NEW QUESTION # 48

A common WDM service can be converted into an ODUk SNCP service. However, an ODUk SNCP service will be interrupted when it is converted into a common WDM service.

- A. TRUE
- B. FALSE

Answer: A

Explanation:

A common WDM service can be converted into an ODUk SNCP (Subnetwork Connection Protection) service. However, when an ODUk SNCP service is converted back into a common WDM service, the protection is interrupted, causing service disruption. This is because SNCP provides path-level protection with automatic switching, which is lost during conversion back to a simpler WDM configuration. HCIP- Transmission highlights this limitation in protection mechanisms when migrating between service types, important for network planning and service continuity management.

NEW QUESTION # 49

Which of the following descriptions about optical line protection and ODUk SNCP protection is wrong?

- A. The switching time of optical line protection and ODUk SNCP protection is less than 50 ms. In order to avoid cable disconnection, multiple switching is triggered, and the two protections cannot coexist
- B. Optical line protection is switched by the OLP board, and ODUk SNCP protection is switched by the cross-connect board
- C. Optical line protection and ODUk SNCP protection are both single-ended switching. When a single fiber fails, the sending and receiving routes will be inconsistent
- D. Optical line protection belongs to network-level protection, and ODUk SNCP belongs to service-level protection

Answer: A
