- B. Perpetual agreement
- C. Promotional agreement
- D. Enterprise agreement

**Answer: C**

### NEW QUESTION # 227

For which of the following reasons is the infrastructure as code technique used?

- A. To capture the system configurations to track changes and remediate configuration drift.
- B. To assign server administration responsibilities to software developers for application deployments.
- C. To specify the hardware configuration and system installation procedures in machine-readable formats.
- D. To improve the ability to migrate applications to different cloud providers to avoid vendor lock-in.

**Answer: A**

Explanation:

Infrastructure as code (IaC) is a software engineering approach that allows the provisioning and management of infrastructure resources using code and automation<sup>1</sup>. It involves defining infrastructure configurations and provisioning them through code, rather than manually configuring and managing infrastructure resources<sup>2</sup>. One of the main reasons for using IaC is to capture the system configurations to track changes and remediate configuration drift<sup>3</sup>. Configuration drift is the phenomenon where the actual state of an infrastructure resource deviates from its desired state over time due to manual interventions, updates, patches, or other factors. Configuration drift can cause inconsistencies, errors, and security issues in the infrastructure environment. IaC helps to prevent and detect configuration drift by storing the infrastructure configuration code in a version control system and applying it consistently across all environments. IaC also enables the use of automated testing and validation tools to verify the compliance and functionality of the infrastructure resources. By using IaC, DevOps teams can ensure that the infrastructure is always in a known and reproducible state, and that any changes are documented and traceable.
