

# Latest GH-200 Test Prep & GH-200 Dump Torrent

P.S. Free & New GH-200 dumps are available on Google Drive shared by ActualTorrent: [https://drive.google.com/open?id=1W72ojgSUx8LLiVFFtbe\\_Q6BeflLaeA](https://drive.google.com/open?id=1W72ojgSUx8LLiVFFtbe_Q6BeflLaeA)

New GitHub Actions GH-200 study guide and latest learning materials and practice materials have been provide for customers. ActualTorrent is a good platform that has been providing reliable, true, updated, and free GitHub Actions GH-200 Exam Questions. The GitHub Actions GH-200 exam fee is affordable, in order to success in your career, you need to pass GitHub Actions exam.

## Microsoft GH-200 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Manage GitHub Actions in the Enterprise: This section measures the expertise of Enterprise Administrators and Platform Engineers in distributing and managing GitHub Actions and workflows at the organizational level. It includes reuse and sharing of templates, strategies for managing reusable components via repositories and naming conventions, controlling access to actions, setting organization-wide usage policies, and planning maintenance to ensure efficient enterprise-wide deployment of GitHub Actions.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>• <b>Author and Maintain Workflows:</b> This section of the exam measures skills of DevOps Engineers and Automation Specialists and covers building and managing workflows triggered by events such as pushes, scheduled times, manual triggers, and webhooks. It includes understanding workflow components like jobs, steps, actions, and runners, syntax correctness, environment variables, secrets management, and dependencies between jobs. Candidates will also demonstrate practical abilities to create workflows for various purposes, including publishing packages, using service containers, routing jobs, and deploying releases to cloud providers.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Consume Workflows:</b> This domain targets Software Developers and Quality Assurance Engineers and focuses on interpreting workflow runs and their outcomes. It covers identifying triggering events, reading workflow configurations, troubleshooting failures by analyzing logs, enabling debug logging, managing environment variables, caching dependencies, and passing data between jobs. Candidates also manage workflow runs, artifacts, approvals, and status badges, as well as locating workflows within repositories and leveraging organizational templated workflows.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Author and Maintain Actions:</b> This domain evaluates the abilities of Action Developers and Automation Engineers to select and create suitable types of GitHub Actions, such as JavaScript, Docker containers, or run steps. It emphasizes troubleshooting action code, understanding the components and file structures of actions, and using workflow commands within actions to communicate with runners, including exit code management.</li> </ul>

## GH-200 Dump Torrent - Customizable GH-200 Exam Mode

There has been fierce and intensified competition going on in the practice materials market. As the leading commodity of the exam, our GH-200 training materials have get pressing requirements and steady demand from exam candidates all the time. So our GH-200 Exam Questions have active demands than others with high passing rate of 98 to 100 percent. Don't doubt the pass rate, as long as you try our GH-200 study questions, then you will find that pass the exam is as easy as pie.

### Microsoft GitHub Actions Sample Questions (Q105-Q110):

#### NEW QUESTION # 105

Which action type should be used to bundle a series of run steps into a reusable custom action?

- A. Docker container action
- B. JavaScript action
- **C. Composite action**
- D. Bash script action

**Answer: C**

Explanation:

A composite action allows you to bundle multiple steps into a single reusable action within a workflow. It is composed of multiple run steps or other actions and can be reused across workflows, making it the perfect choice for bundling a series of steps.

#### NEW QUESTION # 106

Your organization needs to simplify reusing and maintaining automation in your GitHub Enterprise Cloud. Which components can be directly reused across all repositories in an organization? (Choose three.)

- A. self-hosted runners
- **B. encrypted secrets**
- C. custom Docker actions stored in GitHub Container Registry
- **D. actions stored in private repositories in the organization**
- **E. workflow templates**
- F. actions stored in an organizational partition in the GitHub Marketplace

**Answer: B,D,E**

Explanation:

Actions stored in private repositories within the organization can be reused across all repositories by referencing them in workflows. This ensures a centralized way of maintaining custom actions.

Encrypted secrets can be accessed across repositories in the same organization, making it easy to store sensitive data (like API keys or tokens) securely while allowing multiple workflows to access them.

Workflow templates allow you to create reusable templates for workflows that can be shared across repositories within the organization. This makes it easier to standardize processes and automate them across multiple projects.

### NEW QUESTION # 107

As a developer, you need to make sure that only actions from trusted sources are available for use in your GitHub Enterprise Cloud organization. Which of the following statements are true?

(Each correct answer presents a complete solution. Choose three.)

- A. Actions created by GitHub are automatically enabled and cannot be disabled.
- B. Individual third-party actions enabled with a specific tag will prevent updated versions of the action from introducing vulnerabilities.
- C. Actions can be published to an internal marketplace.
- D. Actions can be restricted to only those available in the enterprise.
- E. GitHub-verified actions can be collectively enabled for use in the enterprise.
- F. Specific actions can individually be enabled for the organization, including version information.

**Answer: C,E,F**

Explanation:

[A] Internal Actions Marketplace

The reason for having an internal actions marketplace is to have a central location for all the actions that can be used inside our production organization. This is to prevent any actions from the public marketplace from being used in our production organization, without being checked for security risks first.

[B] Allow Marketplace actions by verified creators: You can allow all GitHub Marketplace actions created by verified creators to be used by workflows. When GitHub has verified the creator of the action as a partner organization, the badge is displayed next to the action in GitHub Marketplace.

[C] You can enable specific actions for the organization by identifying them and providing version control, ensuring only trusted versions are used in workflows.

### NEW QUESTION # 108

Which files are required for a Docker container action in addition to the source code? (Each correct answer presents a partial solution. Choose two.)

- A. Dockerfile
- B. Actionfile
- C. action.yml
- D. metadata.yml

**Answer: A,C**

Explanation:

Creating a Docker container action

Create a dockerfile

Dockerfile support for GitHub Actions

When creating a Dockerfile for a Docker container action, you should be aware of how some Docker instructions interact with GitHub Actions and an action's metadata file.

Creating an action metadata file

Create a new action.yml file.

### NEW QUESTION # 109

Which default environment variable specifies the branch or tag that triggered a workflow?

- A. GITHUB\_BRANCH
- **B. GITHUB\_REF**
- C. GITHUB\_TAG
- D. ENV\_BRANCH

**Answer: B**

Explanation:

GITHUB\_REF : The branch or tag ref that triggered the workflow.
