### NEW QUESTION # 169

Refer to the exhibit.

```
FortiGate # diagnose test application fgtlogd 4
Queues in all miglogds: cur:31 total-so-far:4642589
global log dev statistics:
faz=180191781, faz_cloud=0, fds_log=0
faz 0: sent=180189698, failed=4507, cached=0, dropped=0
```

Based on the output, what can you conclude about the FortiAnalyzer logging status?

- A. FortiGate is sending logs again after it performed a reboot.
- **B. FortiGate has logs to send, but FortiAnalyzer is unavailable.**
- C. FortiGate is configured to send logs in batches.
- D. The connection between FortiGate and FortiAnalyzer is overloaded.

**Answer: B**

Explanation:

The output shows that FortiGate has sent a large number of logs (sent=180189698), but some logs have failed to be sent (failed=4507). This suggests that FortiAnalyzer was temporarily unavailable or had an issue receiving logs, leading to the failure count. There are no logs cached or dropped, indicating FortiGate is still attempting to send logs but with some failures.

### NEW QUESTION # 170

Which two statements are true regarding fabric connectors? (Choose two.)

- A. The storage connector service does not require a separate license to send logs to the cloud platform.
- **B. Fabric connectors allow you to save storage costs and improve redundancy.**
- C. Cloud-out connectors allow you to send real-time logs to public cloud accounts like Amazon S3.
- **D. Using fabric connectors is more efficient than third-party polling information from the FortiAnalyzer API**

**Answer: B,D**

Explanation:

Using fabric connectors is more efficient than third-party polling information from the FortiAnalyzer API - Fabric connectors are designed to integrate directly with the security fabric components and other services, which allows them to operate more efficiently compared to using third-party applications to poll information via APIs. APIs often involve more overhead due to the need for frequent polling and data retrieval operations, which can be resource-intensive.

Cloud-out connectors allow you to send real-time logs to public cloud accounts like Amazon S3. - Cloud- out connectors are specifically designed to facilitate the direct and real-time transfer of logs and other data to cloud services like Amazon S3. These connectors streamline the process by providing a built-in mechanism that bypasses the need for additional scripting or manual configuration.

What are analytics logs on FortiAnalyzer?

- A. Logs classified as type Traffic, or type Security
- B. Logs that are compressed and saved to a log file
- C. Logs that roll over when the log file reaches a specific size
- D. Logs that are indexed and stored in the SQL

**Answer: D**

Explanation:

On FortiAnalyzer, analytics logs refer to the logs that have been processed, indexed, and then stored in the SQL database. This process allows for efficient data retrieval and analytics. Unlike basic log storage, which might involve simple compression and storage in a file system, analytics logs in FortiAnalyzer undergo an indexing process. This enables advanced features such as quick search, report generation, and detailed analysis, making it easier for administrators to gain insights into network activities and security incidents.
