Free UiPath-ADPv1 Sample - New UiPath-ADPv1 Test Fee

We can say that how many the UiPath-ADPv1 certifications you get and obtain qualification certificates, to some extent determines your future employment and development, as a result, the UiPath-ADPv1 exam guide is committed to helping you become a competitive workforce, let you have no trouble back at home. Actually, just think of our UiPath-ADPv1 Test Prep as the best way to pass the UiPath-ADPv1 exam is myopic. They can not only achieve this, but ingeniously help you remember more content at the same time.

UiPath UiPath-ADPv1 Exam Syllabus Topics:

Topic	Details
Topic 1	• UiPath Studio Fundamentals: In this section, the focus is given to the understanding of Robotic Process Automation (RPA) concepts; it covers UiPath Studio and its components, Working with the UiPath user interface, project creation, management, and version control.
Topic 2	• UiPath Activities: In this section, the discussion is related to various UiPath activities for UI interaction, data manipulation, control flow, and more.

| Topic 3	• Design and Development: This section covers designing workflows using sequences, flowcharts, and state machines, building reusable components with libraries, exception handling and debugging techniques, etc.
Topic 4	• Debugging and Testing: This section is about utilizing logging and debugging tools and adopting unit testing and test automation strategies.

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q56-Q61):

NEW QUESTION # 56

A developer wants to add items to a list of strings using the Invoke Method activity. The list is declared as follows:
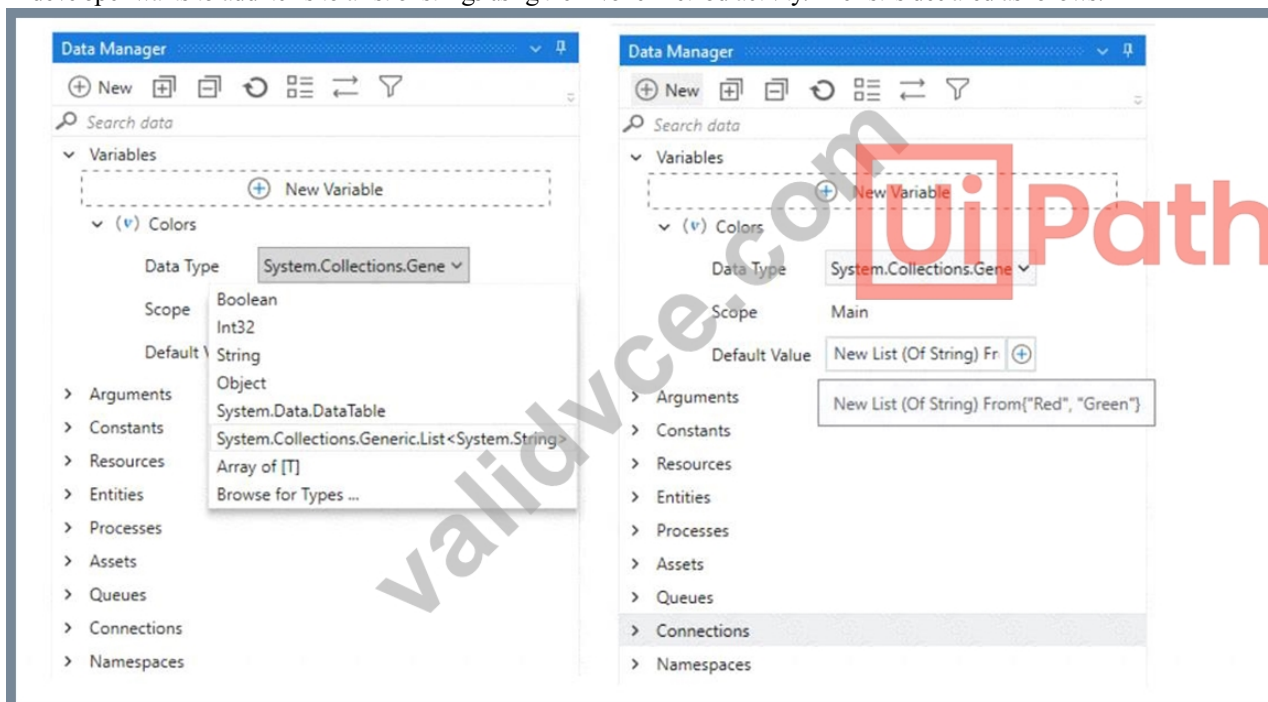

