the correct base distinguished name (DN) and search filters in the LDAP configuration on Tableau Server When configuring LDAP for authentication in Tableau Server, it is critical to specify the correct base distinguished name (DN) and search filters. This ensures that Tableau Server can correctly query the LDAP directory for user information and authenticate users based on the organization's user structure and policies. Option A is incorrect because periodic synchronization, while beneficial for keeping user information updated, is not critical for the initial configuration of LDAP authentication. Option C is incorrect as allocating additional CPU resources specifically for LDAP traffic is generally not necessary. Option D is incorrect because setting up a secondary LDAP server is more related to high availability and redundancy rather than the initial configuration of LDAP

authentication.

NEW QUESTION # 206

When designing a test plan for load testing Tableau Server, what is an important factor to consider for ensuring the validity of the test results?

- A. Concentrating the tests on the server's newest features to evaluate their impact on performance
- B. Using only synthetic test data to maintain consistency and control over the testing variables
- C. Executing the tests only during the server's peak usage hours to assess performance under maximum stress
- D. Gradually increasing the load during testing to observe how the server responds to escalating demands

Answer: D

Explanation:

Gradually increasing the load during testing to observe how the server responds to escalating demands An important factor in designing a test plan for load testing Tableau Server is to gradually increase the load. This method allows for observing how the server's performance scales with increasing demands, providing valuable insights into its capacity and potential bottle-necks. It helps in understanding the server's resilience and its ability to handle growing user activities. Option A is incorrect because testing only during peak hours might not provide a complete picture of the server's performance under various load conditions. Option C is incorrect as relying solely on synthetic test data might not accurately simulate real-world user interactions and data complexities. Option D is incorrect because focusing only on the newest features may overlook how the server performs with its core and more frequently used functionalities.

NEW QUESTION # 207

.....

The TestPDF is one of the top-rated and trusted platforms that are committed to making the entire Salesforce Analytics-Arch-201 exam preparation journey fast and successful. To achieve this goal the "TestPDF" is offering valid, updated, and real Salesforce Analytics-Arch-201 Exam Questions. These TestPDF Analytics-Arch-201 exam questions are checked and verified by qualified subject matter experts.
