Palo Alto Networks Network Security Analyst Pass4sure Test - NetSec-Analyst Pdf Vce & NetSec-Analyst Latest Reviews

Candidates who pass NetSec-Analyst Certification prove their worth in the Palo Alto Networks field. The Palo Alto Networks Network Security Analyst certification is proof of their competence and skill. This skill is highly useful in big Palo Alto Networks companies that facilitate a candidate's career. To get certified, it is very important that you pass the Palo Alto Networks Network Security Analyst certification exam to prove your skills to the tech company. For this task, you require high-quality and accurate prep material to help you out. And many people don't get reliable material and ultimately fail. Failure leads to a loss of time and money.

Palo Alto Networks Network Security Analyst Sample Questions (Q49-Q54):

NEW QUESTION # 49

Starting with PAN-OS version 9.1, application dependency information is now reported in which two locations? (Choose two.)

- A. on the Objects > Applications browser pages
- B. on the Policy Optimizer's Rule Usage page
- C. on the App Dependency tab in the Commit Status window

Answer: A,C

NEW QUESTION # 50

Which two options does the firewall use to dynamically populate address group members? (Choose two.)

- A. Tags
- B. Tag-based filters
- C. IP Addresses
- D. MAC Addresses

Answer: A,B

Explanation:

A dynamic address group populates its members dynamically using look ups for tags and tag-based filters. Tags are metadata elements or attribute-value pairs that are registered for each IP address. Tag-based filters use logical and and or operators to match the tags and determine the membership of the dynamic address group. For example, you can create a dynamic address group that includes all IP addresses that have the tags "web-server" and "linux". You can also use static tags as part of the filter criteria.

Reference: Policy Object: Address Groups, Use Dynamic Address Groups in Policy, Statics vs. Dynamic Address Objects Groups

NEW QUESTION # 51

Match the cyber-attack lifecycle stage to its correct description.

□

Answer:

Explanation:

□

NEW QUESTION # 52

You are deploying a new application in a segmented network behind a Palo Alto Networks firewall. The application consists of a web frontend (10.0.30.10) in the 'Web' zone and a database backend (10.0.40.20) in the 'DB' zone. The web frontend needs to connect to the database. Due to a legacy application requirement, the web frontend is hardcoded to connect to 'db.internal.com', which resolves to 172.16.1.1. You cannot reconfigure the web application. Your task is to use NAT to redirect traffic from 10.0.30.10 destined for 172.16.1.1 to the actual database server at 10.0.40.20. Which of the following NAT policy configurations would correctly achieve this, assuming appropriate security policies exist?

- A. This scenario requires GlobalProtect for VPN-based access to the database, not NAT.
- B. □
- C. □
- D. □
- E. □

Answer: B

Explanation:

The core problem is that the web frontend sends traffic to a 'dummy' IP (172.16.1.1) that needs to be redirected to the actual database IP (10.0.40.20). This is a classic use case for Destination NAT (DNAT). The firewall needs to intercept packets from 10.0.30.10 going to 172.16.1.1 and change their destination to 10.0.40.20.

Let's break down Option A:

- NAT Type: Destination NAT: Correct, as we are changing the destination of the packet.

- Original Packet: This describes what the firewall sees coming in. The source is 10.0.30.10 (from the 'Web' zone), and it's trying to reach 172.16.1.1, with the intent to go to the 'DB' zone. So, Source Zone: Web, Destination Zone: DB, Source Address: 10.0.30.10, Destination Address: 172.16.1.1 are all correct.

- Translated Packet: This describes how the firewall changes the packet. We want the destination to become 10.0.40.20. So, Translated Destination Address: 10.0.40.20 is correct.

Options C and D are less specific ('any' for destination zone or source/destination zone), which might lead to unintended NAT for other traffic.

Option B is a Source NAT, which changes the source IP, not the destination, and is completely incorrect for this scenario. Option E is irrelevant.

NEW QUESTION # 53

Which update option is not available to administrators?

- A. New URLs
- B. New Antivirus Signatures
- C. New Application Signatures
- D. New Malicious Domains
- E. New Spyware Notifications

Answer: A

NEW QUESTION # 54

.....

The NetSec-Analyst prep torrent we provide will cost you less time and energy. You only need relatively little time to review and prepare. After all, many people who prepare for the NetSec-Analyst exam, either the office workers or the students, are all busy. But the NetSec-Analyst test prep we provide are compiled elaborately and it makes you use less time and energy to learn and provide the NetSec-Analyst Study Materials of high quality and seizes the focus the NetSec-Analyst exam. It lets you master the most information and costs you the least time and energy.
