Reliable Microsoft AZ-400 Exam Bootcamp & AZ-400 Valid Test Tutorial

It is impossible to pass AZ-400 exam without efforts and time, but our Real4exams team will try our best to reduce your burden when you are preparing for AZ-400 exam. The normal model test and understandable answer analysis will make you secretly master the exam skills to pass AZ-400 exam. In order to reduce more stress for you, we promise you if you fail the exam, what you need to do is to send your scanned unqualified transcripts to our email box. After confirmation, we will immediately refund all the money that you purchased the AZ-400 Exam Materials. Real4exams is worthy your trust.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q178-Q183):

NEW QUESTION # 178
You are designing a YAML template for use with Azure Pipelines. The template Will include the Outputfile parameter.

Which two methods can you use to reference the parameter? Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.

- A. Option A
- B. Option E
- C. Option B
- D. Option D
- E. Option C

Answer: D,E

NEW QUESTION # 179
You need to configure a cloud service to store the secrets required by the mobile applications to call the share.
What should you include in the solution? To answer, select the appropriate options m the answer area, NOTE:
Each correct selection is worth one point.

Answer:

Explanation:
Explanation:
Every request made against a storage service must be authorized, unless the request is for a blob or container resource that has been made available for public or signed access. One option for authorizing a request is by using Shared Key.
Scenario: The mobile applications must be able to call the share pricing service of the existing retirement fund management system.
Until the system is upgraded, the service will only support basic authentication over HTTPS.
The investment planning applications suite will include one multi-tier web application and two iOS mobile application. One mobile application will be used by employees; the other will be used by customers.
References: https://docs.microsoft.com/en-us/rest/api/storageservices/authorize-with-shared-key

NEW QUESTION # 180
Your company plans to implement a new compliance strategy that will require all Azure web apps to be backed up every five hours.
You need to back up an Azure web app named az400-11566895-main every five hours to an Azure Storage account in your resource group.
To complete this task, sign in to the Microsoft Azure portal.

Answer:

Explanation:
With the storage account ready, you can configure backs up in the web app or App Service.
Open the App Service az400-11566895-main, which you want to protect, in the Azure Portal and browse to Settings > Backups.
Click Configure and a Backup Configuration blade should appear.
Select the storage account.
Click + to create a private container. You could name this container after the web app or App Service.
Select the container.
If you want to schedule backups, then set Scheduled Backup to On and configure a schedule: every five hours Select your retention.
Note that 0 means never delete backups.
Decide if at least one backup should always be retained.
Choose if any connected databases should be included in the web app backup.
Click Save to finalize the backup configuration.

NEW QUESTION # 181
You have an Azure subscription that contains the resources shown in the following table.
Project1 produces 9pm packages that are published to Feed1. Feed1 is consumed by multiple projects.
You need to ensure that only tested packages are available for consumption. The solution must minimize development effort.
What should you do?

- A. Create a feed view named @release and set @release as the default view After the 9pm packages test successfully, configure a release pipeline that promotes a package to the @release view.
- B. Create a feed view named @default. After the 9pm packages test successfully, configure a release pipeline that promotes a package to the @default view.
- C. Create a feed view named @default. After the 9pm packages test successfully, configure a release pipeline that tags the packages as release.
- D. Create a feed view named @release and set @release as the default view. After the 9pm packages test successfully, configure a release pipeline that tags the packages as release.

Answer: A

Explanation:
By creating a feed view named "release" and setting it as the default view, packages that are published to the feed will not be immediately available for consumption. After the 9pm packages are tested successfully, you can configure a release pipeline that promotes a package to the @release view. This ensures that only tested packages are available for consumption and minimizes development effort as it doesn't require any additional steps to be taken by the consumer of the feed.

NEW QUESTION # 182
Your company is building a new solution in Java.
The company currently uses a SonarQube server to analyze the code of .NET solutions.
You need to analyze and monitor the code quality of the Java solution.
Which task types should you add to the build pipeline?

- A. Gradle
- B. Octopus
- C. Gulp
- D. Chef

Answer: A

Explanation:
Explanation
SonarQube is a set of static analyzers that can be used to identify areas of improvement in your code. It allows you to analyze the technical debt in your project and keep track of it in the future. With Maven and Gradle build tasks, you can run SonarQube analysis with minimal setup in a new or existing Azure DevOps Services build task.
