Salesforce Certified Data Architect Sample Questions (Q208-Q213):

NEW QUESTION # 208

UC has been using SF for 10 years. Lately, users have noticed, that the pages load slowly when viewing Customer and Account list view.

To mitigate, UC will implement a data archive strategy to reduce the amount of data actively loaded.

Which 2 tasks are required to define the strategy? Choose 2 answers:

- A. Identify the recovery point objective.
- B. Identify the recovery time objective.
- C. Identify the data retention requirements
- D. Identify how the archive data will be accessed and used.

Answer: C,D

NEW QUESTION # 209

DreamHouse Realty has a data model as shown in the image. The Project object has a private sharing model, and it has Roll-Up summary fields to calculate the number of resources assigned to the project, total hours for the project, and the number of work items associated to the project.

There will be a large amount of time entry records to be loaded regularly from an external system into Salesforce.

What should the Architect consider in this situation?

- A. Load all data after deferring sharing calculations.
- B. Load all data using external IDs to link to parent records.
- C. Calculate summary values instead of Roll-Up by using triggers.

- D. Calculate summary values instead of Roll-Up by using workflow.

Answer: A

NEW QUESTION # 210

Cloud Kicks currently has a Public Read/Write sharing model for the company's Contacts. Cloud Kicks management team requests that only the owner of a contact record be allowed to delete that contact.

What should an Architect do to meet these requirements?

- A. Check if the current user is NOT the owner by creating a "before delete" trigger.
- B. Check if the current user is NOT the owner by creating a validation rule on the Contact object.
- C. Set the profile of the users to remove delete permission from the Contact object.
- D. Set the Sharing settings as Public Read Only for the Contact object.

Answer: A

NEW QUESTION # 211

During the implementation of Salesforce, a customer has the following requirements for Sales Orders:

1. Sales Order information needs to be shown to users in Salesforce.
2. Sales Orders are maintained in the on-premises enterprise resource planning (ERP).
3. Sales Order information has more than 150 million records.
4. Sales Orders will not be updated in Salesforce.

What should a data architect recommend for maintaining Sales Orders in Salesforce?

- A. Use Standard order object to maintain Sales Orders in Salesforce
- B. Use custom objects to maintain Sales Orders in Salesforce.
- C. Use custom big objects to maintain Sales Orders in Salesforce.
- D. Use external objects to maintain Sales Order in Salesforce.

Answer: D

NEW QUESTION # 212

To address different compliance requirements, such as general data protection regulation (GDPR), personally identifiable information (PII), of health insurance Portability and Accountability Act (HIPPA) and others, a SF customer decided to categorize each data element in SF with the following:

Data owner

Security Level, such as confidential

Compliance types such as GDPR, PII, HIPPA

A compliance audit would require SF admins to generate reports to manage compliance.

What should a data architect recommend to address this requirement?

- A. Use field metadata attributes for compliance categorization, data owner, and data sensitivity level.
- B. Build reports for field information, then export the information to classify and report for Audits.
- C. Create a custom object and field to capture necessary compliance information and build custom reports.
- D. Use metadata API, to extract field attribute information and use the extract to classify and build reports

Answer: A

NEW QUESTION # 213

.....

Please don't worry about the purchase process because it's really simple for you. The first step is to select the Data-Architect test guide, choose your favorite version, the contents of different version are the same, but different in their ways of using.
