P.S. Free & New CWNA-109 dumps are available on Google Drive shared by VCETorrent: [https://drive.google.com/open?id=1zoTkdybyJZIRSnWYE\\_LW3UGzuzvHqzCw](https://drive.google.com/open?id=1zoTkdybyJZIRSnWYE_LW3UGzuzvHqzCw)

Perhaps you do not understand. Anyway, what I want to tell you that our CWNA-109 exam questions can really help you pass the exam faster. Imagine how much chance you will get on your career path after obtaining an internationally certified CWNA-109 certificate! You will get a better job or get a big rise on the position as well as the salary. And we can claim that if you study with our CWNA-109 study materials for 20 to 30 hours, you will pass the exam with ease.

## CWNP CWNA-109 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>WLAN Protocols and Devices: It focuses on terminology related to the 802.11 MAC and PHY, the purpose of the three main 802.11 frame types, MAC frame format, and 802.11 channel access methods.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Radio Frequency (RF) Technologies: This topic explains the basic features and behavior of RF. It also discusses applying the basic concepts of RF mathematics and measurement. Lastly, the topic covers RF signal characteristics and the functionality of RF antennas.</li></ul>

- WLAN Regulations and Standards: The topic discusses the roles of WLAN and networking industry organizations. It also addresses the concepts of various Physical Layer (PHY) solutions, spread spectrum technologies, and 802.11 WLAN functional concepts.

## CWNP CWNA-109 Exam | Sure CWNA-109 Pass - Pass Guaranteed for CWNA-109: CWNP Wireless Network Administrator (CWNA) Exam

Choosing CWNP CWNA-109 study material means you choose an effective, smart, and fast way to succeed in your CWNA-109 exam certification. You will find explanations along with the answers where is necessary in the CWNA-109 actual test files. With the study by the CWNA-109 vce torrent, you will have a clear understanding of the CWNA-109 Valid Dumps. In addition, you can print the CWNA-109 pdf dumps into papers, thus you can do marks on the papers. Every time, when you review the papers, you will enhance your memory about the marked points. Be confident to attend your CWNA-109 exam test, you will pass successfully.

### CWNP Wireless Network Administrator (CWNA) Sample Questions (Q95-Q100):

#### NEW QUESTION # 95

You are attempting to locate the cause of a performance problem in two WLAN cells in a mostly overlapping coverage area. You note that one AP is on channel 1 and the other is on channel 2. When you document your findings, what term do you use to describe the problem in this configuration?

- A. CCC
- **B. CCI**
- C. ACI
- D. Non-Wi-Fi interference

**Answer: B**

#### NEW QUESTION # 96

A POE device requires 47 W of power. What POE specification should be used?

- **A. 802.3bt**
- B. 802.11at
- C. 802.3af
- D. 802.3at

**Answer: A**

Explanation:

A POE device that requires 47 W of power should use the 802.3bt specification. This is because 802.3bt is the latest POE standard that supports up to 90 W of power delivery over four pairs of wires in an Ethernet cable.

The previous POE standards, such as 802.3af and 802.3at, only support up to 15.4 W and 30 W of power delivery over two pairs of wires in an Ethernet cable, respectively. Therefore, they are not sufficient for powering a device that requires 47 W of power. The 802.11at specification does not exist; it is a typo or confusion with the 802.3at specification. References: CWNA-109 Study Guide, Chapter 8: Wireless LAN Access Points, page 2431

#### NEW QUESTION # 97

The BSA of an AP covers the area used by the sales and marketing department. Thirty-five stations operate in this space. The users indicate that they need more throughput and all stations are 5 GHz capable 802.11ac clients. The current AP configuration uses 20 MHz channels in both 2.4 GHz and 5 GHz. What is the least expensive solution available for increasing throughput for these users without implementing configuration options that are not recommended?

- A. Use a 160 MHz channel on the 5 GHz radio
- B. Install a second AP in the coverage area
- C. Use a 40 MHz channel on the 2.4 GHz radio
- **D. Use a 40 MHz channel on the 5 GHz radio**

**Answer: D**

Explanation:

The least expensive solution available for increasing throughput for these users without implementing configuration options that are not recommended is to use a 40 MHz channel on the 5 GHz radio. This solution can double the channel bandwidth and increase the data rates for the 5 GHz capable 802.11ac clients. Using a 40 MHz channel on the 5 GHz radio is also less likely to cause co-channel interference or overlap with other channels than using a 40 MHz channel on the 2.4 GHz radio, which has only three non-overlapping channels.

Using a 160 MHz channel on the 5 GHz radio may provide even higher throughput, but it may also consume too much of the available spectrum and cause more interference with other devices or networks. Installing a second AP in the coverage area may also improve the throughput, but it may require additional costs and configuration. ### NEW QUESTION # 98

Option 43 must be configured to allow access points to locate controllers. In what network service should this option be configured?

- A. LDAP
- B. DNS
- **C. DHCP**
- D. RADIUS

**Answer: C**

Explanation:

DHCP (Dynamic Host Configuration Protocol) is the network service where option 43 must be configured to allow access points to locate controllers. DHCP is a protocol that allows a device to obtain an IP address and other network configuration parameters from a server. In a wireless controller scenario, the access points can use DHCP to request an IP address from a DHCP server, which can also provide the IP address or hostname of the wireless controller as an option in the DHCP response. Option 43 is a vendor-specific option that can be used to encode custom information for different types of devices. For example, Cisco access points can use option 43 to receive the IP address of the wireless controller from the DHCP server, while Aruba access points can use option 43 to receive the hostname of the wireless controller from the DHCP server. This way, the access points can discover the wireless controller and establish a connection with it. References: 1, Chapter 8, page 309; 2, Section 5.2

### NEW QUESTION # 99

A non-802.11 device is suspected of causing interference on the WLAN. You are not certain of the location or type of device. What is the best solution for locating this non-802.11 device?

- A. Laptop-based spectrum analyzer with an omni-directional antenna
- B. Access point spectrum analyzer
- C. Laptop-based spectrum analyzer with an omni-directional antenna
- **D. Laptop-based spectrum analyzer with a directional antenna**

**Answer: D**

Explanation:

A laptop-based spectrum analyzer with a directional antenna is the best solution for locating a non-802.11 device that is suspected of causing interference on the WLAN. A spectrum analyzer is a device or a software application that can measure and display the frequency spectrum of electromagnetic signals in a given range.

A spectrum analyzer can show the amplitude, frequency, bandwidth, modulation, and other characteristics of different signals in the spectrum, which can help identify their sources and types. A spectrum analyzer can also detect non-802.11 devices that may cause interference on the WLAN, such as microwave ovens, cordless phones, Bluetooth devices, or radar systems. A laptop-based spectrum analyzer is a software application that runs on a laptop computer and uses an external USB adapter as its RF interface. A laptop-based spectrum analyzer has the advantage of being portable, flexible, and cost-effective compared to a hardware-based

spectrum analyzer. A directional antenna is an antenna that radiates or receives RF signals more strongly in one direction than in others. A directional antenna has a high gain and a narrow beamwidth, which means it can focus the RF energy in a specific direction and reduce the interference from other directions. A directional antenna can also increase the range and sensitivity of the RF signal detection. To locate a non-802.11 device that is causing interference on the WLAN, a laptop-based spectrum analyzer with a directional antenna can be used to perform a technique called RF hunting or triangulation. This technique involves pointing the directional antenna in different directions and observing the signal strength and characteristics of the interfering device on the spectrum analyzer. By moving around and changing the direction of the antenna, the location of the interfering device can be estimated based on where the signal strength is highest and most consistent.
