## C_TS470_2412 Latest Test Fee & C_TS470_2412 Test Cram

To meet the different and specific versions of consumers, and find the greatest solution to help you review, we made three versions for you. Three versions of SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service prepare torrents available on our test platform, including PDF version, PC version and APP online version. The trait of the software version is very practical. It can simulate real test environment, you can feel the atmosphere of the SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service exam in advance by the software version, and install the software version several times. PDF version of

C_TS470_2412 Exam torrents is convenient to read and remember, it also can be printed into papers so that you are able to write some notes or highlight the emphasis. PC version of our C_TS470_2412 test braindumps only supports windows users and it is also one of our popular types to choose.

## SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Sample Questions (Q59-Q64):

**NEW QUESTION # 59**
In which customizing activity do you define service contract determination for service orders?

- A. Define Item Categories
- B. Define Transaction Types
- C. Define Settings for Item Categories
- D. Define Settings for Transaction Types

**Answer: D**

Explanation:
Service contract determinationlinks a service order to an applicable contract for pricing or SLA. The correct answer isDefine Settings for Transaction Types (C), found in SPRO # Service # Transactions. Let's explore.
Why This Activity?
In "Define Settings for Transaction Types," you configure the service order type (e.g., "ZSER") to automatically determine a service contract. This includes settings like "Contract Determination" (e.g., by sold- to party, object) and the determination procedure. For example, a rule might check the equipment in the order against active contracts.
Why Not the Others?
* A & D:Item category settings focus on item-level behavior, not contract determination.
* B:Defines the transaction type structure, not its determination logic.
Example:
Service order type "ZSER" set to determine contract "C001" based on equipment "E001."
"Service contract determination for service orders is defined in the 'Define Settings for Transaction Types' activity."

**NEW QUESTION # 60**
Which feature is unique for solution quotations in SAP standard delivery?

- A. Using configurable products
- B. Using product proposals
- C. Determining service contracts
- D. Using product bundles

**Answer: D**

Explanation:
Comprehensive and Detailed In-Depth Explanation:
In SAP S/4HANA Cloud Private Edition, Service, thesolution quotationis a specializedtransaction type (e.g., SRVP in standard delivery) designed to offer customers a combination of products and services as a bundled solution. This capability is distinct from other quotation types, such as standard service quotations (e.g., scope item 4GA), and is part of the solution order management process introduced in SAP S/4HANA to support complex sales scenarios. Let's analyze each option to identify the unique feature in the standard delivery:
* Using product proposals (A): Product proposals are a feature in SAP S/4HANA Service that suggest items (e.g., spare parts or services) during order or quotation creation, based on predefined rules or bills of material (BOMs) with usage S (Service). While available in service quotations and orders, this feature is not unique to solution quotations; it's a broader functionality across service transactions and not specific to the solution quotation's purpose.
* Using configurable products (B): Configurable products, supported via Advanced Variant Configuration (scope item 6GS), allow customization of products with variants in service quotations and orders. This feature enhances flexibility in pricing and product specification but is not exclusive to solution quotations. It's available in standard service quotations and sales orders as well, making it a shared capability rather than a unique feature.
* Using product bundles (C): This is the defining feature of solution quotations in SAP S/4HANA standard delivery. Solution quotations enable the creation of quotations forproduct bundles, which are predefined combinations of different product types (e.g., tangible goods, services, and contract-relevant items) modeled in the master data. When a bundle is entered in a solution quotation, it automatically explodes into individual items, triggering follow-up transactions like sales orders, service orders, or service contracts

upon acceptance. This bundling capability, introduced in release 1809 and enhanced in subsequent releases (e.g., 1909), is unique to solution quotations and distinguishes them from other quotation types, which do not natively support this integrated bundle explosion and multi-transaction generation.
* Determining service contracts (D): Determining applicable service contracts (e.g., checking contract coverage for a technical object) is a feature in service processes, such as in-house repair (scope item
3XK) or service order management (scope item 3D2). While solution quotations can include contract- relevant items and create service contracts as follow-ups, this determination is not unique to them; it's a common functionality across service quotations and orders when linked to contract management (scope item 3MO).
The uniqueness ofproduct bundlesin solution quotations lies in their ability to streamline the sale of complex solutions by integrating diverse product types into a single quotation, with automated follow-up document creation (e.g., sales orders for goods, service orders for services, and contracts for subscriptions). This is explicitly supported in the standard delivery via Customizing (e.g., transaction type SRVP) and master data setup for bundles, as detailed in SAP's solution order management documentation.
Extract from SAP Documentation: "Solution quotations enable you to offer solutions to your customers by creating quotations for combinations of different types of products modeled as product bundles in your master data, a feature unique to this process in SAP S/4HANA." (SAP Community Blog,Solution Quotation in SAP S
/4HANA Service 1909OP, 2019).

