ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q122-Q127):

NEW QUESTION # 122

Which of the following ISA-99 (IEC 62443) Reference Model levels is named correctly?

Available Choices (select all choices that are correct)

- A. Level 1: Supervisory Control

- B. Level 2: Quality Control
- **C. Level 3: Operations Management**
- D. Level 4: Process

Answer: C

Explanation:

The ISA-99/IEC 62443 standards for industrial automation and control systems security categorize network and system components into different levels based on their operational context. The correct name from the provided options for one of these levels is Level 3: Operations Management. This level typically encompasses systems that manage production control systems, including batch management, production scheduling, and overall factory operations. The other levels listed, such as Supervisory Control and Process, refer to different aspects of the system but are not named correctly in the options provided. Level 1 is correctly referred to as

"Basic Control," and Level 4 should be "Business Logistics" instead of "Process."

NEW QUESTION # 123

What is the FIRST step required in implementing ISO 27001?

Available Choices (select all choices that are correct)

- **A. Perform a security risk assessment.**
- B. Create a security management organization.
- C. Define an information security policy.
- D. Implement strict security controls.

Answer: A

Explanation:

The first step in implementing ISO 27001, an international standard for information security management systems (ISMS), is to perform a security risk assessment. This initial step is critical as it helps identify the organization's information assets that could be at risk, assess the vulnerabilities and threats to these assets, and evaluate their potential impacts. This risk assessment forms the foundation for defining appropriate security controls and measures tailored to the organization's specific needs. Starting with a risk assessment ensures that the security controls implemented are aligned with the actual risks the organization faces, making the ISMS more effective and targeted.

ISA/IEC 62443 Cybersecurity Fundamentals References:

* Although ISO 27001 is not part of ISA/IEC 62443, it shares common principles in cybersecurity management by starting with a comprehensive understanding and assessment of security risks, which is a fundamental aspect in both standards for setting up effective security practices.

NEW QUESTION # 124

The Risk Analysis category contains background information that is used where?

Available Choices (select all choices that are correct)

- A. Only the Assessment element
- B. (Elements external to the CSMS)
- C. Many other elements in the CSMS
- **D. Only the Risk ID element**

Answer: D

NEW QUESTION # 125

What is a key activity in the Maintain phase?

- A. Risk assessment
- B. Designing cybersecurity countermeasures
- C. Allocating assets to security zones
- **D. Managing changes**

Answer: D

Explanation:

The "Maintain" phase is the fourth phase of the IACS Cybersecurity Lifecycle described in ISA/IEC 62443-2-

1. A key activity in this phase is managing changes (also known as "change management"). This activity ensures that any modifications to the IACS environment (hardware, software, processes, etc.) are evaluated for cybersecurity impact, and proper controls are implemented to maintain the intended security posture.

While risk assessment is typically done in the Assess phase, and allocating assets and designing countermeasures belong to earlier phases, managing changes is essential for ensuring ongoing compliance and effectiveness of cybersecurity controls over time.

Reference: ISA/IEC 62443-2-1:2009, Section 5.6 (Maintain Phase), Table 3 (CSMS lifecycle activities).

NEW QUESTION # 126

What is the primary purpose of Foundational Requirement 1 (FR 1)?

- A. Control use of selected devices.
- B. Respond to security violations.
- C. Ensure data confidentiality.
- **D. Control access to selected devices.**

Answer: D

Explanation:

Foundational Requirement 1 (FR 1) in the ISA/IEC 62443 series is titled "Identification and Authentication Control (IAC)". Its purpose is to control access to selected devices by ensuring that only authenticated and authorized users or systems can interact with critical IACS components.

"FR 1 - Identification and Authentication Control (IAC): This foundational requirement ensures that all users and components interacting with the system are uniquely identified and authenticated before access is granted."

- ISA/IEC 62443-3-3:2013, Clause 4.2.1 - FR 1

This foundational layer supports higher-level security goals like use control, confidentiality, and system integrity.