The Invoke Method includes the following properties:
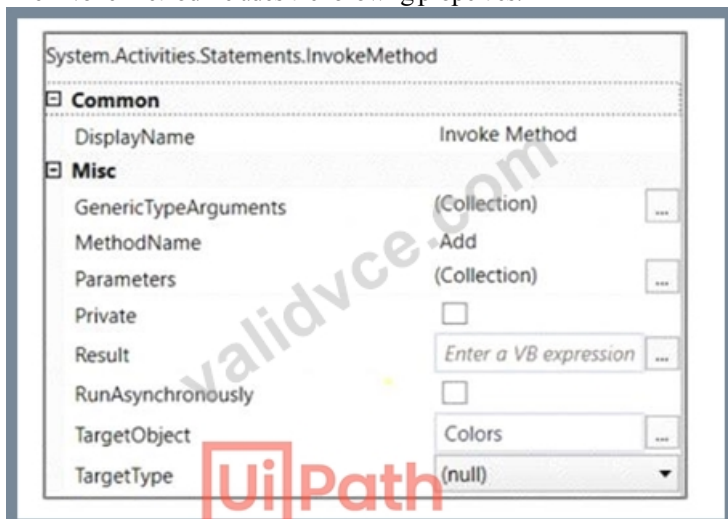

The Invoke Method includes the following properties:

Based on the exhibits, what is the outcome of this Invoke Method activity?

- A. Colors will contain items in the following order: "Red", "Green".
- B. Colors will contain items in the following order: "Yellow", "Red", "Green".
- C. Colors will contain items in the following order: "Red", "Green", "Yellow".
- D. Invoke Method activity will throw an error.

Answer: C

Explanation:
Based on the exhibits provided, the developer has set up an Invoke Method activity to add an item to the
"Colors" list variable. The list is initially declared with two items "Red" and "Green". The Invoke Method activity is configured to add
the string "Yellow" to this list.
The properties of the Invoke Method activity indicate that the method 'Add' will be called on the target object
'Colors' with the parameter "Yellow". This means the string "Yellow" will be added to the end of the list.
The outcome of executing this Invoke Method activity will be:
D: Colors will contain items in the following order: "Red", "Green", "Yellow".
This is because items in a List<T> in .NET are added in sequence, and the "Add" method appends the new item to the end of the list.

NEW QUESTION # 57
What are the five severity levels of Orchestrator alerts?

- A. Info, Completed. Warning, Error. Fatal.
- B. Information, Complete. Warning, Error, Failure.
- C. Info, Success, Warn, Error, Fatal.
- D. Info. Success. Warning. Error. Critical.

Answer: C

Explanation:
Orchestrator alerts are real-time notifications related to robots, queue items, triggers, and more. Alerts can have one of the following severity levels, which indicate the importance and impact of the events1:
Info - notifies you about low importance events, that do not interrupt the process execution, such as robots becoming available, users being assigned as reviewers, etc.
Success - notifies you about a successful status, such as a job being completed, a queue item being processed, etc.
Warn - notifies you about possible risky events that may interrupt your process execution, but any interruption can be recovered, such as queue items failing with business exceptions, triggers not being able to create new jobs, etc.
Error - notifies you about imminent risky events that prevent the process from executing successfully, such as jobs failing, robots not responding, queue items failing with application exceptions, etc.
Fatal - notifies you about events that force-stop the process execution, such as robots going offline or being disconnected, etc.
Option A is the correct answer, as it lists the five severity levels of Orchestrator alerts as defined in the documentation1. Option B is incorrect, because there is no Critical severity level, but rather Fatal. Option C is incorrect, because there are no Information, Complete, or Failure severity levels, but rather Info, Success, and Fatal. Option D is incorrect, because there are no Completed or Fatal severity levels, but rather Success and Fatal.

NEW QUESTION # 58

When automating the process of entering values into a web form, requiring each field to be brought to the foreground, which property of the Type Into activity should be adjusted to achieve this?

- A. Delay before
- B. Input Element
- C. Activate
- D. Selector

Answer: C

Explanation:
The Type Into activity is used to send keystrokes to a UI element, such as a text box1. The activity has several properties that can be adjusted to achieve different behaviors and results1. One of these properties is the Activate property, which determines whether the specified UI element is brought to the foreground and activated before the text is written1. By default, this property is not selected, which means that the activity will type into the current active window1. However, if the property is selected, the activity will first make sure that the target UI element is visible and focused, and then type the text1. Therefore, if the automation process requires each field to be brought to the foreground, the Activate property of the Type Into activity should be adjusted to achieve this

NEW QUESTION # 59

How would you define a linear process in UiPath?

- A. The steps of the process refer to the execution of steps in a sequential manner, where each subsequent step depends on the successful completion of the previous step.
- B. The steps of the process are performed multiple times, but each time different data items are used.
- C. The process steps are performed only once. If the need is to process additional data, then the automation must execute again.
- D. The steps of the process repeat multiple times over different data items. However, the automation design is such that each repeatable part processes independently.

Answer: C

NEW QUESTION # 60

Which logging level includes the following information by default?
1. Execution Started log entry - generated every time a process is started.
2. Execution Ended log entry - generated every time a process is finalized.
3. Transaction Started log entry - generated every time a transaction item is obtained by the robot from Orchestrator.
4. Transaction Ended log entry - generated every time the robot sets the transaction status to either Success or Failed.
5. Activity Information log entry - generated every time an activity is started, faulted or finished inside a workflow.
6. Arguments and Variables Information log entry - show values of the variables and arguments that are used.

- A. Information
- B. Verbose
- C. Critical
- D. Trace

Answer: B
