Authoritative AWS-Solutions-Architect-Associate Latest Exam Test, Latest AWS-Solutions-Architect-Associate Test Preparation

We are not only offering you the best AWS-Solutions-Architect-Associate torrent VCE but also the foremost customer service. If you search for the best high pass-rate study materials, our AWS-Solutions-Architect-Associate practice test questions will be your best select. Please rest assured that your money and information will be strictly protected and safe on our website. You have no need to worry anything while purchasing. After purchasing our products you can get 100%-pass-rate AWS-Solutions-Architect-Associate Real Questions to help you pass exam immediately at first attempt. Choosing our products will be your cleaver action for clearing AWS-Solutions-Architect-Associate exam.

To earn the AWS Certified Solutions Architect - Associate certification, candidates must pass the AWS-Solutions-Associate exam, which covers a variety of topics related to AWS architecture and services. AWS-Solutions-Architect-Associate exam is designed to test the candidate's knowledge of AWS services, their ability to identify and define requirements for AWS-based applications, and their ability to deploy and manage scalable and fault-tolerant systems on AWS.

The AWS-Solutions-Associate exam consists of multiple-choice questions and is designed to test the candidate's understanding of various AWS services, including compute, storage, databases, networking, security, and more. AWS-Solutions-Architect-Associate Exam also covers topics such as AWS architecture, deployment, and management, as well as best practices for designing and deploying applications on AWS.

Latest AWS-Solutions-Architect-Associate Test Preparation, AWS-Solutions-Architect-Associate Reliable Test Blueprint

With all types of AWS-Solutions-Architect-Associate test guide selling in the market, lots of people might be confused about which one to choose. Many people can't tell what kind of AWS-Solutions-Architect-Associate study dumps and software are the most suitable for them. Our company can guarantee that our AWS-Solutions-Architect-Associate Actual Questions are the most reliable. Having gone through about 10 years' development, we still pay effort to develop high quality AWS-Solutions-Architect-Associate study dumps and be patient with all of our customers, therefore you can trust us completely.

Amazon AWS-Solutions-Architect-Associate (AWS Certified Solutions Architect - Associate (SAA-C02)) Exam is a certification exam that validates the skills and knowledge of individuals who design and deploy scalable systems on Amazon Web Services (AWS) platform. AWS-Solutions-Architect-Associate Exam measures the candidate's ability to define and deploy secure and robust applications on AWS, as well as the candidate's understanding of AWS architectural principles and services.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q288-Q293):

NEW QUESTION # 288

A company that uses AWS needs a solution to predict the resources needed for manufacturing processes each month. The solution must use historical values that are currently stored in an Amazon S3 bucket The company has no machine learning (ML) experience and wants to use a managed service for the training and predictions.

Which combination of steps will meet these requirements? (Select TWO.)

- A. Configure an AWS Lambda function with a function URL that uses Amazon SageMaker endpoints to create predictions based on the inputs.
- B. Use Amazon SageMaker to train a model by using the historical data in the S3 bucket.
- C. Train an Amazon Forecast predictor by using the historical data in the S3 bucket.
- D. Configure an AWS Lambda function with a function URL that uses an Amazon Forecast predictor to create a prediction based on the inputs.
- E. Deploy an Amazon SageMaker model. Create a SageMaker endpoint for inference.

Answer: B,C

Explanation:

To predict the resources needed for manufacturing processes each month using historical values that are currently stored in an Amazon S3 bucket, a solutions architect should use Amazon SageMaker to train a model by using the historical data in the S3 bucket, and deploy an Amazon SageMaker model and create a SageMaker endpoint for inference. Amazon SageMaker is a fully managed service that provides an easy way to build, train, and deploy machine learning (ML) models. The solutions architect can use the built-in algorithms or frameworks provided by SageMaker, or bring their own custom code, to train a model using the historical data in the S3 bucket as input. The trained model can then be deployed to a SageMaker endpoint, which is a scalable and secure web service that can handle requests for predictions from the application. The solutions architect does not need to have any ML experience or manage any infrastructure to use SageMaker.

NEW QUESTION # 289

A company is designing an advertisement distribution application to run on AWS. The company wants to deploy the application as a container to Amazon Elastic Container Service (Amazon ECS).

Advertisements must be displayed to users around the world with low latency. The company needs to optimize data transfer costs. Which solution will meet these requirements?

- A. Deploy the application in multiple AWS Regions. Create an Application Load Balancer (ALB) in each Region. Use Amazon Route 53 with a latency-based weighted routing policy to distribute traffic to the ALBs.
- B. Deploy the application in a single AWS Region. Use an Application Load Balancer (ALB) to distribute traffic. Create an accelerator in AWS Global Accelerator. Associate the accelerator with the ALB.
- C. Deploy the application in multiple AWS Regions. Create an Application Load Balancer (ALB) in each Region. Create a transit gateway in each Region. Route traffic between the ALBs and Amazon ECS through the transit gateways.
- D. Deploy the application in a single AWS Region. Use an Application Load Balancer (ALB) to distribute traffic. Create an Amazon CloudFront distribution, and set the ALB as the origin.

Answer: D

Explanation:

Using Amazon CloudFront in front of an ALB in a single region is a cost-effective way to deliver content with low latency across the globe. CloudFront caches content closer to the users, reducing the load on backend servers and minimizing data transfer costs by serving cached content from edge locations.

Compared to Global Accelerator, CloudFront is significantly more cost-optimized for static and dynamic content delivery. Multi-region deployments increase infrastructure and transfer costs, which violates the optimization goal. Therefore, option A provides the best mix of performance and cost efficiency.

NEW QUESTION # 290

A company is building a critical ingestion service on AWS that will receive 1,000 incoming events per second. The events must be processed in order, and no events may be lost. Multiple applications will need to process each event. The company will expose the service as RESTful calls through an API Gateway.

What should a Solutions Architect use to receive the events based on these requirements?

- A. Amazon SNS
- B. Amazon DynamoDB

- C. Amazon SQS
- D. Amazon Kinesis Data Stream

Answer: D

NEW QUESTION # 291
What is an isolated database environment running in the cloud (Amazon RDS) called?

- A. DB Unit
- B. DB Volume
- C. DB Instance
- D. DB Server

Answer: C

NEW QUESTION # 292
Your company is storing millions of sensitive transactions across thousands of 100-GB files that must be encrypted in transit and at rest. Analysts concurrently depend on subsets of files, which can consume up to 5 TB of space, to generate simulations that can be used to steer business decisions. You are required to design an AWS solution that can cost effectively accommodate the long-term storage and in-flight subsets of data.

- A. Use HDFS on Amazon Elastic MapReduce (EMR), and run simulations on subsets in-memory on Amazon Elastic Compute Cloud (EC2).
- B. Use Amazon S3 with server-side encryption, and run simulations on subsets in-memory on Amazon EC2.
- C. Store the full data set in encrypted Amazon Elastic Block Store (EBS) volumes, and regularly capture snapshots that can be cloned to EC2 workstations.
- D. Use HDFS on Amazon EMR, and run simulations on subsets in ephemeral drives on Amazon EC2.
- E. Use Amazon Simple Storage Service (S3) with server-side encryption, and run simulations on subsets in ephemeral drives on Amazon EC2.

Answer: A
