Updated EMEA-Advanced-Support Demo & EMEA-Advanced-Support Latest Mock Test

The Fortinet EMEA-Advanced-Support certification differentiates you from other professionals in the market. Success in the Fortinet EMEA-Advanced-Support exam shows that you have demonstrated dedication to understanding and advancing in your profession. Cracking the Fortinet EMEA-Advanced-Support test gives you an edge which is particularly essential in today's challenging market of information technology. If you are planning to get through the test, you must study from reliable sources for Fortinet EMEA Advanced Support Exam EMEA-Advanced-Support Exam Preparation. Real4exams real Fortinet EMEA-Advanced-Support exam dumps are enough to clear the EMEA-Advanced-Support certification test easily on the first attempt. This is because Real4exams Fortinet EMEA-Advanced-Support PDF Questions and practice test is designed after a lot of research and hard work carried out by experts.

Fortinet EMEA Advanced Support Exam Sample Questions (Q48-Q53):

NEW QUESTION # 48

Which FortiGate log type records denied traffic events?

- A. System Log
- B. Event Log
- C. Security Log
- **D. Traffic Log**

Answer: D

Explanation:

Traffic Logs in FortiGate record all traffic events, including denied packets, with details like source, destination, and policy ID. Security Logs (B) cover UTM events, Event Logs (C) system events, and System Logs (D) hardware or system status, not specifically denied traffic. Exact extract: "Traffic Logs record all packet activity, including allowed and denied traffic, with details such as source/destination IPs, ports, and the firewall policy applied."

NEW QUESTION # 49

Which statement is true about IPsec VPNs and SSL VPNs?

- A. Both SSL VPNs and IPsec VPNs are standard protocols
- B. SSL VPN creates a HTTPS connection. IPsec does not
- C. Either a SSL VPN or an IPsec VPN can be established between an end-user workstation and a FortiGate device
- **D. All of the above**

Answer: D

Explanation:

Both SSL VPN and IPsec VPN are standard protocols supported by FortiGate devices for secure remote access. SSL VPN typically uses HTTPS (TCP port 443) for encrypted communication, while IPsec uses protocols like IKE and ESP. Both can be configured between an end-user workstation (e.g., via FortiClient) and a FortiGate device, supporting various authentication methods. All options are correct, making D the correct answer. Exact extract: "SSL VPN technology uses the standard SSL/TLS protocol to provide a secure connection to the FortiGate unit. The FortiGate SSL VPN can be configured to use HTTPS..." and "IPsec VPNs use standardized protocols like IKE and ESP to create secure tunnels... FortiClient supports both IPsec and SSL VPN connections to FortiGate devices for remote access."

NEW QUESTION # 50

Which of the following are request methods in HTTP?

- A. RETR
- **B. HEAD**
- **C. GET**
- D. LIST

Answer: B,C

Explanation:

HTTP defines standard request methods, including GET (retrieve a resource) and HEAD (retrieve headers only). LIST and RETR are not standard HTTP methods; RETR is used in FTP, and LIST is not a recognized method in either protocol. The original document incorrectly lists only A, omitting C. Exact extract: "HTTP supports several request methods, including GET, HEAD, POST, PUT, DELETE, etc... GET retrieves a resource, while HEAD retrieves only the headers without the body content."

NEW QUESTION # 51

What happens when a FortiGate detects a SYN flood attack?

- A. It enables proxy-based inspection
- **B. It applies rate limiting to SYN packets**
- C. It drops all incoming packets
- D. It redirects traffic to a backup gateway

Answer: B

Explanation:

When FortiGate detects a SYN flood attack, it applies rate limiting to SYN packets via a DoS policy, dropping excessive packets to mitigate the attack. It does not drop all packets (A), enable proxy inspection (B), or redirect traffic (D). Exact extract: "FortiGate mitigates SYN flood attacks using DoS policies, which apply rate limiting to SYN packets to prevent overwhelming the system."

NEW QUESTION # 52

Which parts of the IKE protocol below are responsible for authenticating the User (username/password) of a dialup IPsec tunnel? (Check all correct answers)

- A. IKEv2 SA_INIT
- B. IKEv1 phase2
- C. IKEv2 EAP
- D. IKEv1 phase1
- E. IKEv1 Xauth

Answer: C,E

Explanation:

For user authentication in dialup IPsec, IKEv1 uses XAuth (Extended Authentication) after Phase 1 for username/password. IKEv2 uses EAP (Extensible Authentication Protocol) for similar user auth. Phase 1 and SA_INIT are for peer auth, Phase 2 for child SA negotiation. Exact extract: XAuth increases security by requiring remote dialup client users to authenticate in a separate exchange at the end of phase 1. IPsec IKEv2 VPNs now support certificate authentication and EAP authentication at the same time from a dialup FortiClient. With the eap-cert-auth setting ... IPsec IKEv2 VPNs now support certificate authentication and EAP authentication at the same time from a dialup FortiClient. IPsec IKEv1 uses XAUTH for user authentication, and IPsec IKEv2 uses EAP for user authentication. Only EAP-TTLS is interoperable with LDAP. For LDAP based user ... In your scenario, the user cannot authenticate by providing both a PSK and their credentials (using one of multiple EAP methods).

NEW QUESTION # 53

.....

Without complex collection work and without no such long wait, you can get the latest and the most trusted EMEA-Advanced-Support exam materials on our website. The different versions of our dumps can give you different experience. There is no doubt that each version of the EMEA-Advanced-Support Materials is equally effective. To instantly purchase our EMEA-Advanced-Support exam materials with the safe payment PayPal, you can immediately download it to use.
