Appian Certified Analyst Sample Questions (Q31-Q36):

NEW QUESTION # 31
Users expressed that only managers should be able to see information related to a business object.
How should you translate this requirement into a user story?

- A. "Only some of the data are available for managers."
- B. "As a manager, I need to build security options for records."
- C. "As a manager, I need to be able to see a record type and navigate the details."
- D. "As a manager, I must be in the group to see the data."

Answer: C

Explanation:
The correct way to translate the requirement into a user story is to focus on the manager's ability to access and navigate the information related to the business object. This user story follows the standard format: "As a [role], I need to [action] so that

[benefit]." In this case, the story captures the manager's need to view and interact with specific data.
User Story Format:
Role: Manager
Action: Ability to see and navigate a record type
Benefit: Ensures managers have the necessary access to perform their job duties Why Not Other Options?:
B . Focuses on building security options rather than the manager's need to access data.
C . Is vague and does not follow the standard user story format.
D . Focuses on group membership but is less specific about the action the manager needs to perform.

Using the correct user story format ensures that the development team clearly understands the requirement and how it benefits the end user.

NEW QUESTION # 32
In Appian, what is the purpose of a process model?

- A. To manage user permissions within the application
- B. To define the look and feel of the user interface
- C. To automate business workflows by defining sequences of tasks
- D. To create a database schema

Answer: C

NEW QUESTION # 33
Consider the below use case:
A third-party system needs to push information to Appian in real-time.
The information is processed in Appian and a case ID is returned.
The third-party system displays the reference case ID on the confirmation screen.
Which integration approach is most suitable?

- A. Use FTP/SFTP
- B. Use message queues
- C. Use an integration object
- D. Use a web API-based integration

Answer: D

Explanation:
The most suitable integration approach for the given use case is web API-based integration (A). Web APIs allow real-time communication between the third-party system and Appian. The third-party system can send information to Appian through an HTTP request, which Appian processes, and then returns the case ID in the response. This real-time, synchronous interaction is ideal for scenarios where immediate feedback, like displaying a case ID on a confirmation screen, is required. Appian Documentation - Web APIs Note: The other options-FTP/SFTP (B), integration objects (C), and message queues (D)-are not as suitable for real-time, synchronous interactions. FTP/SFTP is typically used for batch processing, integration objects facilitate interactions within Appian, and message queues are better suited for asynchronous processing.

NEW QUESTION # 34
You are part of an Agile team, and your responsibilities and attributes include:
A keen understanding of the business, the customer, and the market
The ability to clearly express product backlog items
The ability to prioritize the backlog to optimize the value of what the team will deliver The ability to order the items in the product backlog to best achieve goals and missions.
What is your role name?

- A. Sponsor
- B. Scrum Master
- C. Product Owner

- D. Appian Analyst

Answer: C

Explanation:
The responsibilities and attributes described are aligned with the role of a Product Owner in an Agile team. The Product Owner is responsible for maximizing the value of the product resulting from the work of the development team. They have a deep understanding of the business, customer needs, and market trends, and they use this knowledge to manage and prioritize the product backlog.
Role of Product Owner:
Understanding the Business: The Product Owner must understand the business context to prioritize work that delivers the most value.
Expressing Product Backlog Items: The Product Owner is responsible for defining and clearly expressing the items in the product backlog.
Prioritizing and Ordering the Backlog: The Product Owner prioritizes and orders the backlog items to optimize the team's output and ensure alignment with business goals.
Why Not Other Options?:
A . Appian Analyst: While an Appian Analyst may have some similar responsibilities, the specific role of managing the product backlog and optimizing the value delivered by the team is the core responsibility of the Product Owner.
B . Scrum Master: The Scrum Master facilitates the Scrum process but does not manage the product backlog.
D . Sponsor: The Sponsor typically provides financial support and strategic direction but does not manage day-to-day product backlog activities.

The Product Owner role is crucial in ensuring that the development team is working on the most valuable features and that the product aligns with business and market needs.

NEW QUESTION # 35
You are trying to decide between using a side-by-side layout or a column layout.
Which resource should be referred to in order to make sure that best practices are followed?

- A. Appian SAIL Recipes
- B. Appian Tutorials
- C. Appian UX Design Guide
- D. Appian Discussion Board

Answer: C

Explanation:
The Appian UX Design Guide is the appropriate resource to consult when making decisions about layout choices like side-by-side versus column layouts. This guide provides best practices for designing user interfaces in Appian applications, ensuring that the UI is intuitive, responsive, and consistent with Appian's design principles. Referring to the UX Design Guide helps in making informed design decisions that enhance user experience.Appian UX Design Guide Note: While other resources like Appian Tutorials, Discussion Boards, and SAIL Recipes are useful for specific cases, the UX Design Guide is the primary reference for best practices in UI design.
