

Juniper JN0-253 Valid Exam Pattern & JN0-253 Valid Test Cost

What's more, part of that Actual4Exams JN0-253 dumps now are free: <https://drive.google.com/open?id=1q3DRTt59wemlV5awvqQbzOeMwGVOW4C5>

Do you want to pass JN0-253 certification exam easily? Then it is necessary to have Actual4Exams JN0-253 exam certification training materials. Actual4Exams JN0-253 test training materials are summarized by IT experts with constant practice, which is the combination of JN0-253 Exam Dumps and answers, and can't be matched by any JN0-253 test training materials from others. Actual4Exams will take you to a more beautiful future.

Juniper Certification evolves swiftly, and a practice test may become obsolete within weeks of its publication. We provide free updates for Mist AI, Associate (JNCIA-MistAI) JN0-253 exam questions after the purchase to ensure you are studying the most recent solutions. Furthermore, Actual4Exams is a very responsible and trustworthy platform dedicated to certifying you as a specialist. We provide a free sample before purchasing Juniper JN0-253 valid questions so that you may try and be happy with its varied quality features.

Use Desktop Juniper JN0-253 Practice Test Software To Identify Gaps In Knowledge

Our company employs the first-rate expert team which is superior to others both at home and abroad. Our experts team includes the experts who develop and research the JN0-253 study materials for many years and enjoy the great fame among the industry, the senior lecturers who boost plenty of experiences in the information about the exam and published authors who have done a deep research of the JN0-253 Study Materials and whose articles are highly authorized. They provide strong backing to the compiling of the JN0-253 study materials and reliable exam materials resources. They compile each answer and question carefully.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q52-Q57):

NEW QUESTION # 52

How do Wireless Assurance SLEs help administrators troubleshoot?

- A. They manage Juniper Mist subscriptions.
- **B. They set benchmarks for network performance and user experiences.**
- C. They help streamline the onboarding process.
- D. They customize the Guest User portal.

Answer: B

Explanation:

In Juniper Mist AI, Wireless Assurance Service Level Expectations (SLEs) are designed to provide AI-driven visibility into user experience and network performance. Each SLE represents a specific aspect of the end-user journey - such as Time to Connect, Throughput, Coverage, Roaming, Capacity, and Application Experience.

According to the Juniper Mist documentation, SLEs "define measurable benchmarks for user experience and identify where deviations occur." This allows administrators to quickly determine whether issues stem from client devices, access points, wired uplinks, or WAN connectivity. When an SLE metric falls below its threshold, Mist AI automatically highlights the affected classifier (for example, DHCP, DNS, or Wi-Fi interference) and provides root-cause correlation through AI-driven insights.

This data-driven approach enables administrators to troubleshoot proactively by focusing on user-impacting areas instead of raw device statistics. Thus, Wireless Assurance SLEs act as experience-based benchmarks that simplify troubleshooting, improve performance visibility, and shorten mean time to repair (MTTR).

NEW QUESTION # 53

What are two user roles that you are allowed to assign to a new account? (Choose two.)

- **A. network admin**
- B. root
- C. guest
- **D. installer**

Answer: A,D

Explanation:

Installer: The installer role is designed for users who need access to configure and deploy Mist devices. This role typically has the necessary permissions to set up and manage devices but with limited access to other administrative functions.

Network Admin: The network admin role provides comprehensive access to manage network settings, monitor performance, and configure policies. This role is essential for users responsible for the overall network administration and maintenance.

NEW QUESTION # 54

Which statement is correct when a subscription expires?

- **A. The devices remain operational, but you are not allowed to manage the devices using the Mist management GUI.**
- B. The devices remain operational, and all functionality remains available for a one-year grace period.
- C. The devices become inactive and unreachable through the Mist management GUI.
- D. The devices remain operational, but the Mist management GUI functionality related to expired subscriptions is hidden from the user.

Answer: A

Explanation:

When a Mist subscription expires, the devices associated with that subscription continue to operate normally, ensuring there is no immediate disruption to network operations. However, management capabilities through the Mist management GUI are restricted. This means that while the devices remain functional, you cannot make configuration changes, monitor, or manage them using the Mist management interface until the subscription is renewed. This restriction emphasizes the importance of maintaining active subscriptions for full access to Mist's management features.

NEW QUESTION # 55

What is the purpose of Audit Logs in Juniper Mist?

- A. to record administrative activities
- B. to record key performance events
- C. to record security alerts
- D. to record SLE violations

Answer: A

Explanation:

The purpose of Audit Logs in Juniper Mist is to record administrative activities within the Mist dashboard.

According to the official Juniper Mist documentation: "Audit Logs provide a detailed chronological record of each configuration change, administrative action, and user activity within the Mist Cloud portal. These logs include information such as the action performed (e.g., adding or removing sites, devices, or users), the timestamp, and the user who performed the action. Audit Logs are critical for accountability, compliance, and troubleshooting, enabling administrators to trace changes and ensure that only authorized users are making modifications to their network settings. Mist stores audit log records securely and makes them accessible for review by organization administrators from the dashboard's Organization > Audit Logs section." This directly aligns with option C, as the logs primarily track configuration changes and administrative actions-not performance events, security alerts, or SLE violations. Such activities include site creation, modification, device assignment, role changes, and other user or configuration updates.

NEW QUESTION # 56

You are troubleshooting a wireless client's issue and you suspect it is related to DHCP latency. In this scenario, which SLE should you review in the Mist UI?

- A. Time to Connect
- B. Throughput
- C. Capacity
- D. Coverage

Answer: A

Explanation:

Identify the Problem: Suspected issue related to DHCP latency while troubleshooting a wireless client.

Understanding SLEs:

Capacity: Related to the number of clients and bandwidth. Time to Connect: Measures the time taken for clients to connect, including DHCP latency.

Throughput: Measures the data transfer rate.

Coverage: Measures the signal strength and coverage area.

Selecting the Appropriate SLE:

Time to Connect is the relevant SLE as it includes metrics on DHCP latency, which affects the connection time.

Review the SLE:

Analyze the Time to Connect SLE to identify any latency issues with DHCP.

NEW QUESTION # 57

.....

Our JN0-253 training materials provide 3 versions to the client and they include the PDF version, PC version, APP online version. Each version's using method and functions are different but the questions and answers of our JN0-253 study materials is the same. The client can decide which JN0-253 version to choose according their hobbies and their practical conditions. For instance, the PDF version is convenient for reading and supports the printing of our JN0-253 Study Materials. If client uses the PDF version of JN0-253 learning questions, you can also put on notes on it.
