With the Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam InsuranceSuite-Analyst Exam Questions, you will get the opportunity to download the updated and real Associate Certification -

## Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q70-Q75):

### NEW QUESTION # 70

What features have been added to InsuranceSuite to make it more accessible to disabled users that Business Analysts should consider when making changes to the User Interface? (Choose two)

- A. Screen reader support with Alt text and WAI-ARIA attributes
- B. User interface support with closed captions for the hearing impaired
- C. New screen settings for user interface magnification and color contrast
- D. Braille keyboard support for the visually impaired

**Answer: A,C**

Explanation:

Guidewire InsuranceSuite includes several accessibility enhancements designed to support users with disabilities and align with modern accessibility standards. Business Analysts must be aware of these features when defining or modifying UI requirements to ensure accessibility is preserved.

One key enhancement is user interface magnification and color contrast settings (Option B). These features support users with visual impairments by allowing them to adjust screen readability without altering business functionality.

Another critical capability is screen reader support using Alt text and WAI-ARIA attributes (Option D).

These standards enable assistive technologies to interpret UI elements correctly, ensuring users who rely on screen readers can navigate and interact with the application effectively.

The other options are incorrect. Braille keyboard support (Option A) and closed-caption UI support (Option C) are not standard InsuranceSuite features.

Considering accessibility early helps analysts design inclusive solutions, avoid rework, and comply with accessibility regulations and best practices.

### NEW QUESTION # 71

Select each phase of the project lifecycle that reference User Story Cards in some manner: choose two

- A. Deployment
- B. Support and Success
- C. Pre-Inception
- D. Inception

**Answer: C,D**

Explanation:

Comprehensive and Detailed Explanation:

In the Guidewire Project Lifecycle, User Story Cards (or the high-level concepts that become them) are primarily utilized in Pre-Inception and Inception.

\* Inception (Option D): This is the primary phase where User Story Cards are created, elaborated, and finalized. The main goal of Inception is to generate the "Backlog" of detailed user stories that describe the system behavior (business rules, UI, integration) and to have them estimated by developers.

\* Pre-Inception (Option A): During the Pre-Inception phase, the team defines the project scope and value. While they may not have fully detailed "cards" yet, they utilize the User Story format (e.g., "Epics" or "Key User Stories") to define the high-level requirements and the Minimum Viable Product (MVP). These high-level stories are "referenced" to estimate the project size and create the initial roadmap.

Why other options are incorrect:

\* B. Support and Success: While User Stories are indeed used during Support (for enhancements and defects), "Support" is typically considered the Operational lifecycle, distinct from the Project (Implementation) lifecycle (as confirmed in Question 21 where "Maintenance" was not a project phase).

\* C. Deployment: The Deployment phase focuses on the technical migration of the confirmed software (code and data) to the Production environment. While the "Release Notes" might reference stories, the phase itself is driven by the Deployment Plan and Runbook, not the elaboration or definition of Story Cards.

### NEW QUESTION # 72

Why is it important for non-developers to have a basic understanding of the data model?

- A. It helps them determine whether a field exists in the out-of-the-box product
- B. It helps them complete product configuration
- C. It helps them know the underlying data when documenting change requests
- D. It is necessary for analysts writing configuration scripts

**Answer: A,C**

Explanation:

A basic understanding of the Guidewire data model is essential for non-developers, especially Business Analysts, to effectively document requirements and evaluate change requests. The correct answers are Options B and C.

Understanding the data model helps analysts determine whether a field already exists in the out-of-the-box product (Option B). This knowledge prevents unnecessary customization and supports Guidewire's configure-over-customize principle.

It also enables analysts to understand the underlying data structure when documenting change requests (Option C). Analysts who understand entities, relationships, and field types can write clearer requirements and anticipate downstream impacts.

Non-developers are not responsible for writing configuration scripts or completing product configuration, making Options A and D incorrect.

### NEW QUESTION # 73

Guidewire Marketplace is a website designed for browsing and downloading \_\_\_\_\_ and product add-ons.

- A. User story cards
- B. Accelerators
- C. End-user documentation
- D. Detailed requirements documentation

**Answer: B**

Explanation:

The Guidewire Marketplace is an ecosystem designed to help customers and partners accelerate implementations and extend product capabilities. The primary content available for browsing and downloading includes accelerators and product add-ons, making Option D the correct answer.

Accelerators available on the Marketplace include pre-built integrations, tools, templates, utilities, and solution components that address common insurance implementation needs. These assets are designed to reduce implementation time, lower risk, and promote reuse of proven solutions across Guidewire projects.

The Marketplace does not host user story cards (Option A), detailed requirements documentation (Option C), or end-user documentation (Option B). Those resources are typically found within SurePath collateral, project tools, or the Guidewire Education Marketplace.

For analysts, understanding the Marketplace is important because accelerators can influence solution design decisions, reduce the need for custom development, and support faster delivery while remaining aligned with Guidewire standards.

### NEW QUESTION # 74

Which team members are part of the Three Amigos meeting? (Select two)

- A. Business Analyst
- B. Project Manager
- C. Scrum Master
- D. Quality Analyst
- E. Subject Matter Expert

**Answer: A,D**

Explanation:

The Three Amigos meeting is a key Agile practice used in Guidewire projects to clarify user stories before development begins. It ensures shared understanding across execution roles and reduces defects caused by misinterpretation.

Two of the required participants in a Three Amigos session are the Business Analyst and the Quality Analyst, making Options A and B correct.

The Business Analyst represents business intent and functional requirements. They explain the user story, business rules, validations, and expected behavior.

The Quality Analyst represents the testing perspective. They focus on acceptance criteria, edge cases, and how the story will be validated to determine when it is "done." While Developers are typically the third "Amigo" in practice, they are not listed as an option in this question.

The Project Manager and Scrum Master facilitate delivery but do not play the execution-focused role of an Amigo. Subject Matter Experts provide input during elaboration but are not core participants in Three Amigos sessions.

## NEW QUESTION # 75

.....

Our InsuranceSuite-Analyst study guide offers you more than 99% pass guarantee. And we believe you will pass the InsuranceSuite-Analyst exam just like the other customers. At the same time, if you want to continue learning, InsuranceSuite-Analyst guide torrent will provide you with the benefits of free updates within one year and a discount of more than one year.