**NEW QUESTION # 61**
What can you display in the app Find Technical Object? Note: There are 3 correct answers to this question.

- A. Installation information of the technical objects
- B. Service costs of the technical objects
- C. Planned and call dates for recurring service activities
- D. Measurement documents and measuring points of the technical objects
- E. System and user statuses of the technical objects

**Answer: A,D,E**

Explanation:
TheFind Technical Objectapp in SAP S/4HANA Cloud Private Edition, Service provides details about technical objects (e.g., equipment, functional locations). The correct answers areA, B, C. Let's explore.
App Functionality:
This Fiori app allows users to search and view technical object data.
* Installation information (A):Shows where the object is installed (e.g., functional location hierarchy).
* Measurement documents and measuring points (B):Displays recorded measurements (e.g., temperature) and their points.
* System and user statuses (C):Lists statuses (e.g., "INST" for installed, user status "In Repair").
Why Not the Others?
* D:Service costs are in financial apps (e.g., Service Actuals), not this app.
* E:Planned/call dates are in maintenance plan apps, not here.
Example:
Search equipment "E001" # See installation (FL-001), measuring point (Temp), status (INST).
"The Find Technical Object app displays installation information, measurement documents and points, and system/user statuses."

**NEW QUESTION # 62**
Which of the following can be assigned to a serial number profile?

- A. Equipment class
- B. Stock determination strategy
- C. Configuration profile
- D. Equipment category

**Answer: D**

Explanation:
Aserial number profilein SAP S/4HANA defines how serial numbers are managed for materials or equipment. The correct answer isequipment category (C). Let's explore this deeply.
Serial Number Profile Purpose:
It controls serialization (e.g., mandatory entry, stock check) and links to objects like equipment or materials.
Why Equipment Category?

The equipment category (e.g., "M" for machines) determines the type of equipment created when a serialized material is installed or tracked. In customizing (SPRO # Plant Maintenance # Master Data # Technical Objects # Serial Number), the serial number profile is assigned to an equipment category to define how serial numbers generate equipment records (e.g., automatically upon goods receipt).
Why Not the Others?
* Equipment class (A):Classes group equipment by characteristics, not assigned to serial profiles.
* Configuration profile (B):This is for configurable products, unrelated to serial numbers.
* Stock determination strategy (D):This controls stock selection, not serialization.
Example:
Serial profile "S001" is assigned to equipment category "M," ensuring that serialized pumps create equipment records of type "M."
"A serial number profile can be assigned to an equipment category to define the equipment type created for serialized objects."

**NEW QUESTION # 63**
What can you use to speed up the creation of new service contracts by reusing existing information?

- A. Service contract quotations
- B. Service order templates
- C. Service contract templates
- D. Product bundles

**Answer: C**

Explanation:
Creating service contracts in SAP S/4HANA Cloud Private Edition, Service can be time-consuming if done from scratch. To streamline this process, SAP provides tools to reuse existing data. The correct answer is service contract templates(Option D).
A service contract template is a predefined structure that includes standard data such as items, pricing conditions, billing plans, and service objects. When creating a new service contract, you can select a template and adapt it to the specific customer or scenario, significantly reducing manual entry and ensuring consistency.
* Service contract quotations (A):These are preliminary documents used to propose a contract to a customer, but they are not designed for reuse as templates for contract creation.
* Service order templates (B):These are used to standardize service orders, not service contracts, and thus do not apply here.
* Product bundles (C):These group products or services together but are not templates for creating contracts; they are more relevant to sales or service items.
"Service contract templates enable the rapid creation of new contracts by providing reusable structures with predefined data, such as items and conditions, which can be adjusted as needed."

**NEW QUESTION # 64**
.....

Are you preparing for the SAP certification recently? Maybe the training material at your hands is wearisome and dull for you to study. Here Exam4Free will give you a very intelligence and interactive C_TS470_2412 study test engine. C_TS470_2412 test engine can simulate the examination on the spot. As some statistics revealed, the bad result not only due to the poor preparation, but also the anxious mood. Now, our C_TS470_2412 Simulated Test engine can make you feel the actual test environment in advance. Besides, the high quality C_TS470_2412 valid exam dumps will help you prepare well. You can must success in the C_TS470_2412 real test.
