## CHFM Sample Questions Pdf & Certification CHFM Exam Infor

The VCE4Dumps guarantees their customers that if they have prepared with Certified Healthcare Facility Manager (CHFM)

certification exam practice test, they can pass the Certified Healthcare Facility Manager (CHFM) certification exam (CHFM) certification easily. If the applicants fail to do it, they can claim their payment back according to the terms and conditions. Many candidates have prepared from the actual Medical Professional CHFM Practice Questions and rated them as the best to study for the examination and pass it in a single try with the best score.

## Medical Professional Certified Healthcare Facility Manager (CHFM) certification exam Sample Questions (Q65-Q70):

### NEW QUESTION # 65

What is the required fire rating of a door in a 2-hour rated wall assembly?

- A. 1 1/2 hours
- B. 1/2 hour
- C. 1 hour
- D. 2 hours

**Answer: A**

Explanation:

NFPA opening-protective tables specify that doors protecting openings in 2-hour fire-resistance-rated fire barriers are required to have a 1-1/2-hour (90-minute) fire protection rating. This distinction between the wall's fire-resistance rating and the door's fire-protection rating is standard in NFPA 101 and NFPA 80.

References:

NFPA 101: Life Safety Code - Table for opening protective ratings in fire-resistance-rated assemblies.

NFPA 80: Standard for Fire Doors and Other Opening Protectives - Fire door rating requirements for 2-hour barriers.

AHA/CHFM Exam Content Outline - Compliance domain (Life Safety Code requirements).

### NEW QUESTION # 66

According to The Joint Commission Emergency Management Standards, a facility must

- A. establish agreements with utility, equipment, and supply vendors to provide support in order to maintain operations for 96 hours.
- B. maintain inventories of critical supplies in sufficient quantities to maintain operations for 96 hours.
- C. provide utilities, equipment, and supplies in order to maintain operations for 96 hours.
- D. evaluate capabilities and response efforts for the organization to maintain operations for 96 hours.

**Answer: D**

Explanation:

The Joint Commission Emergency Management Standards require organizations to evaluate their capabilities and plan for how they would maintain operations during an emergency for up to 96 hours. This does not mandate stockpiling or guaranteeing resources for that duration, but rather ensuring that the facility has assessed its resources, strategies, and agreements to maintain patient care and safety during prolonged emergency conditions.

Incorrect Options:

A and B: Maintaining actual supplies/utilities for 96 hours is not specifically required.

C: Agreements with vendors may be part of the plan but are not the mandated standard.

References:

The Joint Commission: Emergency Management (EM) Standards - 96-hour sustainment requirement.

AHA/ASHE CHFM Review Materials - Compliance domain: Emergency preparedness and response.

CHFM Candidate Handbook - Compliance domain outlines emergency management as a tested area.

### NEW QUESTION # 67

At the end of an 8-hour electrical shutdown, after the maintenance work is completed but before the cabinets are closed up or the system re-energized, a final inspection should be completed by individuals who have

- A. "fresh eyes" and go/no go authority.
- B. gathered feedback and attended the lessons learned debriefing.
- C. working knowledge of the generators and switch gear.

- D. been involved since the beginning of the shutdown.

**Answer: A**

Explanation:

Best practice in safety and risk management is to have a final inspection performed by individuals with "fresh eyes" and go/no-go authority. Those directly involved may overlook issues due to task familiarity.

Independent inspection reduces risk before re-energization.

References: NFPA 70E (Electrical Safety in the Workplace); AHA/ASHE recommended practices; CHFM Handbook - Administration and Compliance domains.

### **NEW QUESTION # 68**

Where a required fire alarm system is out of service for more than 4 hours in a 24-hour period, which of the following is required according to NFPA Life Safety Codes?

Notify the authority having jurisdiction.

Provide an approved fire watch for all parties left unprotected by the shutdown.

Notify the building administrator.

Notify the fire alarm service company for repair.

- A. 1 and 3 only
- B. 3 and 4 only
- **C. 1 and 2 only**
- D. 2 and 4 only

**Answer: C**

Explanation:

NFPA 101 (Life Safety Code, Section 9.6.1.6) requires that when a fire alarm system is out of service for more than 4 hours in a 24-hour period, the facility must (1) notify the authority having jurisdiction (AHJ) and (2) provide an approved fire watch until the system is restored. Internal notifications such as to administrators or vendors may occur, but the code specifically mandates AHJ notification and fire watch.

References: NFPA 101, Section 9.6.1.6; CHFM Candidate Handbook - Compliance domain.

### **NEW QUESTION # 69**

In accordance with The Joint Commission's Emergency Management Chapter, which of the following is one of the most effective tools to plan an emergency response exercise?

- **A. HVA**
- B. ILSM
- C. ICRMR
- D. PCRA

**Answer: A**

Explanation:

The Hazard Vulnerability Analysis (HVA) is the primary tool recommended by The Joint Commission (TJC) for planning emergency response exercises. It allows facilities to identify, assess, and prioritize potential hazards and then plan drills and exercises accordingly.

C). HVA (Correct): Standard TJC requirement for developing emergency exercises.

A). ILSM (Interim Life Safety Measures): Used during construction or when life safety features are impaired, not for emergency planning.

B). PCRA (Pre-Construction Risk Assessment): Focuses on infection control and safety risks during construction.

D). ICRMR: Not a recognized TJC tool.
